
LUC CS Course Handbook

Release 1.0

CS Department

October 23, 2015

CONTENTS

1	Schedules	3
1.1	Spring 2016 Schedule (Widescreen/Table Format)	3
1.2	Spring 2016 Schedule (Mobile/Single Column Format)	12
1.3	Fall 2015 Schedule (Widescreen/Table Format)	34
1.4	Fall 2015 Schedule (Mobile/Single Column Format)	45
1.5	Summer 2015 Schedule	63
1.6	COMP Courses Long-Term Schedule	63
1.7	Old Schedule Archive	67
2	Undergraduate Degree Programs	69
2.1	B.S. in Bioinformatics	69
2.2	B.S. in Communication Networks and Security	69
2.3	B.S. in Computer Science	71
2.4	B.S. in Mathematics and Computer Science	73
2.5	B.S. in Physics and Computer Science	74
2.6	B.S. in Information Technology	76
2.7	B.S. in Software Engineering	78
2.8	B.S./M.S. Dual Degree Programs	80
2.9	Minor in Information Technology	82
2.10	Minor in Computer Science	83
2.11	Minor in Computer Crime and Forensics	83
3	Undergraduate Courses	85
3.1	COMP 102: Web Design and Multimedia Publishing	85
3.2	COMP 104: Computer Animation	85
3.3	COMP 111: History of Computing	86
3.4	COMP 120: Introduction to Computer Applications	87
3.5	COMP 122: Introduction to Digital Music	88
3.6	COMP 125: Visual Information Processing	88
3.7	COMP 150: Introduction to Computing	89
3.8	COMP 163: Discrete Structures	90
3.9	COMP 170: Introduction to Object-Oriented Programming	91
3.10	COMP 171: Scripting Languages	92
3.11	COMP 215: Object-Oriented Programming with Mathematics	93
3.12	COMP 250: Introduction to Scientific and Technical Communication	94
3.13	COMP 251: Introduction to Database Systems	94
3.14	COMP 264: Introduction to Computer Systems	95
3.15	COMP 266: Digital Electronics Laboratory	96
3.16	COMP 271: Data Structures	96
3.17	COMP 300: Data Warehousing and Data Mining	97
3.18	COMP 305: Database Administration	98

3.19	COMP 309: Numerical Methods	99
3.20	COMP 312: Free/Open Source Computing	99
3.21	COMP 313: Intermediate Object-Oriented Development	100
3.22	COMP 314/315: Problem Solving Strategies	101
3.23	COMP 317: Social, Legal, and Ethical Issues in Computing	102
3.24	COMP 319: Introduction to Unix	103
3.25	COMP 320: Software Systems Analysis	104
3.26	COMP 322: Software Development for Wireless/Mobile Devices	105
3.27	COMP 324: Client-Side Web Development	105
3.28	COMP 328: Algebraic Coding Theory	106
3.29	COMP 330: Software Engineering	107
3.30	COMP 331: Cryptography	107
3.31	COMP 333: Formal Methods in Software Engineering	108
3.32	COMP 336: Markup Languages	109
3.33	COMP 337: Introduction to Concurrency	110
3.34	COMP 338: Server-Based Software Development	111
3.35	COMP 339: Distributed Systems	111
3.36	COMP 340: Computer Forensics	112
3.37	COMP 341: Human-Computer Interaction	113
3.38	COMP 343: Introduction to Computer Networks	113
3.39	COMP 344: Web Services Programming	114
3.40	COMP 346: Introduction to Telecommunications	115
3.41	COMP 347: Intrusion Detection and Computer Forensics	116
3.42	COMP 348: Network Security	116
3.43	COMP 349: Wireless Networks and Security	117
3.44	COMP 351: Network Management	118
3.45	COMP 353: Database Programming	119
3.46	COMP 356: Computer Principles of Modeling & Simulation	119
3.47	COMP 362: Computer Architecture	120
3.48	COMP 363: Design and Analysis of Computer Algorithms	121
3.49	COMP 364: High-Performance Computing	122
3.50	COMP 366: Microcomputer Design and Interfacing	122
3.51	COMP 370: Software Quality, Metrics, and Testing	123
3.52	COMP 372: Programming Languages	124
3.53	COMP 373: Objects, Frameworks, and Patterns	124
3.54	COMP 374: Introduction to Operating Systems	126
3.55	COMP 376: Formal Languages and Automata	126
3.56	COMP 377: IT Project Management	127
3.57	COMP 378: Artificial Intelligence	128
3.58	COMP 379: Machine Learning	128
3.59	COMP 380: Introduction to Computer Graphics	129
3.60	COMP 381: Bioinformatics	130
3.61	COMP 382: Introduction to Compilers	131
3.62	COMP 383: Computational Biology	131
3.63	COMP 384: Metagenomics	132
3.64	COMP 386: Computational Neuroscience	133
3.65	COMP 388: Topics in Computer Science	133
3.66	COMP 388: Foundations of Computer Science 1	134
3.67	COMP 388: Foundations of Computer Science 2	135
3.68	COMP 390: Broadening Participation in STEM (Computing, Math & Science)	135
3.69	COMP 391: Internship in Computer Science	136
3.70	COMP 397: Research Seminar	137
3.71	COMP 398: Independent Study	138
3.72	COMP 399: Computer Science Seminar	139

3.73	ISOM 349: Project Management	139
4	Graduate Degree Programs	141
4.1	Masters Programs Overview	141
4.2	Masters Programs Prerequisites	142
4.3	M.S. in Computer Science	145
4.4	M.S. in Information Technology	148
4.5	M.S. in Software Engineering	150
4.6	M.A. in Digital Humanities	151
5	Graduate Courses	153
5.1	COMP 409: Advanced Numerical Analysis	153
5.2	COMP 410: Operating Systems	154
5.3	COMP 411: Computer Systems Administration	155
5.4	COMP 412: Free/Open Source Computing	155
5.5	COMP 413: Intermediate Object-Oriented Development	156
5.6	COMP 417: Social, Legal, and Ethical Issues in Computing	158
5.7	COMP 418: Combinatorial Mathematics	158
5.8	COMP 420: Software Systems Analysis	159
5.9	COMP 421: Mathematical Modeling and Simulation	160
5.10	COMP 422: Software Development for Wireless/Mobile Devices	161
5.11	COMP 424: Client-Side Web Design	161
5.12	COMP 428: Algebraic Coding Theory	162
5.13	COMP 431: Cryptography	163
5.14	COMP 433: Web Services Programming	164
5.15	COMP 434: Enterprise Software Development	164
5.16	COMP 436: Markup Languages	165
5.17	COMP 437: Concurrent Programming	166
5.18	COMP 439: Distributed Systems	166
5.19	COMP 441: Human-Computer Interface Design	167
5.20	COMP 442: Server-Side Software Development	168
5.21	COMP 443: Computer Networks	169
5.22	COMP 446: Telecommunications	169
5.23	COMP 447: Intrusion Detection and Computer Forensics	170
5.24	COMP 448: Network Security	171
5.25	COMP 449: Wireless Networks and Security	171
5.26	COMP 450: Microcomputer Design and Interfacing	172
5.27	COMP 451: Network Management	173
5.28	COMP 453: Database Programming	173
5.29	COMP 460: Algorithms and Complexity	174
5.30	COMP 462: Computer Architecture	174
5.31	COMP 464: High-Performance Computing	175
5.32	COMP 471: Programming Languages	176
5.33	COMP 472: Compiler Construction	177
5.34	COMP 473: Object-Oriented Programming	178
5.35	COMP 474: Software Engineering	179
5.36	COMP 475: System Standards and Requirements	179
5.37	COMP 476: Formal Languages and Automata	180
5.38	COMP 477: IT Project Management	181
5.39	COMP 480: Computer Graphics	182
5.40	COMP 484: Artificial Intelligence	183
5.41	COMP 488: Topics in Computer Science	183
5.42	COMP 490: Independent Project	184
5.43	COMP 499: Internship	185

5.44	COMP 605: Master of Science Study	185

SCHEDULES

1.1 Spring 2016 Schedule (Widescreen/Table Format)

The following courses will (tentatively) be held during the Spring 2016 semester.

For classroom locations and open/full status, see [LOCUS](#).

Note: While we update this page regularly, please check [LOCUS](#) for the most recent information.

In case of conflict, information on LOCUS should be considered authoritative.

1.1.1 QuickLinks

- [Spring 2016 Schedule \(Mobile/Single Column Format\)](#)
- [Undergraduate Courses](#)
- [Graduate Courses](#)
- [CSIS Courses](#)

1.1.2 Undergraduate Courses

COMP 111: History of Computing

Section	Instructor	Time	Day(s)	Campus	Note
01W	George Thiruvathukal	11:30 AM - 12:20 PM	MWF	Lakeshore	N/A

COMP 125: Visual Information Processing

Section	Instructor	Time	Day(s)	Campus	Note
1	Channah Naiman	1:00 PM - 2:15 PM	TTr	Lakeshore	N/A
2	Guy Bevente	7:00 PM - 9:30 PM	Tr	Lakeshore	N/A

COMP 150: Introduction to Computing

Section	Instructor	Time	Day(s)	Campus	Note
1	Andrew N Harrington	2:30 PM - 4:00 PM	T	Lakeshore	See note ¹
2	TBD	7:00 PM - 9:30 PM	W	Lakeshore	N/A
3	Heather E. Wheeler	12:10 PM - 1:25 PM	MW	Lakeshore	N/A

Notes**COMP 163: Discrete Structures**

Section	Instructor	Time	Day(s)	Campus	Note
1	TBD	2:45 PM - 4:00 PM	MW	Lakeshore	N/A
2	TBD	4:15 PM - 5:30 PM	MW	Lakeshore	N/A

COMP 170: Introduction to Object-Oriented Programming

Section	Instructor	Time	Day(s)	Campus	Note
1	Robert Yacobellis	10:00 AM - 11:15 AM	TTr	Lakeshore	N/A
2	Dmitriy Dligach	10:25 AM - 11:40 AM	MW	Lakeshore	N/A
3	Maria Del Carmen Saenz	6:00 PM - 8:30 PM	T	Lakeshore	N/A
4	Dmitriy Dligach	12:10 PM - 1:25 PM	MW	Lakeshore	N/A
01L	Robert Yacobellis	11:30 AM - 11:55 AM	TTr	Lakeshore	N/A
02L	Dmitriy Dligach	10:25 AM - 11:15 AM	F	Lakeshore	N/A
03L	Maria Del Carmen Saenz	8:30 PM - 9:20 PM	T	Lakeshore	N/A
04L	Dmitriy Dligach	12:35 PM - 1:25 PM	F	Lakeshore	N/A

COMP 250: Introduction to Scientific and Technical Communication

Section	Instructor	Time	Day(s)	Campus	Note
01W	Roxanne Schwab	2:45 PM - 4:00 PM	MW	Lakeshore	N/A
02W	Roxanne Schwab	7:00 PM - 9:30 PM	M	Lakeshore	N/A

¹ Harrington's section: This class has run successfully both face to face and online, with the same content. This blended format takes advantage of face-to-face in initially getting to know each other, getting the class going, finding partners, and getting direct help with any online technology. Later, since the class is flipped, and most all interaction is help on your individual computer work, help can come online, either in part of regular class time or at varied times convenient to you and the instructor. We will use software to share screens online. A quiet place is important for online help, with a computer that you have access to having good Internet speed and with the ability to talk and listen online.

COMP 264: Introduction to Computer Systems

Section	Instructor	Time	Day(s)	Campus	Note
1	Ronald I Greenberg	9:20 AM - 10:10 AM	MWF	Lakeshore	N/A

COMP 271: Data Structures

Section	Instructor	Time	Day(s)	Campus	Note
1	Catherine Putonti	2:30 PM - 3:45 PM	TTr	Lakeshore	N/A
2	Catherine Putonti	4:15 PM - 6:45 PM	W	Lakeshore	N/A
01L	Catherine Putonti	3:45 PM - 4:05 PM	TTr	Lakeshore	N/A
02L	Catherine Putonti	7:00 PM - 7:50 PM	W	Lakeshore	N/A

COMP 300: Data Warehousing and Data Mining

Section	Instructor	Time	Day(s)	Campus	Note
1	Channah Naiman	4:15 PM - 6:45 PM	W	Water Tower	N/A
2	Channah Naiman	TBD	TBD	Online	²

Notes**COMP 305: Database Administration**

Section	Instructor	Time	Day(s)	Campus	Note
1	Peter L Dordal	4:15 PM - 6:45 PM	T	Water Tower	N/A

COMP 312: Free/Open Source Computing

Section	Instructor	Time	Day(s)	Campus	Note
01E	TBD	7:00 PM - 9:30 PM	W	Water Tower	N/A

COMP 313: Intermediate Object-Oriented Development

Section	Instructor	Time	Day(s)	Campus	Note
1	Robert Yacobellis	1:00 PM - 2:15 PM	TTr	Lakeshore	N/A

²This class is a totally online asynchronous course. Exams may be synchronous. Combined with COMP 488-302.

COMP 317: Social, Legal, and Ethical Issues in Computing

Section	Instructor	Time	Day(s)	Campus	Note
1	Matthew Paul Butcher	TBD	TBD	On-line	³
01W	Roxanne Schwab	7:00 PM - 9:30 PM	M	Lakeshore	N/A

Notes**COMP 319: Introduction to Unix**

Section	Instructor	Time	Day(s)	Campus	Note
1	Jose Luis Gahete Diaz	1:40 PM - 2:30 PM	F	Lakeshore	N/A

COMP 324: Client-Side Web Development

Section	Instructor	Time	Day(s)	Campus	Note
1	Nicholas J Hayward	4:15 PM - 6:45 PM	M	Water Tower	N/A

COMP 330: Software Engineering

Section	Instructor	Time	Day(s)	Campus	Note
1	George Thiruvathukal	6:00 PM - 8:30 PM	Tr	Lakeshore	N/A

COMP 339: Distributed Systems

Section	Instructor	Time	Day(s)	Campus	Note
1	Sarah Kaylor	7:00 PM - 9:30 PM	M	Lakeshore	N/A

COMP 340: Computer Forensics

Section	Instructor	Time	Day(s)	Campus	Note
1	Thomas Yarrish	7:00 PM - 9:30 PM	W	Water Tower	N/A

COMP 341: Human-Computer Interaction

Section	Instructor	Time	Day(s)	Campus	Note
1	Nicholas J Hayward	7:00 PM - 9:30 PM	Tr	Water Tower	N/A

³This is an online class. All lectures will be pre-recorded. Students are asked to attend smaller-group online interactive discussions at regular intervals during the semester with possible times chosen to fit different groups' schedules.

COMP 348: Network Security

Section	Instructor	Time	Day(s)	Campus	Note
1	Corby Schmitz	5:30 PM - 8:00 PM	F	Water Tower	N/A
2	Corby Schmitz	TBD	TBD	Online	⁴

Notes**COMP 353: Database Programming**

Section	Instructor	Time	Day(s)	Campus	Note
1	Chandra N Sekharan	4:15 PM - 6:45 PM	M	Lakeshore	N/A

COMP 363: Design and Analysis of Computer Algorithms

Section	Instructor	Time	Day(s)	Campus	Note
1	Mark Albert	2:45 PM - 5:15 PM	Tr	Lakeshore	N/A

COMP 372: Programming Languages

Section	Instructor	Time	Day(s)	Campus	Note
1	Konstantin Laufer	2:45 PM - 5:15 PM	W	Lakeshore	N/A

COMP 373: Objects, Frameworks, and Patterns

Section	Instructor	Time	Day(s)	Campus	Note
1	Berhane Zewdie	7:00 PM - 9:30 PM	T	Water Tower	N/A

COMP 377: IT Project Management

Section	Instructor	Time	Day(s)	Campus	Note
1	Conrad Weisert	4:15 PM - 6:45 PM	F	Water Tower	N/A

COMP 378: Artificial Intelligence

Section	Instructor	Time	Day(s)	Campus	Note
1	Conrad Weisert	2:45 PM - 5:15 PM	M	Lakeshore	N/A

⁴This is an online class. The classroom session will be broadcast live on Friday evenings via AdobeConnect allowing online student interaction. Sessions will also be recorded and made available. Students may participate synchronously or asynchronously at their discretion. Combined with COMP 448-002.

COMP 383: Computational Biology

Section	Instructor	Time	Day(s)	Campus	Note
1	Heather E. Wheeler	2:45 PM - 4:05 PM	MW	Lakeshore	N/A

COMP 388: Topics in Computer Science

Section	Topic	Instructor	Time	Day(s)	Campus	Note
4	Foundations of Computer Science I	Andrew N Harrington	See Note	See Note	Water Tower	See note ⁵
5	Foundations of Computer Science II	Peter L Dordal	See Note	See Note	Water Tower	See note ⁶
6	Prog Lang and Systems Seminar	Jose Luis Gahete Diaz	2:45 PM - 4:00 PM	F	Lakeshore	N/A
7	Physical Design and Fabrication	TBD	7:00 PM - 9:30 PM	M	Lakeshore	N/A

Notes**COMP 391: Internship in Computer Science**

Section	Instructor	Time	Day(s)	Campus	Note
01E	Ronald I Greenberg	TBD	TBD	Water Tower	N/A

COMP 397: Research Seminar

Section	Instructor	Time	Day(s)	Campus	Note
8	Mark Albert	TBD	TBD	On-line	⁷

⁵Eight Week-First Session. This section is restricted to students with undergraduate degrees. Department Consent required, and then a Computer Science Department staff member will enroll you. FIRST CLASS EARLY: Friday before other classes start: Friday, January 15! And then on for the next seven weeks, ending before vacation week. Classes meet from 4:15 pm - 8:15 pm on Fri, Jan 15, and Fri, Jan 22. And then, 4:15 pm- 8:15 pm for the next 6 Mondays: Jan 25, Feb 1, Feb 8, Feb 15, Feb 22, Feb 29. Labs meet on Wednesdays, 4:15 pm - 6:30 pm: Jan 20, Jan 27, Feb 3, Feb 10, Feb 17, Feb 24, Mar 2.

⁶Eight Week-Second Session. This section is restricted to students with undergraduate degrees. Department Consent required, and then a Computer Science Department staff member will enroll you. Eight weeks after vacation, including two meetings in finals week. Mondays, 4:15 pm -8:15 pm: March 14, March 21, March 28, April 4, April 11, April 18, April 25, May 2. Labs meet on Wednesdays, 4:15 pm - 6:30 pm: March 16, March 23, March 30, April 6, April 13, April 20, April 27, May 4.

⁷The Computer Science Seminar course and the Research Seminar course will meet on alternate weeks at the scheduled course time.

Notes***COMP 398: Independent Study***

Section	Instructor	Time	Day(s)	Campus	Note
01E	Konstantin Laufer	TBD	TBD	Water Tower	N/A
02E	Mark Albert	TBD	TBD	Water Tower	N/A
03E	Dmitriy Dligach	TBD	TBD	Water Tower	N/A
04E	Peter L Dordal	TBD	TBD	Water Tower	N/A
05E	Ronald I Greenberg	TBD	TBD	Water Tower	N/A
06E	Andrew N Harrington	TBD	TBD	Water Tower	N/A
07E	Nicholas J Hayward	TBD	TBD	Water Tower	N/A
08E	William Honig	TBD	TBD	Water Tower	N/A
09E	Channah Naiman	TBD	TBD	Water Tower	N/A
10E	Catherine Putonti	TBD	TBD	Water Tower	N/A
11E	Chandra N Sekharan	TBD	TBD	Water Tower	N/A
12E	Heather E. Wheeler	TBD	TBD	Water Tower	N/A

1.1.4 CSIS Courses

No CSIS Courses Currently Available.

1.2 Spring 2016 Schedule (Mobile/Single Column Format)

The following courses will (tentatively) be held during the Spring 2016 semester.

For classroom locations and open/full status, see [LOCUS](#).

Note: While we update this page regularly, please check [LOCUS](#) for the most recent information.

In case of conflict, information on LOCUS should be considered authoritative.

- *CSIS Courses*

1.2.2 Undergraduate Courses

1.2.3 COMP 111-01W: History of Computing

Instructor: George Thiruvathukal

Time: 11:30 AM - 12:20 PM

Day(s): Monday Wednesday Friday

Campus: Lakeshore

Course Description: [COMP 111: History of Computing](#)

1.2.4 COMP 125-1: Visual Information Processing

Instructor: Channah Naiman

Time: 1:00 PM - 2:15 PM

Day(s): Tuesday Thursday

Campus: Lakeshore

Course Description: [COMP 125: Visual Information Processing](#)

1.2.5 COMP 125-2: Visual Information Processing

Instructor: Guy Bevente

Time: 7:00 PM - 9:30 PM

Day(s): Thursday

Campus: Lakeshore

Course Description: [COMP 125: Visual Information Processing](#)

1.2.6 COMP 150-1: Introduction to Computing

Instructor: Andrew N Harrington

Time: 2:30 PM - 4:00 PM

Day(s): Tuesday, see note

Campus: Lakeshore

Course Description: [COMP 150: Introduction to Computing](#)

Notes: This class has run successfully both face to face and online, with the same content. This blended format takes advantage of face-to-face in initially getting to know each other, getting the class going, finding partners, and getting direct help with any online technology. Later, since the class is flipped, and most all interaction is help on your individual computer work, help can come online, either in part of regular class time or at varied times convenient to you and the instructor. We will use software to share screens online. A quiet place is important for online help, with a computer that you have access to having good Internet speed and with the ability to talk and listen online.

1.2.7 COMP 150-2: Introduction to Computing

Instructor: TBD

Time: 7:00 PM - 9:30 PM

Day(s): Wednesday

Campus: Lakeshore

Course Description: [COMP 150: Introduction to Computing](#)

1.2.8 COMP 150-3: Introduction to Computing

Instructor: Heather E. Wheeler

Time: 12:10 PM - 1:25 PM

Day(s): Monday Wednesday

Campus: Lakeshore

Course Description: [COMP 150: Introduction to Computing](#)

1.2.9 COMP 163-1: Discrete Structures

Instructor: TBD

Time: 2:45 PM - 4:00 PM

Day(s): Monday Wednesday

Campus: Lakeshore

Course Description: [COMP 163: Discrete Structures](#)

1.2.10 COMP 163-2: Discrete Structures

Instructor: TBD

Time: 4:15 PM - 5:30 PM

Day(s): Monday Wednesday

Campus: Lakeshore

Course Description: [COMP 163: Discrete Structures](#)

1.2.11 COMP 170-1: Introduction to Object-Oriented Programming

Instructor: Robert Yacobellis

Time: 10:00 AM - 11:15 AM

Day(s): Tuesday Thursday

Campus: Lakeshore

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.2.12 COMP 170-2: Introduction to Object-Oriented Programming

Instructor: Dmitriy Dligach

Time: 10:25 AM - 11:40 AM

Day(s): Monday Wednesday

Campus: Lakeshore

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.2.13 COMP 170-3: Introduction to Object-Oriented Programming

Instructor: Maria Del Carmen Saenz

Time: 6:00 PM - 8:30 PM

Day(s): Tuesday

Campus: Lakeshore

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.2.14 COMP 170-4: Introduction to Object-Oriented Programming

Instructor: Dmitriy Dligach

Time: 12:10 PM - 1:25 PM

Day(s): Monday Wednesday

Campus: Lakeshore

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.2.15 COMP 170-01L: Introduction to Object-Oriented Programming

Instructor: Robert Yacobellis

Time: 11:30 AM - 11:55 AM

Day(s): Tuesday Thursday

Campus: Lakeshore

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.2.16 COMP 170-02L: Introduction to Object-Oriented Programming

Instructor: Dmitriy Dligach

Time: 10:25 AM - 11:15 AM

Day(s): Friday

Campus: Lakeshore

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.2.17 COMP 170-03L: Introduction to Object-Oriented Programming

Instructor: Maria Del Carmen Saenz

Time: 8:30 PM - 9:20 PM

Day(s): Tuesday

Campus: Lakeshore

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.2.18 COMP 170-04L: Introduction to Object-Oriented Programming

Instructor: Dmitriy Dligach

Time: 12:35 PM - 1:25 PM

Day(s): Friday

Campus: Lakeshore

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.2.19 COMP 250-01W: Introduction to Scientific and Technical Communication

Instructor: Roxanne Schwab

Time: 2:45 PM - 4:00 PM

Day(s): Monday Wednesday

Campus: Lakeshore

Course Description: [COMP 250: Introduction to Scientific and Technical Communication](#)

1.2.20 COMP 250-02W: Introduction to Scientific and Technical Communication

Instructor: Roxanne Schwab

Time: 7:00 PM - 9:30 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 250: Introduction to Scientific and Technical Communication](#)

1.2.21 COMP 264-1: Introduction to Computer Systems

Instructor: Ronald I Greenberg

Time: 9:20 AM - 10:10 AM

Day(s): Monday Wednesday Friday

Campus: Lakeshore

Course Description: [COMP 264: Introduction to Computer Systems](#)

1.2.22 COMP 271-1: Data Structures: Algorithms and Applications

Instructor: Catherine Putonti

Time: 2:30 PM - 3:45 PM

Day(s): Tuesday Thursday

Campus: Lakeshore

Course Description: [COMP 271: Data Structures](#)

1.2.23 COMP 271-2: Data Structures: Algorithms and Applications

Instructor: Catherine Putonti

Time: 4:15 PM - 6:45 PM

Day(s): Wednesday

Campus: Lakeshore

Course Description: [COMP 271: Data Structures](#)

1.2.24 COMP 271-01L: Data Structures: Algorithms and Applications

Instructor: Catherine Putonti

Time: 3:45 PM - 4:05 PM

Day(s): Tuesday Thursday

Campus: Lakeshore

Course Description: [COMP 271: Data Structures](#)

1.2.25 COMP 271-02L: Data Structures: Algorithms and Applications

Instructor: Catherine Putonti

Time: 7:00 PM - 7:50 PM

Day(s): Wednesday

Campus: Lakeshore

Course Description: [COMP 271: Data Structures](#)

1.2.26 COMP 300-1: Data Warehousing and Data Mining

Instructor: Channah Naiman

Time: 4:15 PM - 6:45 PM

Day(s): Wednesday

Campus: Water Tower

Course Description: [COMP 300: Data Warehousing and Data Mining](#)

1.2.27 COMP 300-2: Data Warehousing and Data Mining

Instructor: Channah Naiman

Time: See notes

Day(s): See notes

Campus: Online

Notes: This class is a totally online asynchronous course. Exams may be synchronous. Combined with COMP 488-302.

Course Description: [COMP 300: Data Warehousing and Data Mining](#)

1.2.28 COMP 305-1: Database Administration

Instructor: Peter L Dordal

Time: 4:15 PM - 6:45 PM

Day(s): Tuesday

Campus: Water Tower

Course Description: [COMP 305: Database Administration](#)

1.2.29 COMP 312-01E: Open Source Computing

Instructor: TBD

Time: 7:00 PM - 9:30 PM

Day(s): Wednesday

Campus: Water Tower

Course Description: [COMP 312: Free/Open Source Computing](#)

1.2.30 COMP 313-1: Intermediate Object-Oriented Development

Instructor: Robert Yacobellis

Time: 1:00 PM - 2:15 PM

Day(s): Tuesday Thursday

Campus: Lakeshore

Course Description: [COMP 313: Intermediate Object-Oriented Development](#)

1.2.31 COMP 317-1: Social, Legal, and Ethical Issues in Computing

Instructor: Matthew Paul Butcher

Time: TBD

Day(s): TBD

Campus: Online

Notes: This is an online class. All lectures will be pre-recorded. Students are asked to attend smaller-group online interactive discussions at regular intervals during the semester with possible times chosen to fit different groups' schedules.

Course Description: [COMP 317: Social, Legal, and Ethical Issues in Computing](#)

1.2.32 COMP 317-01W: Social, Legal, and Ethical Issues in Computing

Instructor: Roxanne Schwab

Time: 7:00 PM - 9:30 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 317: Social, Legal, and Ethical Issues in Computing](#)

1.2.33 COMP 319-1: Introduction to UNIX

Instructor: Jose Luis Gahete Diaz

Time: 1:40 PM - 2:30 PM

Day(s): Friday

Campus: Lakeshore

Course Description: [COMP 319: Introduction to Unix](#)

1.2.34 COMP 324-1: Client-Side Web Development

Instructor: Nicholas J Hayward

Time: 4:15 PM - 6:45 PM

Day(s): Monday

Campus: Water Tower

Course Description: [COMP 324: Client-Side Web Development](#)

1.2.35 COMP 330-1: Software Engineering

Instructor: George Thiruvathukal

Time: 6:00 PM - 8:30 PM

Day(s): Thursday

Campus: Lakeshore

Course Description: [COMP 330: Software Engineering](#)

1.2.36 COMP 339-1: Distributed Programming

Instructor: Sarah Kaylor

Time: 7:00 PM - 9:30 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 339: Distributed Systems](#)

1.2.37 COMP 340-1: Computer Forensics

Instructor: Thomas Yarrish

Time: 7:00 PM - 9:30 PM

Day(s): Wednesday

Campus: Water Tower

Course Description: [COMP 340: Computer Forensics](#)

1.2.38 COMP 341-1: Human-Computer Interaction

Instructor: Nicholas J Hayward

Time: 7:00 PM - 9:30 PM

Day(s): Thursday

Campus: Water Tower

Course Description: [COMP 341: Human-Computer Interaction](#)

1.2.39 COMP 348-1: Network Security

Instructor: Corby Schmitz

Time: 5:30 PM - 8:00 PM

Day(s): Friday

Campus: Water Tower

Course Description: [COMP 348: Network Security](#)

1.2.40 COMP 348-2: Network Security

Instructor: Corby Schmitz

Time: TBD

Day(s): TBD

Campus: Online

Notes: This is an online class. The classroom session will be broadcast live on Friday evenings via AdobeConnect allowing online student interaction. Sessions will also be recorded and made available. Students may participate synchronously or asynchronously at their discretion. Combined with COMP 448-002.

Course Description: [COMP 348: Network Security](#)

1.2.41 COMP 353-1: Database Programming

Instructor: Chandra N Sekharan

Time: 4:15 PM - 6:45 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 353: Database Programming](#)

1.2.42 COMP 363-1: Design and Analysis Computer Algorithms

Instructor: Mark Albert

Time: 2:45 PM - 5:15 PM

Day(s): Thursday

Campus: Lakeshore

Course Description: [COMP 363: Design and Analysis of Computer Algorithms](#)

1.2.43 COMP 372-1: Programming Languages

Instructor: Konstantin Laufer

Time: 2:45 PM - 5:15 PM

Day(s): Wednesday

Campus: Lakeshore

Course Description: [COMP 372: Programming Languages](#)

1.2.44 COMP 373-1: Objects, Frameworks, and Patterns

Instructor: Berhane Zewdie

Time: 7:00 PM - 9:30 PM

Day(s): Tuesday

Campus: Water Tower

Course Description: [COMP 373: Objects, Frameworks, and Patterns](#)

1.2.45 COMP 377-1: IT Project Management

Instructor: Conrad Weisert

Time: 4:15 PM - 6:45 PM

Day(s): Friday

Campus: Water Tower

Course Description: [COMP 377: IT Project Management](#)

1.2.46 COMP 378-1: Artificial Intelligence

Instructor: Conrad Weisert

Time: 2:45 PM - 5:15 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 378: Artificial Intelligence](#)

1.2.47 COMP 383-1: Computational Biology

Instructor: Heather E. Wheeler

Time: 2:45 PM - 4:05 PM

Day(s): Monday Wednesday

Campus: Lakeshore

Course Description: [COMP 383: Computational Biology](#)

1.2.48 COMP 388-4: Foundations of Computer Science I

This course meets during the first 8 week session of the semester.

Instructor: Andrew N Harrington

Time: See Note

Day(s): See Note

Campus: Water Tower

Course Description: [COMP 388: Topics in Computer Science](#)

Note: Eight Week-First Session. This section is restricted to students with undergraduate degrees. Department Consent required, and then a Computer Science Department staff member will enroll you. FIRST CLASS EARLY: Friday before other classes start: Friday, January 15! And then on for the next seven weeks, ending before vacation week. Classes meet from 4:15 pm - 8:15 pm on Fri, Jan 15, and Fri, Jan 22. And then, 4:15 pm- 8:15 pm for the next 6 Mondays: Jan 25, Feb 1, Feb 8, Feb 15, Feb 22, Feb 29. Labs meet on Wednesdays, 4:15 pm - 6:30 pm: Jan 20, Jan 27, Feb 3, Feb 10, Feb 17, Feb 24, Mar 2.

1.2.49 COMP 388-5: Foundations of Computer Science II

This course meets during the second 8 week session of the semester.

Instructor: Peter L Dordal

Time: See Note

Day(s): See Note

Campus: Water Tower

Course Description: [COMP 388: Topics in Computer Science](#)

Notes: Eight Week-Second Session. This section is restricted to students with undergraduate degrees. Department Consent required, and then a Computer Science Department staff member will enroll you. Eight weeks after vacation, including two meetings in finals week. Mondays, 4:15 pm - 8:15 pm: March 14, March 21, March 28, April 4, April 11, April 18, April 25, May 2. Labs meet on Wednesdays, 4:15 pm - 6:30 pm: March 16, March 23, March 30, April 6, April 13, April 20, April 27, May 4.

1.2.50 COMP 388-6: Prog Lang and Systems Seminar

Instructor: Jose Luis Gahete Diaz

Time: 2:45 PM - 4:00 PM

Day(s): Friday

Campus: Lakeshore

Course Description: [COMP 388: Topics in Computer Science](#)

1.2.51 COMP 388-7: Physical Design and Fabrication

Instructor: TBD

Time: 7:00 PM - 9:30 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 388: Topics in Computer Science](#)

1.2.52 COMP 391-01E: Internship in CS

Instructor: Ronald I Greenberg

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 391: Internship in Computer Science](#)

1.2.53 COMP 397-8: Research Seminar

Instructor: Mark Albert

Time: TBD

Day(s): TBD

Campus: Online

Notes: The Computer Science Seminar course and the Research Seminar course will meet on alternate weeks at the scheduled course time.

Course Description: [COMP 397: Research Seminar](#)

1.2.54 COMP 398-01E: Independent Study

Instructor: Konstantin Laufer

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.55 COMP 398-02E: Independent Study

Instructor: Mark Albert

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.56 COMP 398-03E: Independent Study

Instructor: Dmitriy Dligach

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.57 COMP 398-04E: Independent Study

Instructor: Peter L Dordal

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.58 COMP 398-05E: Independent Study

Instructor: Ronald I Greenberg

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.59 COMP 398-06E: Independent Study

Instructor: Andrew N Harrington

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.60 COMP 398-07E: Independent Study

Instructor: Nicholas J Hayward

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.61 COMP 398-08E: Independent Study

Instructor: William Honig

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.62 COMP 398-09E: Independent Study

Instructor: Channah Naiman

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.63 COMP 398-10E: Independent Study

Instructor: Catherine Putonti

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.64 COMP 398-11E: Independent Study

Instructor: Chandra N Sekharan

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.65 COMP 398-12E: Independent Study

Instructor: Heather E. Wheeler

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.66 COMP 398-13E: Independent Study

Instructor: Robert Yacobellis

Time: TBD

Day(s): TBD

Campus: Water Tower

Course Description: [COMP 398: Independent Study](#)

1.2.67 COMP 399-1: Computer Science Seminar

Instructor: Mark Albert

Time: 11:30 AM - 12:45 PM

Day(s): Tuesday

Campus: Lakeshore

Course Description: [COMP 399: Computer Science Seminar](#)

1.2.68 Graduate Courses

1.2.69 COMP 412-1: Open Source Computing

Instructor: TBD

Time: 7:00 PM - 9:30 PM

Day(s): Wednesday

Campus: Water Tower

Course Description: [COMP 412: Free/Open Source Computing](#)

1.2.70 COMP 413-1: Intermediate Object-Oriented Development

Instructor: Robert Yacobellis

Time: 4:15 PM - 6:45 PM

Day(s): Tuesday

Campus: Water Tower

Course Description: [COMP 413: Intermediate Object-Oriented Development](#)

1.2.71 COMP 417-1: Social and Ethical Issues in Computing

Instructor: Peter L Dordal

Time: 4:15 PM - 6:45 PM

Day(s): Thursday

Campus: Water Tower

Course Description: [COMP 417: Social, Legal, and Ethical Issues in Computing](#)

1.2.72 COMP 424-1: Client-Side Web Design

Instructor: Nicholas J Hayward

Time: 4:15 PM - 6:45 PM

Day(s): Monday

Campus: Water Tower

Course Description: [COMP 424: Client-Side Web Design](#)

1.2.73 COMP 439-1: Distributed Systems

Instructor: Sarah Kaylor

Time: 7:00 PM - 9:30 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 439: Distributed Systems](#)

1.2.74 COMP 441-1: Human-Computer Interface Design

Instructor: Nicholas J Hayward

Time: 7:00 PM - 9:30 PM

Day(s): Thursday

Campus: Water Tower

Course Description: [COMP 441: Human-Computer Interface Design](#)

1.2.75 COMP 448-1: Network Security

Instructor: Corby Schmitz

Time: 5:30 PM - 8:00 PM

Day(s): Friday

Campus: Water Tower

Course Description: [COMP 448: Network Security](#)

1.2.76 COMP 448-2: Network Security

Instructor: Corby Schmitz

Time: TBD

Day(s): TBD

Campus: Online

Notes: This is an online class. The classroom session will be broadcast live on Friday evenings via AdobeConnect allowing online student interaction. Sessions will also be recorded and made available. Students may participate synchronously or asynchronously at their discretion. Combined with COMP 348-002.

Course Description: [COMP 448: Network Security](#)

1.2.77 COMP 460-1: Algorithms & Complexity

Instructor: Chandra N Sekharan

Time: 2:45 PM - 5:15 PM

Day(s): Tuesday

Campus: Lakeshore

Course Description: [COMP 460: Algorithms and Complexity](#)

1.2.78 COMP 471-1: Thry of Programming Languages

Instructor: Konstantin Laufer

Time: 2:45 PM - 5:15 PM

Day(s): Wednesday

Campus: Lakeshore

Course Description: [COMP 471: Programming Languages](#)

1.2.79 COMP 473-1: Object-Oriented Programming

Instructor: Berhane Zewdie

Time: 7:00 PM - 9:30 PM

Day(s): Tuesday

Campus: Water Tower

Course Description: [COMP 473: Object-Oriented Programming](#)

1.2.80 COMP 474-1: Software Engineering

Instructor: TBD

Time: 7:00 PM - 9:30 PM

Day(s): Thursday

Campus: Water Tower

Course Description: [COMP 474: Software Engineering](#)

1.2.81 COMP 477-1: IT Project Management

Instructor: Conrad Weisert

Time: 4:15 PM - 6:45 PM

Day(s): Friday

Campus: Water Tower

Course Description: [COMP 477: IT Project Management](#)

1.2.82 COMP 484-1: Artificial Intelligence

Instructor: Conrad Weisert

Time: 2:45 PM - 5:15 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 484: Artificial Intelligence](#)

1.2.83 COMP 488-7: Physical Design and Fabrication

Instructor: TBD

Time: 7:00 PM - 9:30 PM

Day(s): Monday

Campus: Lakeshore

Course Description: [COMP 488: Topics in Computer Science](#)

1.2.84 COMP 488-301: Data Warehousing and Data Mining

Instructor: Channah Naiman

Time: 4:15 PM - 6:45 PM

Day(s): Wednesday

Campus: Water Tower

Course Description: [COMP 488: Topics in Computer Science](#)

1.2.85 COMP 488-302: Data Warehousing and Data Mining

Instructor: Channah Naiman

Time: See notes

1.3 Fall 2015 Schedule (Widescreen/Table Format)

The following courses will (tentatively) be held during the Fall 2015 semester.

For classroom locations and open/full status, see [LOCUS](#).

Note: While we update this page regularly, please check [LOCUS](#) for the most recent information.

In case of conflict, information on LOCUS should be considered authoritative.

See [Textbook Information](#).

Alternate Mobile format page: [Fall 2015 Schedule \(Mobile/Single Column Format\)](#).

1.3.1 Headings in this Page

- [Undergraduate Courses](#)
- [Graduate Courses](#)
- [CSIS Courses](#)

1.3.2 Undergraduate Courses

COMP 111: History of Computing

Section	Instructor	Time	Day(s)	Campus	Note
01W	George Thiruvathukal	12:35:00 PM - 1:25:00 PM	MWF	LSC	N/A

COMP 125: Visual Information Processing

Section	Instructor	Time	Day(s)	Campus	Note
001	Channah Naiman	1:00:00 PM - 2:15:00 PM	TTr	LSC	N/A
002	Channah Naiman	4:15:00 PM - 6:45:00 PM	T	LSC	Tentative: May not be offered

COMP 150: Introduction to Computing

Section	Instructor	Time	Day(s)	Campus	Note
001	Dima Dligach	2:45:00 PM - 4:00:00 PM	MW	LSC	N/A
002	Chandra N Sekharan	11:30:00 AM - 12:45:00 PM	TTr	LSC	N/A
003	Grace (PT) Hopper	12:35:00 PM - 1:25:00 PM	MWF	LSC	N/A

COMP 163: Discrete Structures

Section	Instructor	Time	Day(s)	Campus	Note
001	Ronald I Greenberg	11:30:00 AM - 12:20:00 PM	MWF	LSC	N/A
002	Ada (PT) Lovelace	4:15:00 PM - 5:30:00 PM	MW	LSC	N/A
003	Ada (PT) Lovelace	6:00:00 PM - 7:15:00 PM	MW	LSC	N/A

COMP 170: Introduction to Object-Oriented Programming

Section	Instructor	Time	Day(s)	Campus	Note
001	Robert Yacobellis	10:00:00 AM - 11:15:00 AM	TTr	LSC	N/A
002	Robert Yacobellis	1:00:00 PM - 2:15:00 PM	TTr	LSC	N/A
003	William Honig	2:30:00 PM - 3:45:00 PM	TTr	LSC	N/A
004	William Honig	4:15:00 PM - 6:45:00 PM	T	LSC	N/A
01L	Robert Yacobellis	11:15:00 AM - 11:40:00 AM	TTr	LSC	N/A
02L	Robert Yacobellis	12:35:00 PM - 1:00:00 PM	TTr	LSC	N/A
03L	William Honig	3:45:00 PM - 4:05:00 PM	TTr	LSC	N/A
04L	William Honig	7:00:00 PM - 7:50:00 PM	T	LSC	N/A

COMP 215: Object-Oriented Programming with Mathematics

Section	Instructor	Time	Day(s)	Campus	Note
001	Christine A Haught	2:30:00 PM - 3:45:00 PM	TTr	LSC	N/A

COMP 250: Introduction to Scientific and Technical Communication

Section	Instructor	Time	Day(s)	Campus	Note
01W	Roxanne Schwab	2:45:00 PM - 4:00:00 PM	MW	LSC	N/A

COMP 251: Introduction to Database Systems

Section	Instructor	Time	Day(s)	Campus	Note
001	Guy Bevente	7:00:00 PM - 9:30:00 PM	M	LSC	N/A

COMP 264: Introduction to Computer Systems

Section	Instructor	Time	Day(s)	Campus	Note
001	Ronald I Greenberg	10:25:00 AM - 11:15:00 AM	MWF	LSC	N/A

COMP 271: Data Structures

Section	Instructor	Time	Day(s)	Campus	Note
001	Chandra N Sekharan	2:30:00 PM - 3:45:00 PM	TTr	WTC	N/A
002	Maria Del Carmen Saenz	6:00:00 PM - 8:30:00 PM	Tr	LSC	N/A
01L	Chandra N Sekharan	3:45:00 PM - 4:05:00 PM	TTr	WTC	N/A
02L	Maria Del Carmen Saenz	8:30:00 PM - 9:20:00 PM	Tr	LSC	N/A

COMP 312: Free/Open Source Computing

Section	Instructor	Time	Day(s)	Campus	Note
01E	George Thiruvathukal	•		ONLN	This is an online class that includes synchronous and asynchronous interaction among students and Instructor. All sessions will be recorded. Specific synchronous meetings will be scheduled in consultation with students

COMP 313: Intermediate Object-Oriented Development

Section	Instructor	Time	Day(s)	Campus	Note
001	Konstantin Laufer	2:45:00 PM - 5:15:00 PM	W	LSC	N/A

COMP 314/315: Problem Solving Strategies

Section	Instructor	Time	Day(s)	Campus	Note
001	Andrew N Harrington	See Note	TBD	TBD	One organizational meeting Monday August 24 3-4PM in LT 410 to agree on 5 weekend practice times through the end of October. See the Programming Team .

COMP 317: Social, Legal, and Ethical Issues in Computing

Section	Instructor	Time	Day(s)	Campus	Note
001	Matthew Paul Butcher	7:00:00 PM - 9:30:00 PM	T	LSC	N/A

COMP 320: Software Systems Analysis

Section	Instructor	Time	Day(s)	Campus	Note
001	Conrad Weisert	4:15:00 PM - 6:45:00 PM	M	WTC	N/A

COMP 331: Cryptography

Section	Instructor	Time	Day(s)	Campus	Note
001	Stephen Doty	9:20:00 AM - 10:10:00 AM	MWF	LSC	N/A

COMP 336: Markup Languages

Section	Instructor	Time	Day(s)	Campus	Note
001	Matthew William Bone	7:00:00 PM - 9:30:00 PM	W	WTC	N/A

COMP 343: Introduction to Computer Networks

Section	Instructor	Time	Day(s)	Campus	Note
001	Peter L Dordal	4:15:00 PM - 6:45:00 PM	T	WTC	N/A
002	Peter L Dordal	•		ONLN	This is an online class that includes synchronous and asynchronous interaction among students and instructor. Participation in synchronous sessions is strongly recommended.

COMP 347: Intrusion Detection and Computer Forensics

Section	Instructor	Time	Day(s)	Campus	Note
001	Corby Schmitz	5:45:00 PM - 8:15:00 PM	F	WTC	N/A
002	Corby Schmitz	•		ONLN	This is an on-line class. The classroom session will be broadcast live on Friday evenings via AdobeConnect allowing online student interaction. Sessions will also be recorded and made available. Students may participate synchronously or asynchronously at their discretion.

COMP 363: Design and Analysis of Computer Algorithms

Section	Instructor	Time	Day(s)	Campus	Note
001	Mark Albert	2:45:00 PM - 5:15:00 PM	M	LSC	N/A

COMP 364: High-Performance Computing

Section	Instructor	Time	Day(s)	Campus	Note
001	Sharan Kalwani	7:00:00 PM - 9:30:00 PM	W	WTC	N/A

COMP 374: Introduction to Operating Systems

Section	Instructor	Time	Day(s)	Campus	Note
001	Sarah Kaylor	7:00:00 PM - 9:30:00 PM	M	LSC	N/A

COMP 381: Bioinformatics

Section	Instructor	Time	Day(s)	Campus	Note
001	Heather Wheeler	4:15:00 PM - 5:30:00 PM	TTr	LSC	N/A
002	Heather Wheeler	4:15:00 PM - 6:45:00 PM	W	LSC	N/A

COMP 388: Topics in Computer Science

Each section is a totally different course. The course title is in the Note column.

Section	Instructor	Time	Day(s)	Campus	Note
001	Karim Kabani	10:00:00 AM - 12:30:00 PM	Sa	WTC	RAD.net
002	Mark Albert	7:00:00 PM - 9:30:00 PM	Tr	LSC	Machine Learning
003	Catherine Putonti	4:15:00 PM - 6:45:00 PM	T	LSC	Metagenomics
004	Andrew N Harrington	See Note	M/Th	WTC	Foundations of CS I: compressed version of Comp 170 meets for the first eight weeks of the Semester Mondays (4:15 PM - 8:15 PM) replacing holiday/vacation Mondays with Fridays (4:15 PM - 8:15 PM). So the Monday/Friday class schedule is: Mon Aug 24; Mon Aug 31; Fri Sep 11; Mon Sep 14; Mon Sept 21; Monday Sept 28; Fri Oct 9; Mon Oct 12. It also meets eight consecutive Thursdays: 4:15 PM - 6:30 PM Aug 27 - Oct 15.
005	Peter L Dordal	See Note	M/Th	WTC	Foundations of CS II: compressed version of Comp 271 meets for the last 8 weeks of the semester Mondays Oct 19-Dec 7 (4:15-8:15PM) and also Thursdays Oct 22 - Dec 10 (4:15-6:30PM) excluding Thursday Nov 26 (Thanksgiving).
422	Dima Dligach	2:45:00 PM - 5:15:00 PM	F	LSC	Software Development for Wireless/Mobile Devices
424	Nicholas Hayward	4:15:00 PM - 6:45:00 PM	Tr	WTC	Client-Side Web Design
433	Berhane Zewdie	7:00:00 PM - 9:30:00 PM	T	WTC	Web Services Programming

COMP 390: Broadening Participation in STEM (Computing, Math & Science)

Section	Instructor	Time	Day(s)	Campus	Note
01E	Ronald I Greenberg	1:40:00 PM - 2:30:00 PM	MW	LSC	N/A

COMP 391: Internship in Computer Science

Section	Instructor	Time	Day(s)	Campus	Note
01E	Robert Yacobellis	.		WTC	N/A

COMP 398: Independent Study

Section	Instructor	Time	Day(s)	Campus	Note
01E	Konstantin Laufer	•		WTC	N/A
02E	Mark Albert	•		WTC	N/A
03E	Peter L Dordal	•		WTC	N/A
04E	Ronald I Greenberg	•		LSC	N/A
05E	Andrew N Harrington	•		WTC	N/A
06E	William Honig	•		WTC	N/A
07E	Channah Naiman	•		WTC	N/A
08E	Catherine Putonti	•		LSC	N/A
09E	Chandra N Sekharan	•		WTC	N/A
10E	Robert Yacobellis	•		WTC	N/A

COMP 399: Computer Science Seminar

Section	Instructor	Time	Day(s)	Campus	Note
001	Mark Albert	12:35:00 PM - 1:25:00 PM	F	LSC	N/A

1.3.3 Graduate Courses**COMP 410: Operating Systems**

Section	Instructor	Time	Day(s)	Campus	Note
001	Sarah Kaylor	7:00:00 PM - 9:30:00 PM	M	LSC	N/A

COMP 412: Free/Open Source Computing

Section	Instructor	Time	Day(s)	Campus	Note
001	George Thiruvathukal	.		ONLN	This is an online class that includes synchronous and asynchronous interaction among students and Instructor. All sessions will be recorded. Specific synchronous meetings will be scheduled in consultation with students

COMP 413: Intermediate Object-Oriented Development

Section	Instructor	Time	Day(s)	Campus	Note
001	Robert Yacobellis	4:15:00 PM - 6:45:00 PM	T	WTC	N/A

COMP 417: Social, Legal, and Ethical Issues in Computing

Section	Instructor	Time	Day(s)	Campus	Note
001	Roxanne Schwab	4:15:00 PM - 6:45:00 PM	W	LSC	Students needing to get to a 7PM WTC class will be allowed to leave early.

COMP 420: Software Systems Analysis

Section	Instructor	Time	Day(s)	Campus	Note
001	Conrad Weisert	4:15:00 PM - 6:45:00 PM	M	WTC	N/A

COMP 422: Software Development for Wireless/Mobile Devices

Section	Instructor	Time	Day(s)	Campus	Note
001	Dima Dligach	2:45:00 PM - 5:15:00 PM	F	LSC	N/A

COMP 424: Client-Side Web Design

Section	Instructor	Time	Day(s)	Campus	Note
001	Nicholas Hayward	4:15:00 PM - 6:45:00 PM	Tr	WTC	N/A

COMP 431: Cryptography

Section	Instructor	Time	Day(s)	Campus	Note
001	Stephen Doty	9:20:00 AM - 10:10:00 AM	MWF	LSC	N/A

COMP 433: Web Services Programming

Section	Instructor	Time	Day(s)	Campus	Note
001	Berhane Zewdie	7:00:00 PM - 9:30:00 PM	T	WTC	N/A

COMP 436: Markup Languages

Section	Instructor	Time	Day(s)	Campus	Note
001	Matthew William Bone	7:00:00 PM - 9:30:00 PM	W	WTC	N/A

COMP 443: Computer Networks

Section	Instructor	Time	Day(s)	Campus	Note
001	Peter L Dordal	4:15:00 PM - 6:45:00 PM	T	WTC	N/A
002	Peter L Dordal	•		ONLN	This is an online class that includes synchronous and asynchronous interaction among students and instructor. Participation in synchronous sessions is strongly recommended.

COMP 447: Intrusion Detection and Computer Forensics

Section	Instructor	Time	Day(s)	Campus	Note
001	Corby Schmitz	5:45:00 PM - 8:15:00 PM	F	WTC	N/A
002	Corby Schmitz	•		ONLN	This is an on-line class. The classroom session will be broadcast live on Friday evenings via AdobeConnect allowing online student interaction. Sessions will also be recorded and made available. Students may participate synchronously or asynchronously at their discretion.

COMP 453: Database Programming

Section	Instructor	Time	Day(s)	Campus	Note
001	Channah Naiman	7:00:00 PM - 9:30:00 PM	Tr	WTC	N/A
002	Channah Naiman	•		ONLN	This is an online class. All lectures will be recorded. Students may be asked to attend smaller-group online interactive discussions during the semester.

COMP 464: High-Performance Computing

Section	Instructor	Time	Day(s)	Campus	Note
001	Sharan Kalwani	7:00:00 PM - 9:30:00 PM	W	WTC	N/A

COMP 488: Topics in Computer Science

Each section is a totally different course. The course title is in the Note column.

Section	Instructor	Time	Day(s)	Campus	Note
001	Karim Kabani	10:00:00 AM - 12:30:00 PM	Sa	WTC	RAD.NET
002	Mark Albert	7:00:00 PM - 9:30:00 PM	Tr	LSC	Machine Learning
003	Catherine Putonti	4:15:00 PM - 6:45:00 PM	T	LSC	Metagenomics
381	Heather Wheeler	4:15:00 PM - 5:30:00 PM	TTr	LSC	Bioinformatics
382	Heather Wheeler	4:15:00 PM - 6:45:00 PM	W	LSC	Bioinformatics

COMP 490: Independent Project

Section	Instructor	Time	Day(s)	Campus	Note
001	Konstantin Laufer	•		WTC	N/A
002	Mark Albert	•		WTC	N/A
003	Peter L Dordal	•		WTC	N/A
004	Ronald I Greenberg	•		WTC	N/A
005	Andrew N Harrington	•		WTC	N/A
006	William Honig	•		WTC	N/A
007	Channah Naiman	•		WTC	N/A
008	Catherine Putonti	•		WTC	N/A
009	Chandra N Sekharan	•		WTC	N/A
010	Robert Yacobellis	•		WTC	N/A

COMP 499: Internship

Section	Instructor	Time	Day(s)	Campus	Note
001	Andrew N Harrington	•		WTC	N/A
002	Andrew N Harrington	•		WTC	N/A

COMP 605: Master of Science Study

Section	Instructor	Time	Day(s)	Campus	Note
001	Andrew N Harrington	•		WTC	N/A

1.3.4 CSIS Courses

CSIS 494: Data Mining (meets with INFS 494 in fall Quarter)

Section	Instructor	Time	Day(s)	Campus	Note
001	Mary Malliaris (ISOM faculty)	6-9PM	M	WTC	Any CSIS courses will not open for our students until at least after August 2 and possibly never if the course fills with Business School students first and stays full.

1.4 Fall 2015 Schedule (Mobile/Single Column Format)

The following courses will (tentatively) be held during the Fall 2015 semester.

- *CSIS Courses*

1.4.2 Undergraduate Courses

1.4.3 COMP111-01W: History of Computing

Instructor: George Thiruvathukal

Location: LSC

Schedule: 12:35:00 PM - 1:25:00 PM (MWF)

Course Description: [COMP 111: History of Computing](#)

1.4.4 COMP125-001: Visual Information Processing

Instructor: Channah Naiman

Location: LSC

Schedule: 1:00:00 PM - 2:15:00 PM (TTr)

Course Description: [COMP 125: Visual Information Processing](#)

1.4.5 COMP125-002: Visual Information Processing

Instructor: Channah Naiman

Location: LSC

Schedule: 4:15:00 PM - 6:45:00 PM (T)

Course Description: [COMP 125: Visual Information Processing](#)

Info: *Tentative, may not be offered*

1.4.6 COMP150-001: Introduction to Computing

Instructor: Dima Dligach

Location: LSC

Schedule: 2:45:00 PM - 4:00:00 PM (MW)

Course Description: [COMP 150: Introduction to Computing](#)

1.4.7 COMP150-002: Introduction to Computing

Instructor: Chandra N Sekharan

Location: LSC

Schedule: 11:30:00 AM - 12:45:00 PM (TTr)

Course Description: [COMP 150: Introduction to Computing](#)

1.4.8 COMP150-003: Introduction to Computing

Instructor: Grace (PT) Hopper

Location: LSC

Schedule: 12:35:00 PM - 1:25:00 PM (MWF)

Course Description: [COMP 150: Introduction to Computing](#)

1.4.9 COMP163-001: Discrete Structures

Instructor: Ronald I Greenberg

Location: LSC

Schedule: 11:30:00 AM - 12:20:00 PM (MWF)

Course Description: [COMP 163: Discrete Structures](#)

1.4.10 COMP163-002: Discrete Structures

Instructor: Ada (PT) Lovelace

Location: LSC

Schedule: 4:15:00 PM - 5:30:00 PM (MW)

Course Description: [COMP 163: Discrete Structures](#)

1.4.11 COMP163-003: Discrete Structures

Instructor: Ada (PT) Lovelace

Location: LSC

Schedule: 6:00:00 PM - 7:15:00 PM (MW)

Course Description: [COMP 163: Discrete Structures](#)

1.4.12 COMP170-001: Introduction to Object-Oriented Programming

Instructor: Robert Yacobellis

Location: LSC

Schedule: 10:00:00 AM - 11:15:00 AM (TTr)

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.4.13 COMP170-002: Introduction to Object-Oriented Programming

Instructor: Robert Yacobellis

Location: LSC

Schedule: 1:00:00 PM - 2:15:00 PM (TTr)

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.4.14 COMP170-003: Introduction to Object-Oriented Programming

Instructor: William Honig

Location: LSC

Schedule: 2:30:00 PM - 3:45:00 PM (TTr)

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.4.15 COMP170-004: Introduction to Object-Oriented Programming

Instructor: William Honig

Location: LSC

Schedule: 4:15:00 PM - 6:45:00 PM (T)

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.4.16 COMP170-01L: Introduction to Object-Oriented Programming

Instructor: Robert Yacobellis

Location: LSC

Schedule: 11:15:00 AM - 11:40:00 AM (TTr)

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.4.17 COMP170-02L: Introduction to Object-Oriented Programming

Instructor: Robert Yacobellis

Location: LSC

Schedule: 12:35:00 PM - 1:00:00 PM (TTr)

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.4.18 COMP170-03L: Introduction to Object-Oriented Programming

Instructor: William Honig

Location: LSC

Schedule: 3:45:00 PM - 4:05:00 PM (TTr)

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.4.19 COMP170-04L: Introduction to Object-Oriented Programming

Instructor: William Honig

Location: LSC

Schedule: 7:00:00 PM - 7:50:00 PM (T)

Course Description: [COMP 170: Introduction to Object-Oriented Programming](#)

1.4.20 COMP215-001: Object Oriented Programming with Mathematics

Instructor: Christine A Haught

Location: LSC

Schedule: 2:30:00 PM - 3:45:00 PM (TTr)

Course Description: [COMP 215: Object-Oriented Programming with Mathematics](#)

1.4.21 COMP250-01W: Introduction to Scientific and Technical Communication

Instructor: Roxanne Schwab

Location: LSC

Schedule: 2:45:00 PM - 4:00:00 PM (MW)

Course Description: [COMP 250: Introduction to Scientific and Technical Communication](#)

1.4.22 COMP251-001: Introduction to Database Systems

Instructor: Guy Bevente

Location: LSC

Schedule: 7:00:00 PM - 9:30:00 PM (M)

Course Description: [COMP 251: Introduction to Database Systems](#)

1.4.23 COMP264-001: Introduction to Computer Systems

Instructor: Ronald I Greenberg

Location: LSC

Schedule: 10:25:00 AM - 11:15:00 AM (MWF)

Course Description: [COMP 264: Introduction to Computer Systems](#)

1.4.24 COMP271-001: Data Structures: Algorithms and Applications

Instructor: Chandra N Sekharan

Location: WTC

Schedule: 2:30:00 PM - 3:45:00 PM (TTr)

Course Description: [COMP 271: Data Structures](#)

1.4.25 COMP271-002: Data Structures: Algorithms and Applications

Instructor: Maria Del Carmen Saenz

Location: LSC

Schedule: 6:00:00 PM - 8:30:00 PM (Tr)

Course Description: [COMP 271: Data Structures](#)

1.4.26 COMP271-01L: Data Structures: Algorithms and Applications

Instructor: Chandra N Sekharan

Location: WTC

Schedule: 3:45:00 PM - 4:05:00 PM (TTr)

Course Description: [COMP 271: Data Structures](#)

1.4.27 COMP271-02L: Data Structures: Algorithms and Applications

Instructor: Maria Del Carmen Saenz

Location: LSC

Schedule: 8:30:00 PM - 9:20:00 PM (Tr)

Course Description: [COMP 271: Data Structures](#)

1.4.28 COMP312-01E: Free/Open Source Computing

Instructor: George Thiruvathukal

Location: ONLN

Schedule: - ()

Course Description: [COMP 312: Free/Open Source Computing](#)

Note: This is an online class that includes synchronous and asynchronous interaction among students and Instructor. All sessions will be recorded. Specific synchronous meetings will be scheduled in consultation with students

1.4.29 COMP313-001: Intermediate Object-Oriented Development

Instructor: Konstantin Laufer

Location: LSC

Schedule: 2:45:00 PM - 5:15:00 PM (W)

Course Description: [COMP 313: Intermediate Object-Oriented Development](#)

1.4.30 COMP314-001: Problem Solving Seminar I

Instructor: Andrew N Harrington

Location: See below

Schedule: See below

Course Description: [COMP 314/315: Problem Solving Strategies](#)

There will be one organizational meeting Monday August 24, 3-4PM in LT 410, to agree on 5 weekend practice times through the end of October. See the [Programming Team](#), particularly if you cannot attend the organizational session.

1.4.31 COMP315-001: Problem Solving Seminar II

Instructor: Andrew N Harrington

Location: See below

Schedule: See below

Course Description: [COMP 314/315: Problem Solving Strategies](#)

There will be one organizational meeting Monday August 24, 3-4PM in LT 410, to agree on 5 weekend practice times through the end of October. See the [Programming Team](#), particularly if you cannot attend the organizational session.

1.4.32 COMP317-001: Social, Legal, and Ethical Issues in Computing

Instructor: Matthew Paul Butcher

Location: LSC

Schedule: 7:00:00 PM - 9:30:00 PM (T)

Course Description: [COMP 317: Social, Legal, and Ethical Issues in Computing](#)

1.4.33 COMP320-001: Software Systems Analysis

Instructor: Conrad Weisert

Location: WTC

Schedule: 4:15:00 PM - 6:45:00 PM (M)

Course Description: [COMP 320: Software Systems Analysis](#)

1.4.34 COMP331-001: Cryptography

Instructor: Stephen Doty

Location: LSC

Schedule: 9:20:00 AM - 10:10:00 AM (MWF)

Course Description: [COMP 331: Cryptography](#)

1.4.35 COMP336-001: Markup Languages

Instructor: Matthew William Bone

Location: WTC

Schedule: 7:00:00 PM - 9:30:00 PM (W)

Course Description: [COMP 336: Markup Languages](#)

1.4.36 COMP343-001: Intro to Computer Networks

Instructor: Peter L Dordal

Location: WTC

Schedule: 4:15:00 PM - 6:45:00 PM (T)

Course Description: [COMP 343: Introduction to Computer Networks](#)

1.4.37 COMP343-002: Intro to Computer Networks

Instructor: Peter L Dordal

Location: ONLN

Schedule: - ()

Course Description: [COMP 343: Introduction to Computer Networks](#)

Note: This is an online class that includes synchronous and asynchronous interaction among students and instructor. Participation in synchronous sessions is strongly recommended.

1.4.38 COMP347-001: Intrusion Detection and Computer Security

Instructor: Corby Schmitz

Location: WTC

Schedule: 5:45:00 PM - 8:15:00 PM (F)

Course Description: [COMP 347: Intrusion Detection and Computer Forensics](#)

1.4.39 COMP347-002: Intrusion Detection and Computer Security

Instructor: Corby Schmitz

Location: ONLN

Schedule: - ()

Course Description: [COMP 347: Intrusion Detection and Computer Forensics](#)

Note: This is an online class. The classroom session will be broadcast live on Friday evenings via AdobeConnect allowing online student interaction. Sessions will also be recorded and made available. Students may participate synchronously or asynchronously at their discretion.

1.4.40 COMP363-001: Design and Analysis Computer Algorithms

Instructor: Mark Albert

Location: LSC

Schedule: 2:45:00 PM - 5:15:00 PM (M)

Course Description: [COMP 363: Design and Analysis of Computer Algorithms](#)

1.4.41 COMP364-001: High-Performance Computing

Instructor: Sharan Kalwani

Location: WTC

Schedule: 7:00:00 PM - 9:30:00 PM (W)

Course Description: [COMP 364: High-Performance Computing](#)

1.4.42 COMP374-001: Intro to Operating Systems

Instructor: Sarah Kaylor

Location: LSC

Schedule: 7:00:00 PM - 9:30:00 PM (M)

Course Description: [COMP 374: Introduction to Operating Systems](#)

1.4.43 COMP381-001: Bioinformatics

Instructor: Heather Wheeler

Location: LSC

Schedule: 4:15:00 PM - 5:30:00 PM (TTr)

Course Description: [COMP 381: Bioinformatics](#)

1.4.44 COMP381-002: Bioinformatics

Instructor: Heather Wheeler

Location: LSC

Schedule: 4:15:00 PM - 6:45:00 PM (W)

Course Description: [COMP 381: Bioinformatics](#)

1.4.45 COMP388-001: RAD.NET

Instructor: Karim Kabani

Location: WTC

Schedule: 10:00:00 AM - 12:30:00 PM (Sa)

Course Description: [COMP 388: Topics in Computer Science](#)

1.4.46 COMP388-002: Machine Learning

Instructor: Mark Albert

Location: LSC

Schedule: 7:00:00 PM - 9:30:00 PM (Tr)

Course Description: [COMP 388: Topics in Computer Science](#)

1.4.47 COMP388-003: Metagenomics

Instructor: Catherine Putonti

Location: LSC

Schedule: 4:15:00 PM - 6:45:00 PM (T)

Course Description: [COMP 388: Topics in Computer Science](#)

1.4.48 COMP388-004: Foundations of CS 1

Instructor: Andrew N Harrington

Location: WTC

Schedule: This course is a compressed version of Comp 170 that meets for the first eight weeks of the semester, Mondays: 4:15 PM - 8:15 PM, replacing holiday/vacation Mondays with Fridays, also 4:15 PM - 8:15 PM. So the

Monday/Friday class schedule is: Mon Aug 24; Mon Aug 31; Fri Sep 11; Mon Sep 14; Mon Sept 21; Monday, Sept 28; Fri Oct 9; Mon Oct 12. It also meets eight consecutive Thursdays: 4:15 PM -6:30 PM, Aug 27 - Oct 15.

Course Description: [COMP 388: Topics in Computer Science](#)

1.4.49 COMP388-005: Foundations of CS 2

Instructor: Peter L Dordal

Location: WTC

Schedule: This course is a compressed version of Comp 271 that meets for the last 8 weeks of the semester, Mondays Oct 19-Dec 7 (4:15-8:15PM) and also Thursdays Oct 22 - Dec 10 (4:15-6:30PM) excluding Thurs Nov 26, Thanksgiving.

Course Description: [COMP 388: Topics in Computer Science](#)

1.4.50 COMP388-422: Software Development for Wireless/Mobile Devices

Instructor: Dima Dligach

Location: LSC

Schedule: 2:45:00 PM - 5:15:00 PM (F)

Course Description: [COMP 388: Topics in Computer Science](#)

1.4.51 COMP388-424: Client-Side Web Design

Instructor: Nicholas Hayward

Location: WTC

Schedule: 4:15:00 PM - 6:45:00 PM (Tr)

Course Description: [COMP 388: Topics in Computer Science](#)

1.4.52 COMP388-433: Web Services Programming

Instructor: Berhane Zewdie

Location: WTC

Schedule: 7:00:00 PM - 9:30:00 PM (T)

Course Description: [COMP 388: Topics in Computer Science](#)

1.4.53 COMP390-01E: Broaden Particip STEM (Computing, Math & Science)

Instructor: Ronald I Greenberg

Location: LSC

Schedule: 1:40:00 PM - 2:30:00 PM (MW)

Course Description: [COMP 390: Broadening Participation in STEM \(Computing, Math & Science\)](#)

1.4.54 COMP391-01E: Internship in CS

Instructor: Robert Yacobellis

Location: WTC

Schedule: - ()

Course Description: COMP 391: Internship in Computer Science

1.4.55 COMP398-01E: Independent Study

Instructor: Konstantin Laufer

Location: WTC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.56 COMP398-02E: Independent Study

Instructor: Mark Albert

Location: WTC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.57 COMP398-03E: Independent Study

Instructor: Peter L Dordal

Location: WTC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.58 COMP398-04E: Independent Study

Instructor: Ronald I Greenberg

Location: LSC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.59 COMP398-05E: Independent Study

Instructor: Andrew N Harrington

Location: WTC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.60 COMP398-06E: Independent Study

Instructor: William Honig

Location: WTC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.61 COMP398-07E: Independent Study

Instructor: Channah Naiman

Location: WTC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.62 COMP398-08E: Independent Study

Instructor: Catherine Putonti

Location: LSC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.63 COMP398-09E: Independent Study

Instructor: Chandra N Sekharan

Location: WTC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.64 COMP398-10E: Independent Study

Instructor: Robert Yacobellis

Location: WTC

Schedule: - ()

Course Description: COMP 398: Independent Study

1.4.65 COMP399-001: Computer Science Seminar

Instructor: Mark Albert

Location: LSC

Schedule: 12:35:00 PM - 1:25:00 PM (F)

Course Description: COMP 399: Computer Science Seminar

1.4.66 Graduate Courses

1.4.67 COMP410-001: Operating Systems

Instructor: Sarah Kaylor

Location: LSC

Schedule: 7:00:00 PM - 9:30:00 PM (M)

Course Description: [COMP 410: Operating Systems](#)

1.4.68 COMP412-001: Free/Open Source Computing

Instructor: George Thiruvathukal

Location: ONLN

Schedule: - ()

Course Description: [COMP 412: Free/Open Source Computing](#)

1.4.69 COMP413-001: Intermediate Object-Oriented Development

Instructor: Robert Yacobellis

Location: WTC

Schedule: 4:15:00 PM - 6:45:00 PM (T)

Course Description: [COMP 413: Intermediate Object-Oriented Development](#)

1.4.70 COMP417-001: Social and Ethical Issues in Computing

Instructor: Roxanne Schwab

Location: **LSC**

Schedule: 4:15:00 PM - 6:45:00 PM (W)

Course Description: [COMP 417: Social, Legal, and Ethical Issues in Computing](#)

[COMP420-001: Software Systems Analysis](#)

Students needing to get to a 7PM WTC class will be allowed to leave early.

Instructor: Conrad Weisert

Location: WTC

Schedule: 4:15:00 PM - 6:45:00 PM (M)

Course Description: [COMP 420: Software Systems Analysis](#)

1.4.71 COMP422-001: Software Development for Wireless/Mobile Devices

Instructor: Dima Dligach

Location: LSC

Schedule: 2:45:00 PM - 5:15:00 PM (F)

Course Description: [COMP 422: Software Development for Wireless/Mobile Devices](#)

1.4.72 COMP424-001: Client-Side Web Design

Instructor: Nicholas Hayward

Location: WTC

Schedule: 4:15:00 PM - 6:45:00 PM (Tr)

Course Description: [COMP 424: Client-Side Web Design](#)

1.4.73 COMP431-001: Cryptography

Instructor: Stephen Doty

Location: LSC

Schedule: 9:20:00 AM - 10:10:00 AM (MWF)

Course Description: [COMP 431: Cryptography](#)

1.4.74 COMP433-001: Web Services Programming

Instructor: Berhane Zewdie

Location: WTC

Schedule: 7:00:00 PM - 9:30:00 PM (T)

Course Description: [COMP 433: Web Services Programming](#)

1.4.75 COMP436-001: Markup Languages

Instructor: Matthew William Bone

Location: WTC

Schedule: 7:00:00 PM - 9:30:00 PM (W)

Course Description: [COMP 436: Markup Languages](#)

1.4.76 COMP443-001: Computer Networks

Instructor: Peter L Dordal

Location: WTC

Schedule: 4:15:00 PM - 6:45:00 PM (T)

Course Description: [COMP 443: Computer Networks](#)

1.4.77 COMP443-002: Computer Networks

Instructor: Peter L Dordal

Location: ONLN

Schedule: - ()

Course Description: [COMP 443: Computer Networks](#)

Info: This is an online class that includes synchronous and asynchronous interaction among students and instructor. Participation in synchronous sessions is strongly recommended.

1.4.78 COMP447-001: Intrusion Detection and Computer Forensics

Instructor: Corby Schmitz

Location: WTC

Schedule: 5:45:00 PM - 8:15:00 PM (F)

Course Description: [COMP 447: Intrusion Detection and Computer Forensics](#)

1.4.79 COMP447-002: Intrusion Detection and Computer Forensics

Instructor: Corby Schmitz

Location: ONLN

Schedule: - ()

Course Description: [COMP 447: Intrusion Detection and Computer Forensics](#)

Note: This is an online class. The classroom session will be broadcast live on Friday evenings via AdobeConnect allowing online student interaction. Sessions will also be recorded and made available. Students may participate synchronously or asynchronously at their discretion.

1.4.80 COMP453-001: Database Programming

Instructor: Channah Naiman

Location: WTC

Schedule: 7:00:00 PM - 9:30:00 PM (Tr)

Course Description: [COMP 453: Database Programming](#)

1.4.81 COMP453-002: Database Programming

Instructor: Channah Naiman

Location: ONLN

Schedule: - ()

Course Description: [COMP 453: Database Programming](#)

Note: This is an online class. All lectures will be recorded. Students may be asked to attend smaller-group online interactive discussions during the semester.

1.4.82 COMP464-001: High-Performance Computing

Instructor: Sharan Kalwani

Location: WTC

Schedule: 7:00:00 PM - 9:30:00 PM (W)

Course Description: [COMP 464: High-Performance Computing](#)

1.4.83 COMP488-001: RAD.NET

Instructor: Karim Kabani

Location: WTC

Schedule: 10:00:00 AM - 12:30:00 PM (Sa)

Course Description: [COMP 488: Topics in Computer Science](#)

1.4.84 COMP488-002: Machine Learning

Instructor: Mark Albert

Location: LSC

Schedule: 7:00:00 PM - 9:30:00 PM (Tr)

Course Description: [COMP 488: Topics in Computer Science](#)

1.4.85 COMP488-003: Metagenomics

Instructor: Catherine Putonti

Location: LSC

Schedule: 4:15:00 PM - 6:45:00 PM (T)

Course Description: [COMP 488: Topics in Computer Science](#)

1.4.86 COMP488-381: Bioinformatics

Instructor: Heather Wheeler

Location: LSC

Schedule: 4:15:00 PM - 5:30:00 PM (TTr)

Course Description: [COMP 488: Topics in Computer Science](#)

1.4.87 COMP488-382: Bioinformatics

Instructor: Heather Wheeler

Location: LSC

Schedule: 4:15:00 PM - 6:45:00 PM (W)

Course Description: [COMP 488: Topics in Computer Science](#)

1.4.88 COMP490-001: Independent Project

Instructor: Konstantin Laufer

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.89 COMP490-002: Independent Project

Instructor: Mark Albert

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.90 COMP490-003: Independent Project

Instructor: Peter L Dordal

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.91 COMP490-004: Independent Project

Instructor: Ronald I Greenberg

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.92 COMP490-005: Independent Project

Instructor: Andrew N Harrington

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.93 COMP490-006: Independent Project

Instructor: William Honig

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.94 COMP490-007: Independent Project

Instructor: Channah Naiman

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.95 COMP490-008: Independent Project

Instructor: Catherine Putonti

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.96 COMP490-009: Independent Project

Instructor: Chandra N Sekharan

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.97 COMP490-010: Independent Project

Instructor: Robert Yacobellis

Location: WTC

Schedule: - ()

Course Description: COMP 490: Independent Project

1.4.98 COMP499-001: Internship

Instructor: Andrew N Harrington

Location: WTC

Schedule: - ()

Course Description: COMP 499: Internship

1.4.99 COMP499-002: Internship

Instructor: Andrew N Harrington

Location: WTC

Schedule: - ()

Course Description: COMP 499: Internship

1.4.100 COMP605-001: Master of Science Study

Instructor: Andrew N Harrington

Location: WTC

Schedule: - ()

Course Description: COMP 605: Master of Science Study

1.4.101 CSIS Courses

1.4.102 CSIS494-001: Data Mining

Instructor: Mary Malliaris (ISOM faculty)

Location: WTC

Schedule: 6-9PM, M - quarter course INFS 494

Course Description: CSIS 494: Data Mining

Any CSIS courses will not open for our students until at least after August 2 and possibly never if the course fills with Business School students first and stays full.

1.5 Summer 2015 Schedule

The CAS has posted the course schedule for Summer 2015.

Note that Independent Study and Internships can be taken during any session (A, B, or C) with B being the most popular choice as grades are posted later.

The schedule can be found here: <http://www.luc.edu/summer/courses/cas/> (scroll down the page to the Computer Science Schedule).

If you wish to look forward further, see

1.6 COMP Courses Long-Term Schedule

1.6.1 Effective Fall 2014 - Subject to Change

Loyola University Chicago - Department of Computer Science

Version 2015.3, 8 Sep 2015

1.6.2 Category I: every fall and spring semester

COMP 111: History of Computing (*writing-intensive*) (starting spring 2016)

COMP 125: Visual Information Processing (1-2)

COMP 150: Introduction to Computing (3)

COMP 163: Discrete Structures (1-3)

COMP 170: Introduction to Object-Oriented Programming (3-4)

COMP 215: Object-Oriented Programming with Mathematics (*offered by Math/Stat Department in fall, CS department in spring*)

COMP 250: Introduction to Scientific and Technical Communication (*writing-intensive*) (1-2)

COMP 264: Introduction to Computer Systems

COMP 271: Data Structures (2)

COMP 312: Free/Open Source Computing / COMP 412: Free/Open Source Computing (fall: online, spring: on-campus)

COMP 313: Intermediate Object-Oriented Development

COMP 317: Social, Legal, and Ethical Issues in Computing (fall: online, spring: online and on-campus/WI)

COMP 363: Design and Analysis of Computer Algorithms

COMP 388: Foundations of Computer Science 1 (*graduate only*)

COMP 388: Foundations of Computer Science 2 (*graduate only*)

COMP 399: Computer Science Seminar

COMP 413: Intermediate Object-Oriented Development

COMP 417: Social, Legal, and Ethical Issues in Computing (fall: on-campus, spring: online)

COMP 324: Client-Side Web Development / COMP 424: Client-Side Web Design (starting spring 2016)

1.6.3 Category IIa: every fall semester

COMP 251: Introduction to Database Systems

COMP 314/315: Problem Solving Strategies

COMP 333: Formal Methods in Software Engineering / COMP 488: Topics in Computer Science : Formal Methods in Software Engineering (starting fall 2016)

COMP 336: Markup Languages / COMP 436: Markup Languages

COMP 343: Introduction to Computer Networks / COMP 443: Computer Networks (on-campus and online)

COMP 347: Intrusion Detection and Computer Forensics / COMP 447: Intrusion Detection and Computer Forensics (on-campus and online)

COMP 374: Introduction to Operating Systems / COMP 410: Operating Systems

COMP 381: Bioinformatics / COMP 488: Topics in Computer Science : Bioinformatics

COMP 384: Metagenomics / COMP 488: Topics in Computer Science : Metagenomics

COMP 322: Software Development for Wireless/Mobile Devices / COMP 422: Software Development for Wireless/Mobile Devices (starting fall 2015)

COMP 344: Web Services Programming / COMP 433: Web Services Programming (starting fall 2015)

COMP 388: Topics in Computer Science / COMP 488: Topics in Computer Science : Rapid Application Development Methodology (.NET)

COMP 379: Machine Learning / COMP 488: Topics in Computer Science : Machine Learning (starting fall 2015)

COMP 390: Broadening Participation in STEM (Computing, Math & Science) : Broadening Participation in STEM (Science, Technology, Engineering & Math)

COMP 453: Database Programming (on-campus and online)

1.6.4 Category IIb: every spring semester

COMP 122: Introduction to Digital Music

COMP 300: Data Warehousing and Data Mining / COMP 488: Topics in Computer Science : Data Warehousing and Data Mining (on-campus and online)

COMP 305: Database Administration / COMP 488: Topics in Computer Science : Database Administration

COMP 330: Software Engineering

COMP 339: Distributed Systems / COMP 439: Distributed Systems (starting spring 2016)

COMP 340: Computer Forensics / COMP 488: Topics in Computer Science : Computer Forensics

COMP 348: Network Security / COMP 448: Network Security (on-campus and online)

COMP 353: Database Programming

COMP 372: Programming Languages / COMP 471: Programming Languages

COMP 373: Objects, Frameworks, and Patterns / COMP 473: Object-Oriented Programming (starting spring 2016)

COMP 377: IT Project Management / COMP 477: IT Project Management

COMP 378: Artificial Intelligence / COMP 484: Artificial Intelligence

COMP 341: Human-Computer Interaction / COMP 441: Human-Computer Interface Design

COMP 397: Research Seminar

COMP 460: Algorithms and Complexity

COMP 474: Software Engineering

COMP 488: Topics in Computer Science : Introduction to Digital Humanities Design & Programming

HONR 204H: Science and Society

1.6.5 Category III: every three semesters

Currently N/A

1.6.6 Category IVa: every odd spring semester (spring 15, spring 17, ...)

COMP 366: Microcomputer Design and Interfacing / COMP 450: Microcomputer Design and Interfacing

COMP 386: Computational Neuroscience / COMP 488: Topics in Computer Science : Computational Neuroscience

1.6.7 Category IVb: every odd fall semester (fall 15, fall 17, ...)

COMP 320: Software Systems Analysis / COMP 420: Software Systems Analysis (starting fall 2015)

COMP 364: High-Performance Computing / COMP 464: High-Performance Computing

1.6.8 Category IVc: every even spring semester (spring 16, spring 18, ...)

COMP 383: Computational Biology / COMP 488: Topics in Computer Science : Computational Biology

COMP 388: Topics in Computer Science / COMP 488: Topics in Computer Science : Robotics Software Development

1.6.9 Category IVd: every even fall semester (fall 14, fall 16, ...)

COMP 370: Software Quality, Metrics, and Testing / COMP 488: Topics in Computer Science : Software Quality and Testing

COMP 346: Introduction to Telecommunications / COMP 446: Telecommunications

1.6.10 Category IVe: summer

COMP 125: Visual Information Processing (online)

COMP 150: Introduction to Computing (online)

COMP 170: Introduction to Object-Oriented Programming (online)

COMP 312: Free/Open Source Computing / COMP 412: Free/Open Source Computing (online)

COMP 317: Social, Legal, and Ethical Issues in Computing / COMP 417: Social, Legal, and Ethical Issues in Computing

COMP 346: Introduction to Telecommunications / COMP 446: Telecommunications (odd summers)

COMP 349: Wireless Networks and Security / COMP 449: Wireless Networks and Security (on-campus and/or online)

COMP 351: Network Management / COMP 451: Network Management (even summers)

Additional summer classes are typically selected from *Category I: every fall and spring semester* and *Category V: offered irregularly*, along with high-demand courses from other categories.

All summer classes are pending instructor availability and meeting enrollment thresholds.

1.6.11 Category IVf: January term

COMP 125: Visual Information Processing (online)

1.6.12 Category V: offered irregularly

COMP 171: Scripting Languages (last offered spring 12)

COMP 338: Server-Based Software Development / COMP 442: Server-Side Software Development

COMP 362: Computer Architecture / COMP 462: Computer Architecture (last offered spring 98)

COMP 380: Introduction to Computer Graphics / COMP 480: Computer Graphics (last offered spring 05)

COMP 382: Introduction to Compilers / COMP 472: Compiler Construction (last offered spring 00)

COMP 388: Topics in Computer Science / COMP 434: Enterprise Software Development

COMP 388: Topics in Computer Science / COMP 475: System Standards and Requirements

1.6.13 Category VI: Courses offered by the Department of Mathematics and Statistics

COMP 309: Numerical Methods / COMP 409: Advanced Numerical Analysis (last offered fall 11)

COMP 418: Combinatorial Mathematics (last offered spring 14)

COMP 328: Algebraic Coding Theory / COMP 428: Algebraic Coding Theory (last offered spring 14)

COMP 331: Cryptography / COMP 431: Cryptography (last offered fall 15)

COMP 356: Computer Principles of Modeling & Simulation / COMP 421: Mathematical Modeling and Simulation (last offered fall 13)

COMP 376: Formal Languages and Automata / COMP 476: Formal Languages and Automata (last offered fall 14)

1.6.14 Category VII: Courses offered by the Quinlan School of Business

All CSIS courses are offered and scheduled by the Department of Information Systems and Operations Management and Department of Management in the Quinlan School of Business. The number of available seats in each CSIS section is limited. Below is a tentative list of current and upcoming offerings; be sure to check [LOCUS](#) for up-to-date information on these offerings.

[CSIS 472: Organizational Change and Development](#) (MGMT 472, spring quarter, Feb-May): Opens two weeks after Quinlan registration opens

[CSIS 483: Management of Service Operations](#) (OPMG 483, winter quarter, Nov-Feb, and spring quarter, Feb-May): Opens two weeks after Quinlan registration opens

[CSIS 494: Data Mining](#) (INFS 494, fall quarter, Aug-Nov): Opens two weeks after Quinlan registration opens

[CSIS 794: Managing Emerging Technologies](#) (INFS 799, spring quarter, Feb-May): Opens on the first day of Quinlan registration

[CSIS 796: Data Warehousing](#) (INFS 796, spring quarter, Feb-May): Opens on the first day of Quinlan registration

The following courses are not available to students in the Department of Computer Science at this time:

CSIS/MGMT 478

CSIS/ISOM 484 ([CSIS 484: Project Management](#)): Please take [COMP 477: IT Project Management](#) instead.

CSIS/INFS 496 ([CSIS 496: Systems Analysis and Design](#)): Please take [COMP 420: Software Systems Analysis](#) instead.

CSIS/INFS 498

CSIS/INFS 591

CSIS/INFS 793

UNDERGRADUATE DEGREE PROGRAMS

2.1 B.S. in Bioinformatics

2.1.1 Overview

The field of Bioinformatics is rooted in the massive databases generated by worldwide DNA sequencing projects and by ever widening 3-dimensional protein structure studies. Mining the wealth of biological and chemical information contained in these databases requires the tools of computer science and statistics. Bioinformatics approaches have already led to countless scientific, medical, and agricultural breakthroughs that would have taken decades to achieve without the foresight of a small number of visionary scientists and programmers. This major provides students with the training, skills, and opportunity to become charter members of this exciting, ground-breaking discipline with virtually limitless post-graduate educational and career advancement possibilities for years to come. Loyola is home to a superb group of faculty members already working at the interfaces of these four disciplines, who are combining their expertise to offer students this unique educational opportunity. This interdisciplinary major has its own detailed web pages at <http://www.luc.edu/bioinformatics>.

2.1.2 Curriculum

Please see http://www.luc.edu/bioinformatics/academics_bs.shtml.

2.2 B.S. in Communication Networks and Security

2.2.1 Overview

This new major grows out of the enormous importance of network computing and the major challenges to security that these networks pose. Students examine the architecture, properties, management and performance of both wired and wireless networks, including how to keep them reliable and secure. Students gain the talents and skills necessary for success in today's organizations according to current industry practices: planning, designing, implementing and administering voice and data communication networks; assessing and implementing the communication and security requirements of an organization in the form of a secure communication infrastructure; and functioning as an effective member of a network and security services division in an organization.

The Department of Labor projects a 57% (106,000) increase in the demand for Network systems and data communications analysts and a 37% increase (94,000) in Network and computer systems administrators over a 10 years period.

2.2.2 Curriculum

If you enrolled prior to Fall 2013 you may use the old Communication Networks and Security B.S. curriculum located [here](#).

Major Requirements (48 Credit Hours)

One of the following must be taken:

- [MATH 131: Applied Calculus I](#)
- [MATH 161: Calculus I](#)

One of the following must be taken:

- [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 215: Object-Oriented Programming with Mathematics](#)

One of the following must be taken:

- [COMP 264: Introduction to Computer Systems](#)
- [COMP 271: Data Structures](#)

All of the following must be taken:

- [COMP 163: Discrete Structures](#)
- [COMP 317: Social, Legal, and Ethical Issues in Computing](#)
- [COMP 343: Introduction to Computer Networks](#)
- [COMP 347: Intrusion Detection and Computer Forensics](#)
- [COMP 348: Network Security](#)

Practicum Capstone

Six (6) credits taken from one or more of [COMP 390: Broadening Participation in STEM \(Computing, Math & Science\)](#), [COMP 391: Internship in Computer Science](#), and [COMP 398: Independent Study](#). See the details of registering in the links for each course. (See also individual degree requirements, which generally permit three additional units beyond the practicum to be counted as an elective, as long as you take no more than 6 units of 391 and no more than 6 units of 398.) Students are encouraged to complete these credits during junior and senior years to draw on prior experience.

Electives

18 credits taken from:

- [COMP 250: Introduction to Scientific and Technical Communication](#) or [ENGL 210: Business Writing](#)
- [COMP 264: Introduction to Computer Systems](#) or [COMP 271: Data Structures](#) NOTE: You must take one of these classes as part of the Major requirements. The second one can be used as an elective if taken.
- [ISOM 349: Project Management](#)
- Any COMP 300 level courses NOTE: A special case is [COMP 390: Broadening Participation in STEM \(Computing, Math & Science\)](#), [COMP 391: Internship in Computer Science](#) and [COMP 398: Independent Study](#) : Three additional units beyond the practicum can be counted as an elective, as long as you take no more than 6 units of 391 and no more than 6 units of 398.

Suggested Ordering of Courses

Year 1

- MATH 131: Applied Calculus I or MATH 161: Calculus I
- COMP 163: Discrete Structures
- COMP 170: Introduction to Object-Oriented Programming

Year 2

- COMP 264: Introduction to Computer Systems or COMP 271: Data Structures
- COMP 317: Social, Legal, and Ethical Issues in Computing
- Electives

Year 3

- COMP 343: Introduction to Computer Networks
- COMP 347: Intrusion Detection and Computer Forensics
- COMP 348: Network Security
- Electives

Year 4

- Electives
- Practicum

2.3 B.S. in Computer Science

2.3.1 Overview

The B.S. degree program in computer science provides a balance between theoretical foundations and applied computer science with the ultimate goal of presenting knowledge likely to be of ongoing value throughout one's career. The preparation of the B.S. is aimed at students who want pursue a career as an industry practitioners and/or as an academic.

2.3.2 Curriculum

If you enrolled prior to Fall 2013 you may use the old Computer Science B.S. curriculum located [here](#).

Major Requirements (51 Credit Hours)

Both of the following must be taken:

- MATH 161: Calculus I
- MATH 162: Calculus II

One of the following must be taken:

- COMP 170: Introduction to Object-Oriented Programming
- COMP 215: Object-Oriented Programming with Mathematics

One of the following must be taken:

- [COMP 372: Programming Languages](#)
- [COMP 374: Introduction to Operating Systems](#)

All of the following must be taken:

- [COMP 163: Discrete Structures](#)
- [COMP 264: Introduction to Computer Systems](#)
- [COMP 271: Data Structures](#)
- [COMP 313: Intermediate Object-Oriented Development](#)
- [COMP 317: Social, Legal, and Ethical Issues in Computing](#)
- [COMP 363: Design and Analysis of Computer Algorithms](#)

Practicum Capstone

Six (6) credits taken from one or more of [COMP 390: Broadening Participation in STEM \(Computing, Math & Science\)](#), [COMP 391: Internship in Computer Science](#), and [COMP 398: Independent Study](#). See the details of registering in the links for each course. (See also individual degree requirements, which generally permit three additional units beyond the practicum to be counted as an elective, as long as you take no more than 6 units of 391 and no more than 6 units of 398.) Students are encouraged to complete these credits during junior and senior years to draw on prior experience.

Electives

13 Credits taken from:

- [COMP 250: Introduction to Scientific and Technical Communication](#) or [ENGL 210: Business Writing](#)
- [ISOM 349: Project Management](#)
- Any COMP 300 level electives NOTE: A special case is [COMP 390: Broadening Participation in STEM \(Computing, Math & Science\)](#), [COMP 391: Internship in Computer Science](#) and [COMP 398: Independent Study](#) : Three additional units beyond the practicum can be counted as an elective, as long as you take no more than 6 units of 391 and no more than 6 units of 398.

Suggested Ordering of Courses

Year 1

- [MATH 161: Calculus I](#) and [MATH 162: Calculus II](#)
- [COMP 163: Discrete Structures](#)
- [COMP 170: Introduction to Object-Oriented Programming](#)

Year 2

- [COMP 264: Introduction to Computer Systems](#)
- [COMP 271: Data Structures](#)
- [COMP 313: Intermediate Object-Oriented Development](#)
- [COMP 317: Social, Legal, and Ethical Issues in Computing](#)

Year 3

- COMP 372: Programming Languages
- COMP 363: Design and Analysis of Computer Algorithms
- Electives

Year 4

- COMP 374: Introduction to Operating Systems
- Electives
- Practicum

2.4 B.S. in Mathematics and Computer Science

2.4.1 Overview

Many parts of computer science, including scientific computing, analysis of algorithms, and advanced research, use much mathematics. This major is for those people who want this highly analytical direction.

2.4.2 Curriculum

Math Requirements

Two years of Calculus

- MATH 161: Calculus I
- MATH 162: Calculus II
- MATH 263: Multivariable Calculus
- MATH 264: Ordinary Differential Equations

Including Multivariable Calculus, and Differential Equations.

- MATH 201: Elementary Number Theory
- MATH 212: Linear Algebra
- MATH 313: Abstract Algebra
- MATH 351: Introduction to Real Analysis I
- MATH 304: Probability and Statistics I / STAT 304: Probability and Statistics I

Two of the following five courses:

- MATH 309: Numerical Methods / COMP 309: Numerical Methods
- MATH 314: Advanced Topics in Abstract Algebra
- MATH 315: Advanced Topics in Linear Algebra
- MATH 352: Introduction to Real Analysis II
- MATH 353: Introductory Complex Analysis

Computer Science Requirements

- COMP 150: Introduction to Computing (may be replaced by a 300-level classroom elective if COMP 215: Object-Oriented Programming with Mathematics is taken)
- Introduction to Object-Oriented Programming & Data Structures
 - Either COMP 170: Introduction to Object-Oriented Programming
 - OR COMP 215: Object-Oriented Programming with Mathematics
- COMP 264: Introduction to Computer Systems
- COMP 271: Data Structures

One of the following three courses:

- COMP 313: Intermediate Object-Oriented Development
- COMP 363: Design and Analysis of Computer Algorithms
- COMP 376: Formal Languages and Automata

One of the following six courses:

- COMP 336: Markup Languages
- COMP 337: Introduction to Concurrency
- COMP 338: Server-Based Software Development
- COMP 339: Distributed Systems
- COMP 353: Database Programming
- COMP 373: Objects, Frameworks, and Patterns

Electives

- Any two 300-level, 3-credit courses in Computer Science.

2.5 B.S. in Physics and Computer Science

2.5.1 Overview

Physics is understood in terms of many mathematical relationships that are much easier to state than solve, and computer science has become a major part of many physicists' work to solve enormous problems. This major is preparation for graduate study in physics, applied physics, computer science, and especially in the burgeoning research field of computational physics, as well as in many branches of engineering. Employment opportunities are in industry, R&D and manufacturing, research and teaching in academic institutions, and research in government and private laboratories.

2.5.2 Curriculum

Math Requirements

Two years of Calculus

- MATH 161: Calculus I

- MATH 162: Calculus II
- MATH 263: Multivariable Calculus
- MATH 264: Ordinary Differential Equations

Computer Science Requirements

- COMP 150: Introduction to Computing (may be replaced by a 300-level classroom elective if COMP 215: Object-Oriented Programming with Mathematics is taken)
- Introduction to Object-Oriented Programming & Data Structures
 - Either COMP 170: Introduction to Object-Oriented Programming
 - OR COMP 215: Object-Oriented Programming with Mathematics
- COMP 264: Introduction to Computer Systems
- COMP 271: Data Structures
- COMP 313: Intermediate Object-Oriented Development OR COMP 363: Design and Analysis of Computer Algorithms OR COMP 376: Formal Languages and Automata

One course from the following list of programming-intensive CS courses:

- COMP 336: Markup Languages
- COMP 337: Introduction to Concurrency
- COMP 338: Server-Based Software Development
- COMP 339: Distributed Systems
- COMP 353: Database Programming
- COMP 373: Objects, Frameworks, and Patterns

Electives

- Any three 300-level, 3-credit courses in Computer Science.

Physics Requirements

- PHYS 125: General Physics I
- PHYS 126: General Physics II
- PHYS 135: General Physics Lab I
- PHYS 136: General Physics Lab II
- PHYS 235: Modern Physics
- PHYS 237: Modern Physics Lab
- PHYS 303: Electronics I
- PHYS 310: Optics
- PHYS 314: Theoretical Mechanics I
- PHYS 328: Thermal Physics & Statistical Mechanics

- PHYS 351: Electricity & Magnetism I

2.6 B.S. in Information Technology

2.6.1 Overview

This major prepares students who plan to design, create, and administer large information bases used by organizations.

Enterprises have an ever-growing investment in the exploding quantity of information, especially in web related data, that requires increasingly sophisticated approaches for efficient access and productive use. Students gain the talents and skills to be successful in today's organizations following current industry practices: planning, designing, implementing and administering data information and knowledge bases that can be effectively mined; assessing the information and data requirements of an organization and implementing these requirements as an information system; and functioning as an effective member of an information services division in an organization.

2.6.2 Curriculum

If you enrolled prior to Fall 2013 you may use the old Information Technology B.S. Curriculum located [here](#).

Major Requirements (48 Credit Hours)

One of the following must be taken:

- STAT 103: Fundamentals of Statistics
- STAT 203: Statistics
- ISOM 241: Business Statistics
- PSYC 304: Statistics

One of the following must be taken:

- COMP 125: Visual Information Processing
- COMP 150: Introduction to Computing
- COMP 170: Introduction to Object-Oriented Programming
- COMP 215: Object-Oriented Programming with Mathematics

One of the following must be taken:

- COMP 251: Introduction to Database Systems
- COMP 271: Data Structures

All of the following must be taken:

- COMP 163: Discrete Structures
- COMP 300: Data Warehousing and Data Mining
- COMP 305: Database Administration
- COMP 317: Social, Legal, and Ethical Issues in Computing
- COMP 353: Database Programming
- COMP 377: IT Project Management or ISOM 349: Project Management

Practicum Capstone

Six (6) credits taken from one or more of [COMP 390: Broadening Participation in STEM \(Computing, Math & Science\)](#), [COMP 391: Internship in Computer Science](#), and [COMP 398: Independent Study](#). See the details of registering in the links for each course. (See also individual degree requirements, which generally permit three additional units beyond the practicum to be counted as an elective, as long as you take no more than 6 units of 391 and no more than 6 units of 398.) Students are encouraged to complete these credits during junior and senior years to draw on prior experience.

Electives

15 credits taken from:

- [COMP 250: Introduction to Scientific and Technical Communication](#) or [ENGL 210: Business Writing](#)
- [COMP 251: Introduction to Database Systems](#) or [COMP 271: Data Structures](#) NOTE: You must take one of these classes as part of the Major requirements. The second one can be used as an elective if taken.
- [COMP 264: Introduction to Computer Systems](#)
- [MGMT 304: Strategic Management](#)
- [MGMT 315: International Management](#)
- [MGMT 318: Organizational Development and Change](#)
- [MGMT 320: Leading and Managing Team](#)
- [MGMT 335: Micro-enterprise Consulting](#)
- [MGMT 360: Values Based Leadership](#)
- [ENTR 310: Innovation and Entrepreneurship](#)
- Any COMP 300 level electives NOTE: A special case is [COMP 390: Broadening Participation in STEM \(Computing, Math & Science\)](#), [COMP 391: Internship in Computer Science](#) and [COMP 398: Independent Study](#) : Three additional units beyond the practicum can be counted as an elective, as long as you take no more than 6 units of 391 and no more than 6 units of 398.

Suggested Ordering of Courses

Year 1

- [ISOM 241: Business Statistics](#) or [\(PSYC 304: Statistics after core PSYC 101: General Psychology\)](#)
- [COMP 163: Discrete Structures](#)
- [COMP 125: Visual Information Processing](#) or [COMP 150: Introduction to Computing](#) or [COMP 170: Introduction to Object-Oriented Programming](#)

Year 2

- [COMP 251: Introduction to Database Systems](#) or [COMP 271: Data Structures](#)
- [COMP 317: Social, Legal, and Ethical Issues in Computing](#)
- Electives

Year 3

- [COMP 300: Data Warehousing and Data Mining](#)
- [COMP 305: Database Administration](#)

- [COMP 353: Database Programming](#)
- Electives

Year 4

- Electives
- Practicum

2.7 B.S. in Software Engineering

2.7.1 Overview

With software applications of enormous size, complexity, and expense now prevalent in diverse domains, software engineering has never been as important a field as it is now. Students gain necessary talents to be successful in today's organizations, following current industry practices: designing and developing software; understanding and applying software development processes and methodologies in their work; leveraging software development tools used in the various phases of the development life cycle; and functioning as an effective member of a software development team or organization. Students develop their knowledge and skill through high-level electives where they write major projects in diverse areas such as client/server programming for the web, distributed programming for large clusters of processors, database programming, and markup language transformation. While working on modern applications with current software engineering practices such as Extreme Programming, students learn to analyze and apply good algorithms and other relevant tools.

The department of Labor estimates there will be a 39% (184,000) increase in demand for Computer Systems Analysts in the next ten years. And in the recent projections of job growth by the National Association of Colleges and Employers (NACE), new hires are on the upswing for software design and development graduates in particular, with an average starting salary of \$57,729.

2.7.2 Curriculum

This Degree was previously known as Software Development.

If you were enrolled prior to Fall 2013 you may use the curriculum for the old B.S. Software Development Degree, which can be found [here](#).

Major Requirements (48 Credit Hours)

One of the following must be taken:

- [MATH 131: Applied Calculus I](#)
- [MATH 161: Calculus I](#) (4 credits)

One of the following must be taken:

- [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 215: Object-Oriented Programming with Mathematics](#)

One of the following must be taken:

- [COMP 333: Formal Methods in Software Engineering](#)
- [COMP 373: Objects, Frameworks, and Patterns](#)

All of the following must be taken:

- COMP 163: Discrete Structures
- COMP 271: Data Structures
- COMP 313: Intermediate Object-Oriented Development
- COMP 317: Social, Legal, and Ethical Issues in Computing
- COMP 330: Software Engineering

Practicum Capstone

Six (6) credits taken from one or more of COMP 390: Broadening Participation in STEM (Computing, Math & Science), COMP 391: Internship in Computer Science, and COMP 398: Independent Study. See the details of registering in the links for each course. (See also individual degree requirements, which generally permit three additional units beyond the practicum to be counted as an elective, as long as you take no more than 6 units of 391 and no more than 6 units of 398.) Students are encouraged to complete these credits during junior and senior years to draw on prior experience.

Electives

18 credits taken from:

- COMP 250: Introduction to Scientific and Technical Communication or ENGL 210: Business Writing
- COMP 264: Introduction to Computer Systems
- ISOM 349: Project Management
- Any COMP 300 level electives NOTE: A special case is COMP 390: Broadening Participation in STEM (Computing, Math & Science), COMP 391: Internship in Computer Science and COMP 398: Independent Study : Three additional units beyond the practicum can be counted as an elective, as long as you take no more than 6 units of 391 and no more than 6 units of 398.

Suggested Ordering of Courses

Year 1

- MATH 131: Applied Calculus I or MATH 161: Calculus I
- COMP 163: Discrete Structures
- COMP 170: Introduction to Object-Oriented Programming or COMP 215: Object-Oriented Programming with Mathematics
- COMP 271: Data Structures

Year 2

- COMP 313: Intermediate Object-Oriented Development
- COMP 317: Social, Legal, and Ethical Issues in Computing
- Electives

Year 3

- COMP 330: Software Engineering
- COMP 333: Formal Methods in Software Engineering or COMP 373: Objects, Frameworks, and Patterns
- Electives

Year 4

- Electives
- Practicum

2.8 B.S./M.S. Dual Degree Programs

2.8.1 Overview

The B.S./M.S. programs in Information Technology, Software Engineering, and Computer Science are five-year programs that give academically successful Loyola undergraduates the opportunity to pursue the M.S. degree in Information Technology, Software Engineering, or Computer Science while completing their B.S. degree. The applicant can be pursuing any of the B.S. degrees offered by the Department of Computer Science, including the joint majors with Mathematics or Physics or the interdisciplinary Bioinformatics.

These programs reduce the total number of courses needed and the total time needed for the combined degrees.

Students may not automatically enroll in the BS/MS program during Freshman admission. They must specifically apply to the Graduate School, generally in their Junior year by using [The Graduate Application Form](#). See [Application Requirements](#) and [Application Information](#) for more details.

2.8.2 Curriculum

The stand-alone M.S. programs each require 30 credits of graduate courses. This generally takes one and a half years to complete. B.S./M.S. students must also take 30 credits of courses at the 400 level or greater. The main advantages come from the fact that some of the MS courses may be double counted, applying to the B.S. also, and there can be a shift in some of the required MS courses based on what students took in the B.S. portion. In particular students in the B.S./M.S. program are allowed to “double count” 9 credits (generally three 3-credit courses) of their Loyola COMP courses for both their B.S. and M.S. degrees. Each must be a 400 level course taken in the student’s senior year *in place* of a 300 level major course. In addition, a student wishing to take 123 or more credits while an undergraduate, can have 3 of the extra credits be for a fourth 400 level COMP course, and count that toward the M.S. if the extra course is need for *no* undergraduate requirement, from the university, college, core, major or minor. Hence a B.S./M.S. student with 120 credits and 9 400-level COMP credits counted for the B.S. is required to take only 21 credits (instead of 30 credits) of additional 400-level courses. If a student takes a further 3-credit 400 level COMP course beyond the 120 credits needed for the B.S., then only 18 further credits are needed. In either case students can finish the program in five years. Some further special rules:

1. All students need to take [COMP 271: Data Structures](#) as part of their undergraduate major.
2. Students pursuing an MS in Software Engineering or Computer Science must take [COMP 313: Intermediate Object-Oriented Development](#) by their senior year.
3. Students may take at most 6 credits total of internship at the undergraduate and graduate level, [COMP 391: Internship in Computer Science](#) plus [COMP 499: Internship](#).
4. A student with credit for a 300 level COMP course that was taught in a combined class with a 400 level course may not take the 400 level course later for separate credit without permission from the Graduate Program Director. In particular for students with credit for [COMP 317: Social, Legal, and Ethical Issues in Computing](#), the M.S. requirement for [COMP 417: Social, Legal, and Ethical Issues in Computing](#) is waived, to be replaced by 3 M.S. elective credits. Similarly, in programs requiring [COMP 413: Intermediate Object-Oriented Development](#), [COMP 313: Intermediate Object-Oriented Development](#) will satisfy the requirement, but still the course will need to be replaced by 3 M.S. elective credits.

5. In M.S. programs with restricted electives lists with two or more courses required from a larger explicit list, one of the courses may be waived if the corresponding 300 level undergraduate course was successfully completed at Loyola. The course must still be replaced by a 3-credit M.S. program elective.
6. All further individual M.S. program requirements must be met, but with the inclusion of the allowed 400 level courses taken as an undergraduate.

Application Requirements

The academic prerequisites to be considered for admission to the B.S./M.S. programs in the Computer Science Department are as follows:

- Successful completion of a total of at least 15 credits of major COMP courses, including [COMP 271: Data Structures](#) (even if [COMP 271: Data Structures](#) is only an elective in the major) and including at least 9 credits of 300 level COMP courses. For students pursuing the BS degree in Computer Science and Mathematics, Computer Science and Physics, or Bioinformatics, the 300-level courses may alternately include up to 6 credits of 300 level major courses that are not COMP.
- A GPA of 3.5 or higher in all the major courses.
- A cumulative GPA of 3.3 or higher for all course work at Loyola;
- Satisfactory progress towards completion of Loyola's core.

Further notes on B.S. completion: Before the deadlines do apply to graduate with your B.S in the semester you will actually finish! Otherwise you complicate the conversion to graduate status. If the date when you will start graduate status changes from your original application, notify the GPD ahead of time so data in Locus can be fixed.

Application Information

Current Loyola students who have met the above academic prerequisites are encouraged to apply between January 15 and March 15 of their junior year, though the program is still of practical help to a student who applies before the final undergrad semester in which s/he is taking COMP courses. Students who have an interest in the program are encouraged to consult with the Graduate Program Director for Computer Science, Dr. Andrew Harrington, in the semester prior to their application. Students who have substantial transfer or AP credit, or wish to finish the combined program in less than five years, should discuss the timing of their application with Dr. Harrington. The student should then fill out the on-line Graduate Application Form through the Graduate School web-site. The application will be evaluated upon completion of the following:

- [The Graduate Application Form](#); applicants are to select the B.S./M.S. option. Be careful of the misleading entry named "starting semester": The *starting semester for the program should be the first semester when the student will be in pure graduate status* (after expected completion of the B.S.). This is *not* the semester coming right after the student has filled out the application. This is *after* all double-counted courses are completed.
- A one page personal statement of purpose; this is inserted as part of the Graduate Application Form;
- Three letters of recommendation, at least two coming from faculty in the Department of Computer Science at Loyola University.

Note that the GRE exam is not required for applicants to the B.S./M.S. program, even if they are applying for an assistantship. There is no application fee for applicants who apply on-line. At the time of consideration for admission, the student's most recent Loyola transcript will be examined. If the applicant has transfer credits from another college or university, the student may be required to submit those as well.

Requirements for Completion of the B.S./M.S. Program

After admission to the B.S./M.S. program, a student may request to be registered in their senior year for up to four 400 level COMP courses, with three of them replacing undergraduate major courses, and a fourth if student will graduate with at least 123 credits and not need the fourth course as a part of any undergraduate requirement. Students generally take the remainder of their 30 credits of 400-level classes during their fifth year. This schedule can be modified for students with AP or transfer credit who desire to finish the combined program in less than five years. Students in the program are expected to consult regularly with the Graduate Program Director to insure that they are on track for completion of both the B.S. and M.S. degrees. The following are required to complete a B.S./M.S. degree program:

Successful completion of one of the B.S. degrees in the Department of Computer Science or Bioinformatics or a joint major with Mathematics or Physics. It is expected that the student complete all degree requirements for their chosen B.S. degree at least two semesters before completing the M.S. degree. The 30 credits of 400-level graduate courses, including those taken while an undergraduate, must be completed with a GPA of 3.0 or higher;

Further Information

If you have additional questions about the program, please contact Dr. Andrew Harrington, Graduate Program Director for Computer Science. He can be reached at gpd@cs.luc.edu.

2.9 Minor in Information Technology

2.9.1 Overview

This minor prepares students who plan to design, create, and administer large information bases used by organizations.

Enterprises have an ever-growing investment in the exploding quantity of information, especially in web related data, that requires increasingly sophisticated approaches for efficient access and productive use. Students gain the talents and skills to be successful in today's organizations following current industry practices: planning, designing, implementing and administering data information and knowledge bases that can be effectively mined; assessing the information and data requirements of an organization and implementing these requirements as an information system; and functioning as an effective member of an information services division in an organization.

2.9.2 Curriculum

Eighteen (18) total credits (or 21 if taking ACCT201 and MGMT201):

- COMP 125: Visual Information Processing or COMP 150: Introduction to Computing or COMP 170: Introduction to Object-Oriented Programming or COMP 215: Object-Oriented Programming with Mathematics.
- COMP 251: Introduction to Database Systems or COMP 264: Introduction to Computer Systems or COMP 271: Data Structures.
- COMP 377: IT Project Management or ISOM 349: Project Management.
- One of COMP 300: Data Warehousing and Data Mining, COMP 305: Database Administration, COMP 353: Database Programming, COMP 343: Introduction to Computer Networks, COMP 346: Introduction to Telecommunications, COMP 348: Network Security, COMP 349: Wireless Networks and Security, COMP 351: Network Management, COMP 340: Computer Forensics, COMP 347: Intrusion Detection and Computer Forensics.
- Two more courses from the 200-level and 300-level courses listed above. One of these courses can be replaced by ACCT201 or MGMT201.

2.10 Minor in Computer Science

2.10.1 Overview

Computers are extremely pervasive in the modern world, and important connections have been established between computer science and virtually every other field of study. Thus, a computer science minor is a valuable enhancement to majors in other fields, whether in the sciences, social sciences, arts, humanities, business, etc.

(A more specific interdisciplinary minor is also offered, see [Minor in Computer Crime and Forensics](#), and interdisciplinary majors are offered in [Bioinformatics](#), [B.S. in Mathematics and Computer Science](#), and [B.S. in Physics and Computer Science](#).)

2.10.2 Curriculum

- [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 271: Data Structures](#)
- [COMP 125: Visual Information Processing](#) or [COMP 150: Introduction to Computing](#) or [COMP 163: Discrete Structures](#) or 3 credits of a 300-level course
- [COMP 251: Introduction to Database Systems](#) or [COMP 264: Introduction to Computer Systems](#) or 3 credits of a 300-level course
- Six (6) units of 300-level Computer Science electives (for instance, three 3-credit courses)
 - Note: [COMP 391: Internship in Computer Science](#) is **not** allowed.

Curriculum (pre-Fall 2015)

If you declared the Computer Science Minor prior to Fall 2015, you may use the old curriculum below.

- [COMP 150: Introduction to Computing](#)
- [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 271: Data Structures](#)
- Nine (9) units of Computer Science electives (for instance, three 3-credit courses)
 - Note: 6 units at the 300 level and 3 units at the 200 or 300 level. [COMP 391: Internship in Computer Science](#) is **not** allowed.

2.11 Minor in Computer Crime and Forensics

2.11.1 Overview

Crimes in general are dealt with using preventive and detective techniques. Computer crime is no different. With the dramatic increase in the use of computers, networks, and the Internet, crimes committed via computers and networks have also risen rather sharply. Computer crime prevention falls in the areas known as computer and network security. Computer crime detection is generally known as computer forensics. Computer forensic investigations deal with white collar crime, telecommunications fraud, network intrusion detection, and criminal procedures. A computer forensic expert can help solve cases in money laundering, intellectual property, child pornography, embezzlement, e-mail harassment, murder, and terrorism.

Computer Crime and Forensics is an interdisciplinary minor of the Computer Science and Criminal Justice Departments that will impart knowledge to students in the areas of criminal justice system, courts, law and procedures, computer software, hardware, networks, and investigative and evidence-gathering protocols.

The Computer Crime and Forensics minor does not require any programming background and will appeal to those who want to use computers to solve criminal or civil cases where the evidence is traceable via a computer network or storage. The minor should particularly appeal to computer science, criminal justice and forensic sciences majors. The minor is open for any Loyola student who has an analytical and investigative mind and who enjoys working with computer tools.

2.11.2 Career Opportunities

With the minor, a student can pursue the career path of a computer forensic examiner, or an electronic discovery specialist, or pursue a legal career specializing in criminal and civil law related to computers (IP, internal fraud, misappropriation of trade secrets etc.). A scan of jobs posted in Hotjobs.com and Monster.com reveals that computer forensics specialists are much in demand. Jobs are available across a wide variety of industry segments, pharmaceuticals, accounting firms, financial services, and law firms. Typical titles of jobs advertised in the online jobs websites are: technology litigation support specialist, incident management engineers, computer forensics manager, law enforcement officers, information security specialist, electronic discovery specialist etc.

2.11.3 Curriculum

All of the following must be taken:

- CJC 101: The Criminal Justice System
- COMP 150: Introduction to Computing or COMP 170: Introduction to Object-Oriented Programming or COMP 215: Object-Oriented Programming with Mathematics / MATH 215: Object Oriented Math Programming
- COMP 340: Computer Forensics
- COMP 347: Intrusion Detection and Computer Forensics

One course from the following:

- CJC 322: Criminal Courts and Law
- CJC 323: Criminal Procedure

One course from the following:

- COMP 264: Introduction to Computer Systems (requires COMP 170: Introduction to Object-Oriented Programming prerequisite)
- COMP 317: Social, Legal, and Ethical Issues in Computing
- COMP 343: Introduction to Computer Networks (requires COMP 170: Introduction to Object-Oriented Programming and COMP 271: Data Structures sequence as prerequisites)

UNDERGRADUATE COURSES

3.1 COMP 102: Web Design and Multimedia Publishing

This course introduces foundations of the world wide web technology, HTML, and multimedia publishing techniques. Topics include HTML syntax, CSS, XML, RSS, and various multimedia formats.

3.1.1 Credit Hours

3

3.1.2 Prerequisites

None

3.1.3 Description

An introduction to the basic components and tools used in developing pages for the World Wide Web. Topics will include HTML, HTML Standards and validation, Cascading Style Sheets (CSS), and scripting. Tools appropriate for each of these will be discussed. Other topics may include CGI programming and graphics editors. The course is taught in a laboratory environment with hands-on instruction.

3.1.4 Outcome

An understanding of the technologies behind web sites and the ability to use them effectively.

3.1.5 Syllabi

No recent syllabi available.

3.2 COMP 104: Computer Animation

The course introduces techniques for understanding and developing dynamic and interactive media by using sound, motion, images, and text. Relevant software knowledge areas are covered.

3.2.1 Credit hours

3

3.2.2 Prerequisites

None

3.2.3 Description

Computer animation of multimedia objects is increasingly used in web publishing and in projects for product marketing. The purpose of this course is to introduce interactive elements in multimedia creation using computer animation and using simple programming components for interactivity. The course will teach techniques to create dynamic and interactive content using Macromedia's Flash software. Examples of interactivity include the ability to change the animation upon user input, as in a flying plane unveiling a banner when the user touches it or upon the expiration of a timer, as in rain turning to snow in 5 seconds or other event-driven systems. The course is appropriate for anyone who is interested in using computers to design, and publish simple graphical animations including web developers, and graphic artists. The salient feature of the course is that very little programming knowledge is needed although students should be comfortable in using software tools and be able to think logically to write simple, programming segments in a special language called Actionscript.

3.2.4 Outcome

Ability to publish created animated media projects to the web in a process that involves understanding human interface design.

3.2.5 Syllabi

No recent syllabi available.

3.3 COMP 111: History of Computing

The social and organizational history of humanity is intricately entangled with the history of technology in general and the technology of information in particular. Advances in this area have often been closely involved in social and political transformations. While the contemporary period is often referred to by such names as the Computing and Information Age, this is the culmination of a series of historical transformations that have been centuries in the making. This course will provide a venue for students to learn about history through the evolution of number systems and arithmetic, calculating and computing machines, and advanced communication technology via the internet.

3.3.1 Credit Hours

3

3.3.2 Prerequisites

None

3.3.3 Description

This course will provide a venue for students to learn about history through the evolution of number systems and arithmetic, calculating and computing machines, and advanced communication technology via the Internet. Students who take this course will attain a degree of technological literacy while studying core historical concepts. Students who complete this course will learn the key vocabulary of the computing discipline, which is playing a significant role in modern human thought and new media communications. The History of Computing will be organized around the historical perspective. The relationships between social organization, intellectual climate, and technology will be examined and stressed.

3.3.4 Syllabi

No recent syllabi available.

3.4 COMP 120: Introduction to Computer Applications

This course, intended for non-science majors, offers a hands-on introduction to the development, functions, and applications of computers. It includes weekly lab assignments.

3.4.1 Alias

Math 149

3.4.2 Credit Hours

3

3.4.3 Prerequisites

MATH 100: Intermediate Algebra or equivalent

3.4.4 Description

This course, intended for non-science majors, offers a hands-on introduction to the development, functions, and applications of computers. Topics include e-mail, exploring the Internet, spreadsheets, word processing, database, desktop software, statistical packages, and programming. Uses of computing technology in business and the arts. We also review ethical, security, and privacy issues as they relate to computers and the world today. There are also weekly lab assignments in this course.

3.4.5 Outcome

Experience with Internet tools, desktop publishing, spreadsheets, databases, statistical packages, and some programming, and with applications to business and the arts; an understanding of ethical, security, and privacy issues relating to computers and the Internet.

3.4.6 Syllabi

No recent syllabi available.

3.5 COMP 122: Introduction to Digital Music

Computers and digital tools have been seeping into the world of music, and this course aims to explore this newly formed territory.

3.5.1 Credit Hours

3

3.5.2 Prerequisites

Required – MATH 118: Precalculus (or equivalent)

Preferred – COMP 150: [Introduction to Computing](#)

3.5.3 Description

This course will be cross-listed with Music.

Computers and digital tools have been seeping into the world of music, and this course aims to explore this newly formed territory. This course is intended for both Music and Computer Science students who wish to learn more about electronic music, signal processing, and algorithmic music composition.

3.5.4 Outcome

- understanding of the physics of musical sound and digital audio
- hands-on applications of algorithmic music composition and musicology
- ability to design and render digital instruments
- student-chosen final digital composition or musicology project

3.5.5 Syllabi

No recent syllabi available.

3.6 COMP 125: Visual Information Processing

This course, intended primarily for non-majors, provides an introduction to computer programming using a language well-suited to beginning programmers and practical applications, e.g., Visual Basic.Net.

3.6.1 Credit Hours

3

3.6.2 Prerequisites

None

3.6.3 Description

An elementary introduction to programming using a language such as Visual Basic. Topics include variables, formatted input/output, arrays, looping, conditional execution, subroutines, functions, computer graphics, animation. Applications to other disciplines are stressed.

3.6.4 Outcome

Understanding of computer mechanisms for representing and analyzing numerical and logical information and the power of programmability; practical ability to implement useful computing tools.

3.6.5 Syllabi

Fall 2011	Dr. Ron Greenberg	http://rig.cs.luc.edu/~rig/courses/syllabi/c125f11.pdf

3.7 COMP 150: Introduction to Computing

The world overflows with electronic data. This course introduces programming in a simple, powerful language like Python, with selection, repetition, functions, graphical effects, and dynamic interaction with the Internet, plus connections to lower level computer organization and computer implications in the wider world.

3.7.1 Credit Hours

3

3.7.2 Prerequisites

None

3.7.3 Description

This course provides a broad survey introducing the many layers of the computer science discipline, emphasizing the computer's role and limitations as a tool for describing, organizing, and manipulating information applicable to many disciplines. Topics include binary logic expressed in electronic circuitry, machine architecture, basic programming in the very accessible language Python, data organization, the potential and limitations of machines, and useful tools.

This course serves as a terminal course for students who want a one-course introduction to the field, as well as a preliminary course to upper-level computer science offerings.

3.7.4 Outcome

Empowerment to manage and transform masses of data; understanding of technical, societal, and ethical issues involved.

3.7.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Curtis Tuckey	http://logicphilosophicus.org/loyola/cs-150/

Fall 2011	Dr. Mark Albert	http://mva.me/edu/comp150/

3.8 COMP 163: Discrete Structures

This course covers the mathematical foundations of computer science, including such topics as complexity of algorithms, modular arithmetic, induction and proof techniques, graph theory, combinatorics, Boolean algebra, logic circuits, and automata.

3.8.1 Credit Hours

3

3.8.2 Prerequisites

None

3.8.3 Description

Mathematical foundations of computer science. Topics include: complexity of algorithms; modular arithmetic; induction and proof techniques; graph theory; combinatorics; Boolean algebra and switching systems (including Karnaugh maps and the Quine-McCluskey method); symbolic logic and logic circuits; and an introduction to automata and formal languages.

3.8.4 Outcome

The student will be prepared for the study of advanced ideas in computer science, from cryptography to databases to algorithms to computer architecture.

3.8.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Dr. Greenberg	http://rig.cs.luc.edu/~rig/courses/syllabi/c163f13.pdf

3.9 COMP 170: Introduction to Object-Oriented Programming

This programming intensive course with its weekly lab component introduces basic concepts of object-oriented programming in a language such as Java.

3.9.1 Credit Hours

3

3.9.2 Prerequisites

Students are required to have taken [MATH 117: College Algebra](#) as a prerequisite or to have been placed in [MATH 118: Precalculus](#) or higher.

Alternatively, students can take any **one** of the following courses as a prerequisite or as a co-requisite:

- [COMP 163: Discrete Structures](#)
- [COMP 150: Introduction to Computing](#)
- [MATH 118: Precalculus](#)
- [MATH 131: Applied Calculus I](#)
- [MATH 161: Calculus I](#)

3.9.3 Description

This course is an introduction to the computer science major, covering basic concepts using the C# (C-Sharp) object-oriented(OO) programming language.

The course addresses the following questions:

- What is an algorithm?
- How does one write, debug, run (“execute”), and test an effective computer program?
- How does one convert an algorithm into a computer program?
- How does one judge a program?
- What does “object-oriented” mean?

Topics include: variables, data types,input/output, loops and repetition, choice, arrays, subprograms,classes/objects, OO principles, and recursion.

3.9.4 Course Goals

Upon successful completion of the course, the student will be able to:

1. Write good programs of small to medium size – programs that are correct, high quality, and use correct and appropriate Object Oriented Programming techniques.
2. Reuse classes and Application Programming Interfaces (APIs) developed by others, especially the standard library APIs.
3. Understand and recognize proper programming style and demonstrate making design decisions consistent with Object Oriented methodologies.
4. Be able to read, understand, and interpret programs written by others in the same language.

3.9.5 Outcome

Ability to take a problem, break it into parts, specify algorithms, and express a solution in terms of variables, data types, input/output, repetition, choice, arrays, subprograms, classes, and objects; ability to judge a good program.

3.9.6 Syllabi

Spring 2013	Dr. Harrington	http://anh.cs.luc.edu/170/index.html

3.10 COMP 171: Scripting Languages

Scripting languages are rapid prototyping languages that are used extensively. This course covers the principles, syntax and semantics of widely used scripting languages.

3.10.1 Credit Hours

1

3.10.2 Prerequisites

None

3.10.3 Description

This is a course suitable for anyone wishing to study programming computers without pain. After taking this course, students should (a) have an understanding of what scripting languages can do and when they are suitable for use, (b) be able to program in Perl (c) be able to program in Python, and (d) have an understanding of their applicability to scientific and business domains.

3.10.4 Outcome

Students will learn how a program can be put together quickly and efficiently to solve problems.

3.10.5 Syllabi

Semester/Year	Instructor	URL
Spring 2012	Dr. Honig	http://people.cs.luc.edu/whonig/comp-171-scripting-practicum/Comp171Syllabus16Jan12.pdf

3.11 COMP 215: Object-Oriented Programming with Mathematics

This is an introductory programming course for students interested in mathematics and scientific computing. Students will program primarily in a general object-oriented language such as Python, with supplementary exercises in a computer algebra system. Examples will be drawn primarily from applications of calculus, elementary number theory, and cryptography.

3.11.1 Credit Hours

3

3.11.2 Prerequisites

MATH 132: Applied Calculus II or MATH 162: Calculus II or permission of Instructor

3.11.3 Description

This is an introductory programming course for students interested in mathematics and scientific computing. Students will program primarily in a general object-oriented language such as Python, with supplementary exercises in a computer algebra system. Examples will be drawn primarily from applications of calculus, elementary number theory, and cryptography.

3.11.4 Outcome

Students will learn basic scripting and object-oriented programming, with the goal of being able to solve mathematical and scientific problems.

3.11.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Christine Haught	https://drive.google.com/file/d/0B5gCIDnivRb5d3dSWkdQUExMVjQ/edit?usp=sharing

3.12 COMP 250: Introduction to Scientific and Technical Communication

This course trains students in writing clear, readable, and well-organized technical communications, including presentations, end-user documentation, internal project documentation, and scientific papers.

3.12.1 Credit Hours

3

3.12.2 Prerequisites

COMP 170: Introduction to Object-Oriented Programming (coreq or prereq) or COMP 150: Introduction to Computing

3.12.3 Description

This required foundation course for the new BS majors the Department of Computer Science is intended to provide students with the knowledge and skills in writing, presentations, and other forms of technical communication expected of them in their future roles as science and technology professionals. The course covers the following topics: principles of organizing, developing, and writing technical information; forms and conventions common to scientific and technical disciplines; presentation of technical information to various audiences; principles and techniques of oral presentations; computer-aided visual presentation techniques. This course is officially approved for “writing-intensive” credit.

3.12.4 Outcome

Students will learn to write clear technical documentation.

3.12.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Roxanne Schwab	https://drive.google.com/file/d/0B5gCIDnivRb5TGZ1R3hZbVdwRmM/edit?usp=sharing
Spring 2012	Dr. Greenberg	http://rig.cs.luc.edu/~rig/courses/syllabi/c250s12.pdf

3.13 COMP 251: Introduction to Database Systems

This course explores ways in which data collections are organized, stored, analyzed, and manipulated. Topics include relational databases, the SQL query language, and the basics of XML and web interfaces to data sets. Applications from a variety of domains illustrate the course’s key concepts.

3.13.1 Credit Hours

3

3.13.2 Prerequisites

COMP 125: Visual Information Processing or COMP 150: Introduction to Computing or COMP 170: Introduction to Object-Oriented Programming or COMP 215: Object-Oriented Programming with Mathematics

3.13.3 Description

This course explores ways in which data collections are organized, stored, analyzed, and manipulated. Topics include relational databases, the SQL query language, and the basics of XML and web interfaces to data sets. Applications from a variety of domains illustrate the course's key concepts.

3.13.4 Outcome

Students will organize data in ways to emphasize relationships, write simple programs to process, visualize and graphically display data, mine data for patterns, and design web interfaces to data.

3.13.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Guy Bevente	https://drive.google.com/file/d/0B5gCIdnivRb5THdGSmFzSFgzQzA/edit?usp=sharing

3.14 COMP 264: Introduction to Computer Systems

This course studies the hierarchy of abstractions and implementations that constitute a modern computer system, with a particular focus on issues of interest to programmers, typically including some systems programming instruction.

3.14.1 Credit Hours

3

3.14.2 Prerequisites

COMP 170: Introduction to Object-Oriented Programming or COMP 215: Object-Oriented Programming with Mathematics or COMP 163: Discrete Structures or MATH 201: Elementary Number Theory (corequisite or prerequisite)

3.14.3 Description

This course is designed to provide students with an understanding of the hierarchy of abstractions and implementations that comprise a modern computer system. The course is particularly geared towards topics of interest to a programmer, i.e., topics that affect the performance, correctness, or utility of user-level programs. Since this investigation is best carried out using the C programming language, the course will include some instruction in C for programming familiar with Java.

3.14.4 Outcome

Understanding of system issues that affect the performance, correctness, or utility of user-level programs.

3.14.5 Syllabi

Semester/Year	Instructor	URL
Spring 2013	Dr. Greenberg	http://rig.cs.luc.edu/~rig/courses/syllabi/c264s13.pdf

3.15 COMP 266: Digital Electronics Laboratory

Also Offered As [PHYS 266: Digital Electronics Laboratory](#)

3.15.1 Credit Hours

3

3.15.2 Prerequisites

[PHYS 112: College Physics II](#) or permission.

3.15.3 Description

This course has lectures as well as labs. The topics that will be studied are; logic devices, oscillators and timers, microprocessor components, machine language and digital/analog conversion. Special emphasis would be put upon individual components of microprocessor systems.

3.15.4 Syllabi

No recent syllabi available.

3.16 COMP 271: Data Structures

This course introduces key data structures such as lists, sets, and maps, as well as their implementations. Performance and analysis of algorithms are covered along with applications in sorting and searching.

3.16.1 Credit Hours

3

3.16.2 Prerequisites

COMP 170: Introduction to Object-Oriented Programming or COMP 215: Object-Oriented Programming with Mathematics

COMP 163: Discrete Structures or MATH 201: Elementary Number Theory (corequisite)

3.16.3 Description

This continuation of [COMP 170: Introduction to Object-Oriented Programming](#) introduces the concepts of data abstraction and data structure, including stacks, queues, lists, sets, and trees. The issues of implementing a data structure in a language such as Java are examined using classes, arrays, and linked structures. Sorting and searching techniques are analyzed. The concepts of correctness and efficiency of algorithms are developed. Time/space comparisons of iterative algorithms with recursive algorithms are made. The course includes several major programming projects. A weekly lab component is required.

3.16.4 Outcome

Students will learn to design new data structures as well as learn to use existing data structures in applications.

3.16.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Maria Saenz	https://drive.google.com/file/d/0B5gCIDnivRb5UXpVNFkyODU4ZGM/edit?usp=sharing

3.17 COMP 300: Data Warehousing and Data Mining

This course covers theory and practice of extremely large information storage (warehousing) and analysis (mining) mechanisms. With data growing at exponential rates knowledge gathering and exploration techniques are essential for gaining useful intelligence.

3.17.1 Credit Hours

3

3.17.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

3.17.3 Description

Data warehousing and data mining are two major areas of exploration for knowledge discovery in databases. These topics have gained great relevance especially in the 1990's and early 2000's with web data growing at an exponential rate. As more data is collected by businesses and scientific institutions alike, knowledge exploration techniques are

needed to gain useful business intelligence. This course will cover a wide spectrum of industry standard techniques using widely available database and tools packages for knowledge discovery.

Data mining is for relatively unstructured data for which more sophisticated techniques are needed. The course aims to cover powerful data mining techniques including clustering, association rules, and classification. It then teaches high volume data processing mechanisms by building warehouse schemas such as snowflake, and star. OLAP query retrieval techniques are also introduced.

3.17.4 Outcome

Students will be able to define and critically analyze data warehouse and mining approaches for fields such as security, forensics, privacy, and marketing.

3.17.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Channah Naiman	http://webpages.cs.luc.edu/%7Ecnaiman/COMP300/SP14/COMP300syllSP14.html

3.18 COMP 305: Database Administration

Business and scientific institutions increasingly use large commercial data base systems. This course teaches the theory and practice for the definition, security, backup, tuning, and recovery of these systems.

3.18.1 Credit Hours

3

3.18.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

3.18.3 Description

Businesses and scientific institutions have started using commercial grade database servers increasingly. Hence it has become important to install, configure, and manage the servers in an efficient manner to increase productivity. A number of tasks involved in maintaining a database server is quite different from say administering a computer system or a network. Deeper knowledge of the storage aspects of the server and how different server processes work are needed for successful administration of the server. Typically, the database administrator cares for security of data, backup and recovery, and space management. This course takes a user through the stages of setting up a database server environment, to design of a database, and finally tuning.

3.18.4 Outcome

Students will be able to use theory and pragmatic approaches to define and implement realistic solutions for large database administration environments.

3.18.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Dr. Dordal	http://webpages.cs.luc.edu/~pld/courses/305/spr14/

3.19 COMP 309: Numerical Methods

3.19.1 Aliases

MATH 309: Numerical Methods

3.19.2 Credit Hours

3

3.19.3 Prerequisites

MATH 215: Object Oriented Math Programming or COMP 215: Object-Oriented Programming with Mathematics or COMP 170: Introduction to Object-Oriented Programming

MATH 212: Linear Algebra

MATH 264: Ordinary Differential Equations

3.19.4 Course Description

Introduction to error analysis, numerical solution of equations, interpolation and approximation, numerical differentiation and integration, matrices and solution of systems of equations, numerical solution of ordinary and partial differential equations.

3.19.5 Syllabi

No recent syllabi available.

3.20 COMP 312: Free/Open Source Computing

This course will cover the fundamentals of Free and Open Source software development. Topics to be addressed include licensing, Linux, typical software development tools, applications, and techniques for managing remote servers.

3.20.1 Credit Hours

3

3.20.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

3.20.3 Description

This course will cover the fundamentals of Free and Open Source software development. Topics to be addressed include licensing, Linux, typical software development tools (e.g. compilers, scripting languages, build tools, and version control software), applications, and techniques for managing remote servers. Students will work on a significant development project involving free and open-source software and learn how to participate in open-source projects effectively.

3.20.4 Outcome

Students will learn to implement projects involving Free and Open Source software and learn how to participate in open-source projects effectively.

3.20.5 Syllabi

Semester/Year	Instructor	URL
Summer 2014	George K. Thiruvathukal	http://foss.etl.luc.edu
Spring 2014	Matt Butcher	https://drive.google.com/file/d/0B5gCiDnivRb5Ni15MlpialZJNzg/edit?usp=sharing

3.21 COMP 313: Intermediate Object-Oriented Development

Object-orientation continues to be a dominant approach to software development. This intermediate programming-intensive course studies the use of classes and objects with an emphasis on collaboration among objects.

3.21.1 Credit Hours

3

3.21.2 Prerequisites

COMP 271: Data Structures (strictly enforced)

3.21.3 Description

Object-orientation continues to be a dominant approach to software development. This intermediate programming-intensive course studies the use of classes and objects with an emphasis on collaboration among objects.

Overall Series of Object-Oriented Courses

- [COMP 170: Introduction to Object-Oriented Programming \(CS1\)](#) - simple objects representing scalars
- [COMP 271: Data Structures \(CS2\)](#) - collections of simple objects
- [COMP 313: Intermediate Object-Oriented Development](#) / [COMP 413: Intermediate Object-Oriented Development](#) - complex, interacting objects; basic design patterns
- [COMP 373: Objects, Frameworks, and Patterns](#) / [COMP 473: Object-Oriented Programming](#) - advanced design patterns and topics such as AOP(Aspect-Oriented programming)

COMP 313: Intermediate Object-Oriented Development / COMP 413: Intermediate Object-Oriented Development is also a prerequisite for other advanced software courses. Students interested in advanced software courses are encouraged to take COMP 313: Intermediate Object-Oriented Development / COMP 413: Intermediate Object-Oriented Development as soon as they have completed COMP 271: Data Structures so as to be eligible for these further courses.

Course Topics

- Data Structures of various types – linear vs. nonlinear, indexing vs. non-indexing, position vs. value-oriented
- Advanced Java, e.g. interfaces, annotations, exceptions, generics, collections, boxing/unboxing, array objects
- Object Modeling – UML, use cases and activity diagrams, class diagrams, archetypes, interaction diagrams
- Design by contract, interfaces, refactoring & generalization, design patterns (Adapter, Decorator, Composite, Strategy, Iterator, Abstract Factory, Visitor, ...)
- Agile Development Process – evolutionary design, test-driven development, refactoring, ...
- Tools – Eclipse, Subversion, JUnit, JMock, Ant, ...
- Techniques – object pooling, garbage collection, performance profiling (NetBeans)

3.21.4 Outcome

A thorough understanding of the principles of object-orientation: abstraction, delegation, inheritance, and polymorphism; exposure to basic design patterns; programming experience in mainstream object-oriented languages such as C++ and Java.

You will take your software development abilities to the next level by building on your knowledge of data structures.

You will learn to design and implement more complex programs using good software engineering practices, including:

- Designing with interfaces and composition
- Design patterns
- Refactoring
- Test-driven development (TDD)

3.22 COMP 314/315: Problem Solving Strategies

This course allows students to sharpen problem-solving skills along with, or as part of, the ACM Programming Team. Groups generally work on old competition problems on alternate weekends, with short follow-ups during the next week.

3.22.1 Credit Hours

For 314: 1; For 315: 2

3.22.2 Prerequisites

For COMP 314:

COMP 271: Data Structures (or corequisite)

For COMP 315:

COMP 314: Problem Solving Strategies

3.22.3 Description

This course started as a means to give ACM programming team members academic credit for their participation. The class work will be designed to help these people. We will mostly work old programming team competition problems, alone and in groups, and discuss strategies for solving such problems effectively. You do not need to be interested in the official team to find these problems and the discussions about them interesting. You do NOT need to agree to be on the team to be in the class. You are welcomed to be in the class if you just want to sharpen your problem solving and triaging skills. The competition problems are reasonable ones to work on with or without the competition. They are quite unlike typical course homework exercises: They come from all different areas, all different levels of difficulty, and the words describing them do not directly say any algorithm needed. A significant part of each problem is to classify it. Advanced students will certainly find challenging problems to work on. Students in Comp 271 should find enough to keep them productively occupied, and get a taste of more advanced techniques from class discussions.

If you *do* want to compete officially, see also <http://anh.cs.luc.edu/314-315/prog-team.html>.

By enrolling in the sequence 314-315 over two years, you satisfy 3 units of elective credit in Computer Science department majors.

In keeping with the programming competition format, we will arrange a schedule to meet about every two weekends for a 5 hour practice/problem solving session, with a weekday followup discussion for 1-1.5 hours on a weekday in the following week.

The organizational meeting to agree on practice and discussion times will be in the afternoon in the first week of classes. The time will be posted.

Contact Dr. Harrington if you cannot attend that session. Try to let him know ahead of time your available weekend times through October.

3.22.4 Outcome

Ability to work in small groups, quickly and accurately assessing and solving focused problems involving many sorts of programming knowledge.

3.22.5 Syllabi

Semester/Year	Instructor	URL
Fall 2015	Dr. Harrington	http://anh.cs.luc.edu/314-315/

3.23 COMP 317: Social, Legal, and Ethical Issues in Computing

This course covers social, legal, and ethical issues commonly arising in key areas related to computing technologies.

3.23.1 Credit Hours

3

3.23.2 Prerequisites

None

3.23.3 Description

This course will explore a variety of ethical and legal issues facing those who use or program computers. Issues can be divided broadly into professional ethics, dealing with the ethical responsibilities of the programmer, and social issues, dealing with concerns we all have as citizens.

3.23.4 Outcome

Understanding of laws and issues in areas such as privacy, encryption, freedom of speech, copyrights and patents, computer crime, and computer/software reliability and safety; understanding of philosophical perspectives such as utilitarianism versus deontological ethics and basics of the U.S. legal system.

3.23.5 Recent Syllabi

3.24 COMP 319: Introduction to Unix

An introduction to the UNIX operating system. Topics include files and directories, electronic mail, security, advanced file systems, network utilities, network file sharing, text utilities, shell programming, UNIX internals, UNIX system administration (essentials), the X windowing system, systems programming, and secure shell (SSH).

3.24.1 Credit Hours

1

3.24.2 Prerequisites

COMP 170: Introduction to Object-Oriented Programming

3.24.3 Description

An introduction to the UNIX operating system. Topics include files and directories, electronic mail, security, advanced file systems, network utilities, network file sharing, text utilities, shell programming, UNIX internals, UNIX system administration, the X windowing system, and systems programming. Programming assignments involve the UNIX shell script language.

3.24.4 Outcome

After taking this course, students will develop working knowledge of Unix and be able to use modern Unix operating systems such as Linux, OS X, or Solaris.

3.24.5 Syllabi

No recent syllabi available.

3.25 COMP 320: Software Systems Analysis

Software systems analysis and design document user needs, create system architecture, and guide implementation. This course teaches the Unified Modeling Language (UML), and uses current software tools for analysis and design.

3.25.1 Credit Hours

3

3.25.2 Prerequisites

COMP 163: Discrete Structures and COMP 271: Data Structures

3.25.3 Description

This course uses Unified Modeling Language notation to model the early software analysis and design phase. Object technology is critical to the understanding of the process of capturing business requirements and the course uses commercial software tools to perform systems analysis and design.

3.25.4 Outcome

Students will be able to use techniques of analysis and design, document results using UML, and understand how to communicate in team oriented settings.

3.25.5 Syllabi

Spring 2012	Dr. Honig	https://drive.google.com/file/d/0Bz_4VraMwHUoTHZONE84V2ROU2s/edit?usp=sharing

3.26 COMP 322: Software Development for Wireless/Mobile Devices

3.26.1 Credit Hours

3

3.26.2 Prerequisites

COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

3.26.3 Description

This course will focus on the unique challenges, methods, tools, and technologies for developing software applications for wireless and mobile devices, such as personal digital assistants (PDA) and smart mobile phones. Topics include user interface design for smallscreen, multi-channel devices, programming techniques and memory management for devices with limited memory and processing power, data synchronization for mobile databases, and wireless network programming.

3.26.4 Syllabi

Semester/Year	Instructor	URL
Spring 2009	Dr. Honig	https://drive.google.com/file/d/0Bz_4VraMwHUoSGdaOU9JS0VUTms/edit?usp=sharing

3.27 COMP 324: Client-Side Web Development

3.27.1 Credit Hours

3

3.27.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming

- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

3.27.3 Description

This course provides an in-depth study of the concepts and methods required for the design and implementation of the presentation layer of a web application. Topics include visual design, usability design, multi-channel and multi-modal applications, markup of static and dynamic content, content transformation, client-side executable content including client-side scripting and embedded applets, and web-based content management systems. Coursework includes several substantial programming projects (using technologies such as XHTML, XSTL, DHTML, JavaScript, PHP/ASP/JSP, Flash, and Zope/Plone).

3.27.4 Syllabi

Topic	Semester/Year	Instructor	URL
Client Side Web Design	Fall 2014	Dr. Albert	http://comp424.pacsites.org

3.28 COMP 328: Algebraic Coding Theory

3.28.1 Aliases

MATH 328: Algebraic Coding Theory

3.28.2 Credit Hours

3

3.28.3 Prerequisites

MATH 212: Linear Algebra

3.28.4 Description

Codes with algebraic structure for error control are examined. Block codes including Hamming codes and Reed-Muller codes, BCH codes, and other cyclic codes with algebraic structure and their implementation are treated. Other topics may include: convolutional codes, efficiency considerations, and Shannon's fundamental theorem of information theory.

3.28.5 Outcome

Students will learn both the theory and application of error-correcting codes.

3.28.6 Syllabi

No recent syllabi available.

3.29 COMP 330: Software Engineering

Students learn real-world theory and techniques organizations use to create high-quality software on time. Students work on a large programming team to create plans, review progress, measure quality, and make written and oral analyses of their project.

3.29.1 Credit Hours

3

3.29.2 Prerequisites

COMP 271: Data Structures

3.29.3 Description

Using an object-oriented language such as C++ or Java, the student (working in a small team) will learn to plan, design, implement, and test a large software project.

3.29.4 Outcome

Students will experience process based development, understand the dynamics of a professional software organization, and develop skills for implementing software with others.

3.29.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Dr. Honig	https://drive.google.com/file/d/0B5gCIDnivRb5MXEwQXIwTThkYXc/edit?usp=sharing

3.30 COMP 331: Cryptography

This course introduces the formal foundations of cryptography and also investigates some well-known standards and protocols, including private and public key cryptosystems, hashing, digital signatures, RSA, DSS, PGP, and related topics.

3.30.1 Aliases

MATH 331: Cryptography

3.30.2 Prerequisites

Mathematical Preparation

COMP 163: Discrete Structures, MATH 313: Abstract Algebra, or MATH 201: Elementary Number Theory)

Programming Foundations

COMP 125: Visual Information Processing, COMP 170: Introduction to Object-Oriented Programming, or COMP 215: Object-Oriented Programming with Mathematics (or equivalent)

3.30.3 Description

This course introduces the formal foundations of cryptography and also investigates some well-known standards and protocols. The intended audience is senior undergraduate and beginning graduate students. The course will include topics selected from the following: information-theoretic security, private key encryption, DES, public key encryption, background on modular arithmetic, RSA, hashing and message authentication codes (MACs), digital signatures, DSS, key distribution and management, PGP, network security, and Fiat-Shamir protocol.

3.30.4 Outcome

Students will gain an understanding of cryptosystems widely used to protect data security on the internet, and be able to apply the ideas in new situations as needed.

3.30.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Stephen Doty	https://drive.google.com/file/d/0B5gClDnivRb5RVZfVDM4d3RadTg/edit?usp=sharing

3.31 COMP 333: Formal Methods in Software Engineering

As embedded and networked systems are becoming ever more ubiquitous, we depend increasingly on the correctness of the software that controls such systems. This course studies the formal specification, verification, and synthesis of software.

3.31.1 Credit Hours

3

3.31.2 Prerequisites

COMP 271: Data Structures

3.31.3 Description

This course covers formal methods used in the development of software. It studies languages for object-oriented modeling, such as the Unified Modeling Language (UML) along with its Object Constraint Language (OCL) and Action Semantics extensions; the specification of abstract data types, such as Z; and concurrency, such as process algebras and temporal logic.

3.31.4 Outcome

An understanding of the role of formal methods in the construction of software systems; proficiency in representative methods and tools, such as UML and ESC.

3.31.5 Syllabi

No recent syllabi available.

3.32 COMP 336: Markup Languages

This course is concerned with XML and its various component frameworks. The core frameworks to be covered include Document Object Model (DOM), Simple API for XML processing (SAX), the XML Path language (XPath), and XSLT.

3.32.1 Credit Hours

3

3.32.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

3.32.3 Description

This course covers Extensible Markup Language (XML) and its applications. This course will cover the core XML component frameworks, including XSLT (a transformational approach) and the various W3C specifications for manipulating XML documents programmatically, including the DOM and SAX frameworks. As well, this course will cover some advanced topics, including how to manage large XML documents and integration with databases. Please note that HTML will be occasionally used in this course; however, this course is not about HTML and students may want to acquire an HTML book and study it briefly before taking this course. This course is not about making cool web pages. The course has almost nothing to do with web pages and is focused more on modeling and the emergent notion of web services.

Students should expect the programming to be somewhat involved (intermediate to advanced). Most of the programming is based on straightforward data structures, such as trees, lists, and maps (collections found in Java). You are encouraged to study these topics on your own. Little time will be spent rehashing this preliminary knowledge.

3.32.4 Outcome

After taking this course, students will have working knowledge of XML and its connections to other ideas such as HTML, object models, relational databases, and network services.

3.32.5 Syllabus

Offering	Instructor	URL
Fall 2013	Matt Bone	http://markup.cs.courseclouds.com/fall2013/syllabus.html
Spring 2012	Dr. Thiruvathukal	http://markuplanguages.cs.courseclouds.com

3.33 COMP 337: Introduction to Concurrency

Many real-world software systems rely on concurrency for performance and modularity. This programming-intensive course covers analysis, design, implementation, and testing of concurrent software systems.

3.33.1 Credit Hours

3

3.33.2 Prerequisites

COMP 313: Intermediate Object-Oriented Development

3.33.3 Description

This course studies the architecture, design, and implementation of concurrent software systems. Process algebras, formal specification, and testing are used as tools in the engineering of concurrent systems; event-based programming frameworks and thread libraries are employed in the implementation of such systems. Coursework includes several substantial programming projects (in a language such as Java) involving applications of concurrency and event-driven programming such as graphical user interfaces and distributed services using Remote Method Invocation (RMI).

3.33.4 Outcome

An in-depth understanding of event-based and thread-based views of concurrency; the ability to develop concurrent software components using suitable languages, frameworks, and design patterns; familiarity with object-oriented modeling and development tools and test driven development.

3.33.5 Syllabi

No recent syllabi available.

3.34 COMP 338: Server-Based Software Development

Server-based web applications and services have become part of everyday life. This programming-intensive course covers analysis, design, implementation, and testing of multi-tiered server-based software systems along with typical tier-specific technologies.

3.34.1 Credit Hours

3

3.34.2 Prerequisites

COMP 313: Intermediate Object-Oriented Development

COMP 264: Introduction to Computer Systems (strongly recommended)

3.34.3 Description

This course studies the architecture, design, and implementation of multi-tiered server-based software systems. Each tier is studied along with the pertinent mechanisms: markup languages in the client tier, web application frameworks in the web tier, and server-side components in the business logic and persistence tiers. Pervasive issues such as integration, testing, security, and performance are discussed. Coursework includes several substantial programming projects (using a platform such as Java 2 Enterprise Edition).

3.34.4 Outcome

An understanding of software architecture and integration in the development of multi-tiered server-based software; familiarity with object-oriented modeling and development tools and test-driven development.

3.34.5 Syllabi

Semester/Year	Instructor	URL
Spring 2012	Dr. Läufer	http://laufer.cs.luc.edu/teaching/442

3.35 COMP 339: Distributed Systems

This course covers topics in modern distributed systems. This course places special emphasis on scalability (performance), reliability/fault tolerance, and security.

3.35.1 Credit Hours

3

3.35.2 Prerequisites

COMP 313: Intermediate Object-Oriented Development or COMP 374: Introduction to Operating Systems

3.35.3 Description

This course is designed as a modern discussion of distributed computing systems, which represent one of the most important areas in academic and business computing today. Topics covered include distributed computing, interactive services, collaborative computing, and peer-to-peer sharing.

Various distributed frameworks and technologies will be explored, e.g. DNS, CORBA, Java RMI, SOAP (XML-based RPCs), and Globus.

3.35.4 Outcome

After taking this course, students should understand the essential ingredients of distributed systems and how to build distributed systems that are resilient to transient network failures and other potential anomalies.

3.35.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Dr. Thiruvathukal	http://distributed.cs.courseclouds.com/html/syllabus.html

3.36 COMP 340: Computer Forensics

The course introduces the fundamentals of computer/network/internet forensics, analysis and investigations.

3.36.1 Credit Hours

3

3.36.2 Prerequisites

COMP 150: Introduction to Computing or COMP 170: Introduction to Object-Oriented Programming or COMP 215: Object-Oriented Programming with Mathematics/MATH 215: Object Oriented Math Programming

COMP 264: Introduction to Computer Systems or COMP 317: Social, Legal, and Ethical Issues in Computing or COMP 343: Introduction to Computer Networks

3.36.3 Description

The course introduces the fundamentals of computer/network/internet forensics, analysis and investigations.

3.36.4 Outcome

The student will learn Computer Software and hardware relevant for analysis and investigative and evidence-gathering protocols.

3.36.5 Syllabi

Semester/Year	Instructor	URL
Fall 2014	Tom Yarrish	https://drive.google.com/file/d/0B5gCIDnivRb5VXFxakw1eDVxUEU/edit?usp=sharing

3.37 COMP 341: Human-Computer Interaction

3.37.1 Credit Hours

3

3.37.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

3.37.3 Description

This course studies the interaction between humans and computer-based systems. The course will provide students with the methods for evaluating, designing, and developing better interfaces between humans and systems. Students will acquire an awareness of different design and evaluation methods as well as practical, effective, and cost-conscious methods for improving systems and their interfaces.

3.37.4 Syllabi

Semester/Year	Instructor	URL
Spring 2013	Dr. Albert	http://mva.me/edu/hci/

3.38 COMP 343: Introduction to Computer Networks

This course surveys packet-switched computer networks and attendant communication protocols, using the TCP/IP protocol suite on which the Internet is based as the primary model. Some Java programming is required.

3.38.1 Credit Hours

3

3.38.2 Prerequisites

COMP 264: Introduction to Computer Systems or COMP 271: Data Structures

3.38.3 Description

This course surveys the various levels of a packet-switched computer network, using the TCP/IP protocol suite as the primary model. Other network protocol stacks (e.g., Novell) may also be considered as time permits. At the Physical and Data Link Layers, various protocols such as Ethernet and Token Ring are compared, and their implications for network topology are considered. At the Network Layer, a wide variety of routing protocols and name resolution protocols are studied. At the Transport Layer, students are introduced to the various methods for building end-to-end reliability on top of less reliable lower layers. Finally, at the Application Layer a variety of standard protocols such as telnet, ftp, and electronic mail are examined, together with the related issues of security and authentication. Some programming in the C language is required.

3.38.4 Outcome

Students will understand how the Internet is constructed, how data is routed to its destination, how connections are made, how congestion is handled, and how security can be addressed.

3.38.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Dr. Dordal	http://webpages.cs.luc.edu/~pld/courses/443/fall13/

3.39 COMP 344: Web Services Programming

3.39.1 Credit Hours

3

3.39.2 Prerequisites

- COMP 313: Intermediate Object-Oriented Development
- instructor permission if prerequisite is missing

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

3.39.3 Description

Web services are building blocks for enterprise applications that use open data exchange standards and transport protocols to exchange data with calling clients. This course studies the architectures, frameworks, and tools required to develop and compose web services and clients, as well as integrate service-oriented systems with legacy systems.

3.39.4 Syllabus

Offering	Instructor	URL
Fall 2012	Dr. Laufer	http://laufer.cs.luc.edu/teaching/433

3.40 COMP 346: Introduction to Telecommunications

This course introduces the fundamental concepts of telecommunication networks, including requirements of voice networks, analog versus digital transmission, data link protocols, SONET, ATM, cellular phone systems, and the architecture of the current telephone system.

3.40.1 Credit Hours

3

3.40.2 Prerequisites

COMP 264: Introduction to Computer Systems or COMP 271: Data Structures

3.40.3 Description

This course introduces the fundamental concepts of telecommunication networks. Underlying engineering principles of telephone networks, computer networks and integrated digital networks are discussed. Topics in the course include: telephone and data networks overview; OSI layers; data link protocol; flow control, congestion control, routing; and local area networks (Ethernet, Token Ring and FpI).

3.40.4 Outcome

Students will understand how modern telephone systems work.

3.40.5 Syllabi

Semester/Year	Instructor	URL
Spring 2013	Dr. Dordal	http://webpages.cs.luc.edu/~pld/courses/346/spr13/

3.41 COMP 347: Intrusion Detection and Computer Forensics

This course covers techniques and algorithms for detecting unusual usage patterns that typically signal a break-in, including techniques for detecting evasive or stealthy attacks. Also covered are differences in detecting local versus network intruders. Additional topics: computer viruses, computer security management, computer forensics.

3.41.1 Credit Hours

3

3.41.2 Prerequisites

COMP 150: Introduction to Computing or COMP 170: Introduction to Object-Oriented Programming

3.41.3 Description

This course will cover techniques for detecting the unusual usage patterns that typically signal a break-in. The course will also consider differences in detection of local intruders versus intrusion over networks. Finally issues in the prosecution of those breaking in to computers, particularly evidentiary issues are explored.

3.41.4 Outcome

Students will learn to configure ID systems (e.g. SNORT) and analyze their output. They will also understand both network-based and host-based monitoring techniques.

3.41.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Corby Schmitz	https://drive.google.com/file/d/0B5gCIDnivRb5V1hQNW9FTVphV00/edit?usp=sharing

3.42 COMP 348: Network Security

This course continues some of the topics introduced in COMP 347. The course covers methods and tactics to keep network attackers at bay and teaches mechanisms to identify and potentially stop potential intruders. Analyses of specific attack mechanisms may be considered.

3.42.1 Credit Hours

3

3.42.2 Prerequisites

COMP 264: Introduction to Computer Systems or COMP 271: Data Structures

3.42.3 Description

This course will involve a discussion of the methods and tactics used to keep attackers at bay as well as the mechanisms by which we can identify and potentially stop potential “bad guys.” It will involve the following topics as they all relate to the overall security posture which makes computing safer: Encryption, authentication, firewalls, NAT/PAT, restricted access policies, intrusion detection and other security frameworks. The goal is to gain an understanding of how to secure computers and computing environments. Instructor permission is based on relevant industry experience with networking including TCP/IP.

3.42.4 Outcome

An understanding of how to secure networks using encryption, authentication, firewalls, NAT/PAT, restricted access policies, intrusion detection and other security frameworks.

3.42.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Corby Schmitz	https://drive.google.com/file/d/0B5gCIdnivRb5ZEdMTVZybHQ0U2s/edit?usp=sharing

3.43 COMP 349: Wireless Networks and Security

This course will explore the wireless standards, authentication issues, and common configuration models for commercial versus institutional installations and analyze the security concerns associated with this ad-hoc method of networking.

3.43.1 Credit Hours

3

3.43.2 Prerequisites

COMP 264: Introduction to Computer Systems or COMP 271: Data Structures

3.43.3 Description

In a mobile world, the ability to gain network access in a convenient manner, but yet securely, is becoming more and more of a requirement. This course will explore the wireless standards, authentication issues, common configuration models for commercial versus institution installs and analyze the security concerns associated with ad-hoc and standards-based methods of networking.

3.43.4 Outcome

Students will gain an understanding of wireless networking, protocols, and standards and security issues.

3.43.5 Syllabi

Semester/Year	Instructor	URL
Summer 2013	Corby Schmitz	https://drive.google.com/file/d/0B5gCIDnivRb5Y3p4a2xC5WZxbUE/edit?usp=sharing

3.44 COMP 351: Network Management

This course introduces the current state of the art in automated management of computer networks, including protocols such as SNMP and its attendant naming conventions, network management systems, and important issues in administrative network configuration.

3.44.1 Credit Hours

3

3.44.2 Prerequisites

COMP 264: Introduction to Computer Systems or COMP 271: Data Structures

3.44.3 Description

Networks today are high-speed, heterogeneous, large-scale and delivers different media including data, audio and video. How do you effectively manage today's complex computer networks? This class provides complete yet accessible answers to network managers and researchers in this field. The course covers the basics of network management, alternative architectures, evaluation techniques, network management system components, SNMP and CMIP management protocols and the ISO network management applications: fault management, performance management, configuration management, security management, and accounting management. The course emphasizes the practical experience of developing network and distributed systems management tools using the SNMP++ and AdventNet wrappers. This course also highlights the latest advances in networks and distributed management area and shows case studies of academic and industrial systems such as HiFi, SMARRT, OpenView, NetView and Tivoli.

Class meets with INFS 793.

3.44.4 Outcome

Students will become familiar with the SNMP protocol, with how large-scale Network Management Systems operate and are configured, and with advanced network configuration.

3.44.5 Syllabi

Semester/Year	Instructor	URL
Spring 2011	Dr. Dordal	http://webpages.cs.luc.edu/~pld/courses/netmgmt/spr11/

3.45 COMP 353: Database Programming

This course introduces relational and object databases to support database creation and application development. Use of commercial database products will give a practical orientation.

3.45.1 Credit Hours

3

3.45.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

3.45.3 Description

This course covers the fundamentals of database application development using C++, C, or Java by accessing a transaction-oriented database server. A commercial database environment such as Oracle is used. Apitonal topics may include enabling access to database via the web, and administering large databases.

3.45.4 Outcome

Students will learn SQL, database design and application development using the latest software tools. Students will also learn techniques for web based data retrieval and manipulation.

3.45.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Dr. Sekharan	https://drive.google.com/file/d/0B5gCIDnivRb5SVhFck9JYzJzMTg/edit?usp=sharing
Spring 2013	Dr. Dordal	http://webpages.cs.luc.edu/~pld/courses/353/spr13/

3.46 COMP 356: Computer Principles of Modeling & Simulation

3.46.1 Credit Hours

3

3.46.2 Prerequisites

MATH 215: Object Oriented Math Programming or COMP 215: Object-Oriented Programming with Mathematics or COMP 170: Introduction to Object-Oriented Programming

MATH 132: Applied Calculus II or MATH 162: Calculus II

STAT 203: Statistics

3.46.3 Description

The tool of simulation is probably the most useful tool for analyzing problems which arise in real applications which are much too complicated to be analyzed mathematically. One example is the study of inventory control policies. When should the inventory be checked? How many units should be ordered? What are the anticipated consequences of these decisions? We simulate the random character of the demand for the product and the delay in receiving orders of the product. The objective is to provide management with relevant information for constructing an acceptable inventory policy.

3.46.4 Syllabi

No recent syllabi available.

3.47 COMP 362: Computer Architecture

This course covers computer design from the level of digital logic and circuit design to high-level computer organization.

3.47.1 Credit Hours

3

3.47.2 Prerequisites

COMP 264: [Introduction to Computer Systems](#) or Comp 360 or comparable background, including but not limited to the following:

- Understanding of basic computer organization, including familiarity with such components as CPU, ALU, multiplexors, registers, main memory, caches, and buses
- familiarity with the roles of compilers, assemblers, and operating systems
- some familiarity with assembly language
- ability to understand simple C programs and to run programs in a UNIX environment, and
- familiarity with the representation of numbers in digital computers

3.47.3 Description

This course presents key principles underlying the design of modern digital computers. The course introduces quantitative techniques used to guide the design process. It describes CPU performance issues and introduces instruction set architectures. The course then uses a hypothetical computer design, with a simple RISC architecture, to show how modern digital computers are implemented, first using a simple non-pipelined implementation, followed by a higher-performance pipelined implementation. The major hazards introduced by pipelining, including structural hazards, data hazards, and control hazards are discussed and techniques for overcoming them are described. Additional topics covered in this course include the design of the memory hierarchy in modern digital computers, caching and virtual storage techniques, multiprocessor systems, and distributed shared memory systems.

3.47.4 Outcome

A basic understanding of how computers work at many levels and how to use various analytical tools and techniques to design computer components.

3.47.5 Syllabi

No recent syllabi available.

3.48 COMP 363: Design and Analysis of Computer Algorithms

Theoretical design and analysis of computer algorithms may be supplemented by small amounts of programming.

3.48.1 Credit Hours

3

3.48.2 Prerequisites

- COMP 163: Discrete Structures or MATH 201: Elementary Number Theory
- COMP 271: Data Structures
- MATH 131: Applied Calculus I or MATH 161: Calculus I

3.48.3 Description

The central goal of this course is for students to gain basic skills in designing and implementing efficient and effective computer programs. The course begins by developing models and mathematical tools for measuring the efficiency of algorithms. Then students are introduced to a variety of useful data structures and to algorithms for a variety of fundamental problems. Finally, the course will provide an introduction to classification of computational problems into different complexity classes. The course will include a small amount of actual programming in addition to theoretical analysis.

3.48.4 Outcome

The ability to design and analyze efficient algorithms; understanding of the necessary models and mathematical tools; understanding of a variety of useful data structures and fundamental algorithms; exposure to the classification of computational problems into different complexity classes.

3.48.5 Syllabi

Table 3.1: :header: "Semester/Year", "Instructor", "URL" :widths: 15, 25, 50

Fall 2013	Dr. Albert	http://comp363.pacsites.org/
Spring 2013	Dr. Harrington	http://anh.cs.luc.edu/363/index.html

3.49 COMP 364: High-Performance Computing

This course covers parallel architectures and parallel models of computation. Algorithms for achieving high performance in various computational contexts are discussed. Models such as shared memory, message passing, and hybrid modes of computing are introduced.

3.49.1 Credit Hours

3

3.49.2 Prerequisites

COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

3.49.3 Description

This course is motivated by the realization that cpu speeds are levelling off at between 3GHz and 5GHz. The need for programs to be faster and more efficient is all the more important at a time when applications are getting increasingly larger and more complex. We will introduce techniques to gain performance boost in Java programs and C++ (or C) programs by discussing the use of multiple processors.

This course makes use of departmental HPC resources. Please see the Systems Handbook at <http://syshandbook.cs.luc.edu> for details about our various HPC computing systems and partner resources.

3.49.4 Outcome

Students will learn how to engineer solutions to practical problems in multiprocessor architectures and using large physical memories.

3.49.5 Syllabi

No recent syllabi available.

3.50 COMP 366: Microcomputer Design and Interfacing

3.50.1 Cross-Listing

Also Offered PHYS 366

3.50.2 Credit Hours

3

3.50.3 Prerequisites

COMP 264: Introduction to Computer Systems or PHYS 266

3.50.4 Description

This course includes lecture and laboratory work. Topics that the course will hit on are; Microprocessor logic, instruction, and clocked sequential circuits; memory devices; data acquisition, manipulation and transfer circuitry; machine and assembly languages; microprocessor support devices.

3.50.5 Syllabi

Semester/Year	Instructor	URL
Fall 2014	William Honig	http://cs.luc.edu/whonig/comp-366-488

3.51 COMP 370: Software Quality, Metrics, and Testing

The course teaches software testing and quality control concepts, principles, and techniques including black box and white box testing, coverage testing, test case development, and regression testing.

3.51.1 Credit Hours

3

3.51.2 Prerequisites

COMP 271: Data Structures

3.51.3 Description

In this programming intensive course, students will learn effective automation, testing, and use of software metrics through the practices of Test Driven Development and Continuous Deployment. The first half of the course will focus on the fundamentals of Test Driven Development and test automation. The second half of the course will build upon those skills and allow the students to create acceptance test and deployment automation tools. Finally, students will learn how to measure user feedback effectively, thereby allowing them to safely deploy changes to running production software multiple times per day, rather than once every few weeks or months.

After taking this course, students should be able to:

- Employ Test Driven Development to create automated unit tests and improve the design of software.
- Create tools for build, test, and deployment automation.
- Understand the benefits and costs of automated acceptance testing.
- Use automated tests and metrics to address cross-cutting concerns such as performance and scalability.
- Possess the basic skills necessary to create, test, deploy, and maintain an application written for a cloud computing environment.

3.51.4 Outcome

Students will learn how to prevent errors, how to get ‘bugs’ out of software, and be able to apply this knowledge in other courses and projects.

3.51.5 Syllabi

Semester/Year	Instructor	URL
Fall 2014	Conrad Weisert	http://webpages.cs.luc.edu/~cweisert/COMP370/syllabus.html

3.52 COMP 372: Programming Languages

There are over two thousand programming languages. This course studies several languages that represent the much smaller number of underlying principles and paradigms.

3.52.1 Credit Hours

3

3.52.2 Prerequisites

COMP 313: Intermediate Object-Oriented Development

3.52.3 Description

There are over two thousand programming languages. This course studies several languages that represent the much smaller number of underlying principles and paradigms.

3.52.4 Outcome

An understanding of key principles and paradigms underlying the design and implementation of commonly used programming languages; exposure to formal mechanisms for describing language syntax and semantics; programming experience in several representative languages.

3.52.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Dr. Läufer	http://laufer.cs.luc.edu/teaching/372

3.53 COMP 373: Objects, Frameworks, and Patterns

Object-orientation continues to be a dominant approach to software development. This advanced programming-intensive course studies object-oriented analysis, design, and implementation from a design patterns perspective.

3.53.1 Credit Hours

3

3.53.2 Prerequisites

COMP 313: Intermediate Object-Oriented Development

You need to have knowledge of Java, C# or a similar object-oriented language, data structures, and fair sophistication with OOP - some experience with designing interacting, cooperating classes that would come in an intermediate discussion of software patterns. Software engineering is recommended but not required like the background listed above.

3.53.3 Description

Object-oriented programming has become the dominant software development paradigm of the 1990s. This course assumes familiarity with the main constituents of the object-oriented methodology:

- OOP = abstraction + inheritance + polymorphism

Building on this foundation, the course studies three major topics:

Design Patterns

First, the course discusses patterns, reusable solutions to recurring software design problems. Common design patterns such as Composite, Decorator, and Command typically involve several classes related by composition and inheritance.

Implementation

Next, the course examines how object-oriented language features such as composition, encapsulation, inheritance, and dynamic binding can be implemented. These features are studied in the context of an interpreter for a simplified object-oriented language.

Components

Finally, the course explores programming with reusable components. Specifically, the standard features of component architectures are discussed: properties, events, methods, and persistence, and introspection.

Other Information

This course is heavily project-oriented. Students study each major topic in the context of a substantial programming project. The reuse of existing class libraries and software components is emphasized.

Grading will be based upon the following components: programming projects, quizzes, in-class exams, and the final exam.

3.53.4 Outcome

Proficiency in the use of object-oriented languages, frameworks, and patterns; advanced understanding of key language mechanisms such as delegation, inheritance, polymorphism, and reflection; familiarity with object-oriented modeling and development tools and test-driven development.

3.53.5 Syllabi

Semester/Year	Instructor	URL
Fall 2014	Berhane Zewdie	https://drive.google.com/file/d/0B5gCIDnivRb5RGZteWNnN0x4R0U/edit?usp=sharing

3.54 COMP 374: Introduction to Operating Systems

This course introduces principles of operating systems and how they are designed. Various important parts of operating systems such as memory addressing, file structures, processes, and threads are covered.

3.54.1 Credit Hours

3

3.54.2 Prerequisites

COMP 264: Introduction to Computer Systems or COMP 271: Data Structures

3.54.3 Description

This is an introductory course in Operating Systems discussing both standalone and distributed environments. The focus of the course is to understand the underlying technologies that make contemporary operating systems work efficiently. We will discuss processes, threads, synchronization, I/O, file systems, memory management, transactions and system coordination techniques.

Through this course we will discover how these technologies are integrated into the systems we use today and then utilize these technologies and apply them to practical applications. This is NOT a programming intensive course, however, students will be expected to complete some programming in C with plenty of examples and assistance along the way. You certainly don't need to know how to program in C today. In addition, the completion of a technical paper on an OS related subject will also be expected.

Everyone currently in, or planning to enter the IT field should have a grasp on these components as they effect every area of the day to day operation of IT technology. Reference systems will include both Linux and Windows.

3.54.4 Outcome

Students will learn the different parts of an operating system at a functional level and how they interact with each other.

3.54.5 Syllabi

Semester/Year	Instructor	URL
Spring 2013	Joe Kaylor	http://osdi.cs.courseclouds.com
Spring 2012	Joe Kaylor and George K. Thiruvathukal	http://osdi.cs.courseclouds.com

3.55 COMP 376: Formal Languages and Automata

This course introduces formal language theory, including such topics as finite automata and regular expressions, push-down automata and context-free grammars, Turing machines, undecidability, and the halting problem.

3.55.1 Credit Hours

3

3.55.2 Prerequisites

COMP 163: Discrete Structures or MATH 201: Elementary Number Theory or MATH 212: Linear Algebra

3.55.3 Description

This course will study three mutually related topics: languages, machines, and computability. The mathematical ideas developed in this course are useful in many areas of computer science, including the design and specification of programming languages, construction of compilers, and exploring the capabilities and limitations of mechanical computation. This subject is important for the scientific foundations it lays for computer science, for the philosophical concerns it raises about the nature of computation, and for the sheer elegance it brings in to the studies related to a variety of applications. Some of the most fundamental discoveries in computer science identify connections among languages, machines, and computability. Furthermore, some of the most challenging questions at the heart of computer science also arise from these topics. The course will cover a majority of the following topics: regular languages, finite automata, determinism and nondeterminism in finite automata, applications to searching and pattern matching, context-free languages, push-down automata, applications to compiler design, computability theory, Church-Turing thesis, Turing machines, undecidability, recursive and recursively enumerable languages, reductions among languages, resource-bounded computation, Kolmogorov complexity.

3.55.4 Outcome

An understanding of the theoretical underpinnings of computability and complexity in computer science.

3.55.5 Syllabi

No recent syllabi available.

3.56 COMP 377: IT Project Management

3.56.1 Credit Hours

3

3.56.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

3.56.3 Description

This course is an introduction to the philosophy and practice of project management. The course involves a student group project to investigate and plan a 'real world' IT project that specifies project objectives, schedules, work breakdown structure and responsibilities, a written interim report, and a final oral and written report.

3.56.4 Outcome

Students will learn time management, work-flow management, and team dynamics to design, implement and test large-scale software projects.

3.56.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Conrad Weisert	http://webpages.cs.luc.edu/~cweisert/COMP477/syllabus.html

3.57 COMP 378: Artificial Intelligence

This course introduces artificial intelligence theory and programming.

3.57.1 Credit Hours

3

3.57.2 Prerequisites

COMP 271: Data Structures

3.57.3 Description

Concepts of problem representation and search, knowledge representation and reasoning. Selected topics may include game playing, theorem proving, natural language processing, machine learning, connectionist models, expert systems, robotics, pattern recognition, machine vision, neural networks.

3.57.4 Outcome

Student will learn basic theory of artificial intelligence and be able to build small applications based on it.

3.57.5 Syllabi

No recent syllabi available.

3.58 COMP 379: Machine Learning

3.58.1 Credit Hours

3

3.58.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming

- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

3.58.3 Description

Machine learning is the process of making predictions and decisions from data without being explicitly programmed. Topics include a variety of supervised learning methods. Ensemble approaches are used to combine independent models efficiently. Unsupervised and semi-supervised methods demonstrate the power of learning from data without an explicit training goal.

3.58.4 Outcome

Students in this course will learn how to apply sophisticated algorithms to large data sets to make inferences for prediction or decision making.

3.58.5 Syllabi

Topic	Semester/Year	Instructor	URL
Machine Learning	Fall 2015	Dr. Albert	http://machinelearning.pacsites.org

3.59 COMP 380: Introduction to Computer Graphics

This course introduces modern theory and practices in 3-D computer graphics, stressing real-time interactive applications using libraries like OpenGL.

3.59.1 Credit Hours

3

3.59.2 Prerequisites

COMP 271: Data Structures

The requirements for the course are some familiarity with C or C++, basic linear algebra (matrices and vector geometry), and differential calculus.

3.59.3 Description

Computer graphics is the art and science of producing images using a computer. We will study the theory of computer graphics, in particular 3D rendering, while gaining a working knowledge of the OpenGL graphics library. Much of the computer graphics we see in the media was created using software based on the Open GL graphics library, which has quickly become an industry standard.

A word of warning-computer graphics makes considerable use of mathematics-elementary linear algebra, vector analysis and differential calculus.

Other Information

There will be 7-8 programming assignments, a midterm, and a final. You will probably do your assignments using Visual C++ under either Windows 95 or Windows NT.

3.59.4 Outcome

Student will learn how to program real-time interactive applications using libraries like OpenGL.

3.59.5 Syllabi

No recent syllabi available.

3.60 COMP 381: Bioinformatics

Students will engage in the applications of computer-based tools and database searching to better understand DNA and protein structure, function, and evolution.

3.60.1 Credit Hours

3

3.60.2 Prerequisites

BIOL 101: General Biology I (or equivalent) or NTSC 104

3.60.3 Description

This course is cross-listed with Biology. Students will engage in the applications of computer-based tools and database searching to better understand DNA and protein structure, function, and evolution.

3.60.4 Outcome

Students will be able to apply their understanding of genetic and evolutionary processes to the appropriate use of computer software and manipulation of large databases to accurately predict structural, informational, functional, and evolutionary characteristics of DNA and protein sequences.

3.60.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Dr. Putonti	https://drive.google.com/file/d/0B5gCiDnivRb5UVVGblJLUFZycHc/edit?usp=sharing

3.61 COMP 382: Introduction to Compilers

This course covers the basics of writing a compiler to translate from a simple high-level language to machine code. Topics include lexical analysis, top-down and LR parsing, syntax-directed translation, and code generation and optimization. Students will write a small compiler.

3.61.1 Credit Hours

3

3.61.2 Prerequisites

COMP 264: Introduction to Computer Systems and COMP 313: Intermediate Object-Oriented Development

3.61.3 Description

This course covers the basics of writing a compiler to translate from a simple high-level language to machine code. Topics include lexical analysis, top-down and LR parsing, syntax-directed translation, and code generation and optimization. Students will write a small compiler.

3.61.4 Outcome

Students will learn how a compiler is built.

3.61.5 Syllabi

No recent syllabi available.

3.62 COMP 383: Computational Biology

This course presents an algorithmic focus to problems in computational biology. It is built on earlier courses on algorithms and bioinformatics. Problems and solutions covered in this course include gene hunting, sequence comparison, multiple alignment, gene prediction, trees and sequences, databases, and rapid sequence analysis.

3.62.1 Credit Hours

3

3.62.2 Prerequisites

COMP 271: Data Structures

COMP 163: Discrete Structures

BIOL 388: Bioinformatics

3.62.3 Description

This course presents an algorithmic focus to problems in computational biology. As such it is built on earlier courses on algorithms and bioinformatics. Problems and solutions covered in this course include Gene Hunting, Sequence Comparison, Multiple Alignment, Gene Prediction, Trees and Sequences, Databases and Rapid sequence analysis.

3.62.4 Outcome

Students will learn, in detail, foundational methods and algorithms in bioinformatics.

3.62.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Dr. Putonti	https://drive.google.com/file/d/0B5gCIDnivRb5QINwa05tSjVFWkU/edit?usp=sharing

3.63 COMP 384: Metagenomics

Exploration of next-generation sequencing technologies for assessing microbial diversity in ecological niches.

3.63.1 Credit Hours

3

3.63.2 Prerequisites

BIOL 282 and Instructor Consent

3.63.3 Description

This course is cross-listed with Biology.

Exploration of next-generation sequencing technologies for assessing microbial diversity in ecological niches.

3.63.4 Outcome

Students will gain hands-on experience with metagenomic methodologies while working in an interdisciplinary, collaborative setting.

3.63.5 Syllabi

Semester/Year	Instructor	URL
Fall 2014	Dr. Putonti	https://drive.google.com/file/d/0B5gCIDnivRb5ZkctZERJRzFQRDg

3.64 COMP 386: Computational Neuroscience

Introduces computational methods to understand neural processing in the brain.

3.64.1 Credit Hours

3

3.64.2 Prerequisites

COMP 150 or COMP 170 or Instructor Consent

3.64.3 Description

Introduces computational methods to understand neural processing in the brain. Levels of representation from low-level, temporally precise neural circuits to systems-level rate-encoded models, to information-theoretic approaches. Emphasis on sensory systems, primarily vision and audition, most readily demonstrating the need for such computational techniques.

3.64.4 Outcome

Appreciation that many aspects of neuroscience cannot be understood without appropriate mathematical or computational frameworks, and ability to adeptly apply these frameworks in the various domains of neuroscience.

3.64.5 Syllabi

Semester/Year	Instructor	URL
Fall 2015	Dr.Albert	https://drive.google.com/file/d/0B5gCIDnivRb5ZkctZERJRzFQRDg

3.65 COMP 388: Topics in Computer Science

3.65.1 Credit Hours

3

3.65.2 Prerequisites

Department and instructor consent

3.65.3 Description

This course is used to introduce emerging topics in computer science that do not yet have a regular course number. Content of the course varies. Recent topics have included

- Enterprise Software Development

- Rapid Application Development Methodology (.NET)
- Robotics Software Development
- System Standards and Requirements
- Topics in Algorithms

3.65.4 Outcome

Understand an emerging area of Computer Science.

3.65.5 Syllabi

3.68 COMP 390: Broadening Participation in STEM (Computing, Math & Science)

Students will learn about underrepresentation of various population groups in STEM fields (science, technology, engineering, mathematics), as well as some of the reasons and negative effects of this situation. They will learn about techniques and educational materials for ameliorating this situation and will engage in relevant service learning activities.

3.68.1 Credit Hours

3

3.68.2 Prerequisites

None

3.68.3 Description

Students will learn about underrepresentation of various population groups in STEM fields (science, technology, engineering, mathematics), as well as some of the reasons and negative effects of this situation. They will learn about techniques and educational materials for ameliorating this situation and will engage in relevant service learning activities.

3.68.4 Outcome

Students gain first-hand experience with broadening STEM participation and seeing how they can make a difference in the lives of other students and contribute to national needs.

3.68.5 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Dr. Greenberg	http://rig.cs.luc.edu/~rig/courses/syllabi/c390f13.pdf

3.69 COMP 391: Internship in Computer Science

Students work outside the classroom applying and extending their computer science skills, typically for at least 150 hours for 3 credits. A memorandum of understanding is required between a student, his or her employer, and the Undergraduate Program Director, followed by final reports from the student and the employer.

3.69.1 Credits

Variable, 1-6

Undergraduate Internship Coordinator approval

3.69.2 Description

An opportunity to obtain experience in software development, design, or related activities in computer science in a professional setting.

Selection for Internships in Computer Science:

1. Students interested in internship must first find an employer/supervisor willing to provide them with a job. Internships are most advantageous to students if they already have considerable experience in upper level Computer Science courses. Skills from upper level courses are also going to help students be hired.
2. The student must make a formal request to the Undergraduate Internship Coordinator, supplying a job Description. The Undergraduate Internship Coordinator is looking for positions where the student will use and extend knowledge from upper level courses.
3. The Undergraduate Internship Coordinator reviews the student's performance in general and in relevant Comp classes, and either approves the request or suggests what further steps the student should make before securing an internship.
4. By the start of the internship the student must deliver the Internship Memorandum of Understanding (see below) signed by both the supervisor, student, and Undergraduate Internship Coordinator, outlining the expectations of all parties.

Presently the standard expectation is 50 hours of work relevant to a computer science education for each unit of credit. Hence 150 hours are expected for 3 credits. Work may overlap terms, and then credit is offered for the term in which the internship is completed. For more formal details, please see the Computer Science Internship Memorandum of Understanding (MOU), in [PDF format](#) or in [MS-Word format](#).

Note 1: This is a course like any other where you need to be registered on time for the term (fall semester, spring semester, or summer) in which the internship will end. Many people have been denied registration for 391 because they tried to register late, concentrating on the job, not the registration. Also you must get the approval of the Undergraduate Internship Coordinator first. Plan ahead.

Note 2: In order to get a grade recorded, the final reports of the student and the employer must be received by the Undergraduate Internship Coordinator before the last week of the finals week. Make sure the end date on the internship is early enough to fit with that. You may continue with more hours in your job after the for-credit internship part.

Note 3: You do not need to be classified as an “intern” in your job. It can be a regular job. The internship only comes from the relationship to your academic credit and the supporting documents indicated in the MOU. The overhead for the employer is comparable to a letter of recommendation.

Internship opportunities that the Computer Science Department has received are posted here and in the department on the fourth floor of Lewis Towers. Another resource is the [university career and internship center](#). Students may also find a position through their own contacts.

3.69.3 Outcome

Application of classroom skills to real-world situations.

3.70 COMP 397: Research Seminar

Supplements CS Seminar by targeting students directly engaging in research and facilitating contributions in ongoing projects.

3.70.1 Credit Hours

1 (may be taken up to three times)

3.70.2 Prerequisites

Undergraduate Program Director approval

3.70.3 Description

Supplements CS Seminar by targeting students directly engaging in research and facilitating contributions in ongoing projects. Progress in outside projects tracked through milestones such as abstracts, small fellowship-style proposals, informal updates, and outcome-oriented goal setting. Emphasizes creating lasting impacts through establishing project continuity and presenting posters, papers, and slide shows.

3.70.4 Outcome

Regular progress on research projects and final presentations of results for demonstration to department faculty and students, and potential use at professional conferences.

3.70.5 Syllabi

None

3.71 COMP 398: Independent Study

The student and a sponsoring faculty member will determine an advanced topic for the student to work on.

3.71.1 Credit Hours

Variable (presently 1-3)

3.71.2 Prerequisites

Undergraduate Program Director approval

3.71.3 Description

Independent study of selected topics in computer science under the supervision of a faculty member.

The Process

- Find a professor who is interested in supervising what you want to do, or who has a project in mind that you are interested in doing. Look to professors you have had, or look at the research page on the web describing ongoing projects, or just ask professors.
- Discuss details of what your work will entail, the number of units of credit, and the expectations for grading.
- Write an email back to the professor, confirming the details of your discussion. Also include the semester you want to register, the number of units, and your student number (to aid the final registration). All this data is essential.
- The professor should respond, copying your data, and agreeing with your request, and the email should be copied to upd@cs.luc.edu.
- The department administrator should email all concerned when the registration is completed.

3.71.4 Outcome

Knowledge of an advanced topic.

3.72 COMP 399: Computer Science Seminar

3.72.1 Credit Hours

1 (may be taken up to three times)

3.72.2 Prerequisites

Undergraduate Program Director approval

3.72.3 Description

The department seminar is designed to bring together students interested in understanding and potentially engaging in extracurricular applications of computer science, with a focus on ongoing research. Speakers will include department faculty, research students, and invited outside speakers. Students will be asked to read relevant literature and participate in discussions.

3.72.4 Outcome

Knowledge of an advanced topic.

Students will be exposed to a wide range of topics in computer science, participate in discussions, and provide feedback to assess their general understanding of the presented material.

3.72.5 Syllabi

None

3.73 ISOM 349: Project Management

3.73.1 Credit Hours

3

3.73.2 Prerequisites

Junior Standing; Grade of C- or higher in ACCT 201 & MGMT 201

3.73.3 Description

The art and science of project management and systems development as applied to a variety of business, industrial, and public management situations. Covers all phases of the project life-cycle; techniques for planning, scheduling and control of projects; project organizations; and techniques for building effective project teams.

3.73.4 Syllabi

No recent syllabus available.

GRADUATE DEGREE PROGRAMS

4.1 Masters Programs Overview

The [M.S. in Information Technology](#) is management and business process facing. It is distinguished from a pure business degree by its requirement and frequent use of basic programming and other technical skills. If you end up managing technical workers, you will have an edge over those with pure business degrees.

The [M.S. in Software Engineering](#) is focused on knowledge and abilities to produce high quality software for many different domains.

The [M.S. in Computer Science](#) is more foundational, requiring you to get experience with a broad range of core computer science concepts. It is our only program with a [Thesis Option](#). Students from this program are the ones most likely to go on to a PhD program.

[Masters Programs Prerequisites](#) are required for all programs.

Undergraduates presently in our department with strong background are urged to consider overlapping one of these programs with their undergraduate work via the [B.S./M.S. Dual Degree Programs](#).

Electives: Computer Science is a broad and moving target. The full range of electives common to all programs is very helpful in providing breadth and flexibility. Only 3-5 courses out of 10 are specified or limited by the individual program. The overlap also means that it is generally fairly easy to switch programs if your interest is particularly stimulated by an elective more strongly associated with another program.

The [M.A. in Digital Humanities](#) is a separate interdisciplinary program, partnered with Computer Science.

Administrative and admissions information for the graduate program is in a separate graduate handbook, with formats [html](#) and [pdf](#). In particular note the Graduate Handbook sections for

- [Prospective students](#)
- [Teaching assistantships and financial aid](#)

4.1.1 Time Requirements

Normally it takes 16 months for full-time students to earn a M.S. in Computer Science, Software Engineering, or Information Technology from Loyola. The M.S. in Computer Science may need extra time **if** the [Thesis Option](#) is chosen. Students who attend part time normally take 2-3 years. Though rarely an issue, there is a five year overall time limit, and this period may be extended only by special action of the Dean of the Graduate School.

4.1.2 Pursuing Multiple M.S. Degrees

We are often asked about whether it is possible to complete more than one M.S. degree (e.g. and M.S. in Computer Science and an M.S. in Software Engineering). The answer is no, unless you complete 54 hours of study (30 hours of

courses for the each degree, except for 6 credits transferred into the second degree). It is impractical and expensive, and we don't think it serves students well. Our goal is to prepare you for a serious career (professional and/or academic) after completing *one* graduate degree.

4.1.3 Non-Degree Students and Continuing Education

Students who wish to continue taking courses may do so after completing their degree as non-degree students. We also encourage our students to maintain connections through our professional and social networking groups. Many of our students continue to be involved in research laboratories such as the Emerging Technologies Laboratory (see <http://www.etl.luc.edu>).

4.2 Masters Programs Prerequisites

All students need the equivalent knowledge of [COMP 170: Introduction to Object-Oriented Programming](#) and [COMP 271: Data Structures](#). The topics for these courses are outlined in *Two Basic Programming Prerequisites*. This knowledge is prerequisite to essentially all the graduate courses in the Computer Science Department, with the exception of [COMP 417: Social, Legal, and Ethical Issues in Computing](#).

Students in the Computer Science Graduate Program need the strongest preparation. Most will have an undergraduate degree or at least the first two years of foundational undergraduate courses. This would include the addition of equivalents of our [COMP 163: Discrete Structures](#) and [COMP 264: Introduction to Computer Systems](#) and [COMP 363: Design and Analysis of Computer Algorithms](#) to the two courses already listed above.

Software Engineering students are in the middle. The background for the Computer Science student is helpful, but adept transitioning students may manage with the two basic courses that the IT students need.

Many of our best students in Information Technology and Software Engineering have transitioned from other fields.

You can handle missing prerequisite knowledge in a number of ways:

1. Take them somewhere else (possibly cheaper and more convenient to your location, but possibly not as good or not covering mostly what we want)
2. Take them at Loyola: Take just the courses we want, with support of our faculty, giving you an opportunity to get into our community and build relationships with faculty and students.
 - This can be done before entering the Graduate program as a non-degree undergrad (cheaper undergraduate tuition).
 - You can get both prerequisites in one semester with our special compressed prep courses [COMP 388: Foundations of Computer Science 1](#) and [COMP 388: Foundations of Computer Science 2](#). See a fuller discussion below.
 - The compressed prerequisites can be taken after admission to the graduate program. Then you become a full-time graduate student if you add a third course - a graduate course not requiring the prerequisites. (faster full-time finish!)

Compressed prep courses: In fall or spring you have the opportunity to take a compressed intensive sequence of prerequisites in one semester: two 7-8 weeks courses in succession, each with the same total contact hours of regular 15 week courses. These cover at least the content of [COMP 170: Introduction to Object-Oriented Programming](#) and [COMP 271: Data Structures](#). To be a full-time graduate student at the same time, the most common additional course is the required [COMP 417: Social, Legal, and Ethical Issues in Computing](#), which has no prerequisite. Note that 6 1/4 hours of class a week in the compressed prerequisites with all the work that goes with them does require some dedication! Many transitioning students with full-time jobs have found this to be *too much* to take on even without an additional grad course. You can see the speed of topics in [COMP 388: Foundations of Computer Science 1](#) by looking at the course website, <http://anh.cs.luc.edu/388Intro>.

You can spread your work out by getting an early start looking at the text used by Comp 170 and the compressed version: The text by Dr. Harrington and Dr. Thiruvathukal is free online, <http://introcs.cs.luc.edu/>, with accompanying videos. You are welcomed to use the online book whether you formally take our course or not.

Comp 170 or the compressed [COMP 388: Foundations of Computer Science 1](#) do not require any background in programming, but if you have no background in programming, then it IS important to have a math background in which you are comfortable with the material in a precalculus course like our Math 118, which includes *significant manipulation of functions*. If you have a previous modest introduction to programming, including defining and using functions, then the formal math background is not so important.

Students who neither have this math background nor any programming at all may well want to get a more gentle introduction to programming first, as in our Comp 150. It is offered fall and spring and online in the summer. If you do need the extra preparation like in Comp 150, then this will slow you down by a semester.

Please contact the Graduate Program Director with any questions at gpd@cs.luc.edu.

The next section, [Two Basic Programming Prerequisites](#), lists more details of material you should know before taking graduate courses in our department.

4.2.1 Two Basic Programming Prerequisites

Knowledge of the content below is prerequisite for almost all of the graduate courses in the Computer Science Department.

The descriptions below are for the courses at Loyola, in a pretty standard introductory sequence. If you took these subjects elsewhere, you are not likely to have the exact same collection of topics, but if you are close, there should not be much problem filling holes as needed.

Expectations from Introduction to Computer Science, COMP 170

List of top ten concepts you should understand at the end of [COMP 170: Introduction to Object-Oriented Programming](#) / ISOM 370, Introductory Object Oriented Programming (in Java, C#, C++ or a similar language):

1. Be able to distinguish between class and instance
 - Class is abstract representation or model (class aka type, abstract type, factory for objects). Class has field definitions (or attribute definitions) and operations (or methods) to implement its behaviors.
 - Instance (aka class instance, variable) is an actual, specific, concrete thing and has specific field values (or attribute values).
 - All instances of a class share the same operations and attribute definitions.
2. Know syntax rules and coding style
 - Learn the basic picky rules of Java syntax and use them correctly. Key items: placement of “;” use of case (“ClassSchedule” vs. “classSchedule”); distinguish declarations and executable statements.
 - Format code readably according to agreed upon style.
3. Use conditional control structures fully and correctly
 - Construct programs with “if...then”, and “if...then...else”. Understand nesting of control statements and blocks (“{“ and “}”).
 - Briefly, “Nesting, blocks, no dangles”.
4. Construct loops with control structures
 - Use “while”, “do”, and “for” control structures to implement algorithms successfully.
 - Briefly, “avoid never ending loops, avoid off-by-one problems”
5. Use the primitive types and operators appropriately

- Understand the use and limitations of the primitive Java types.
 - Know the most useful arithmetic, relational, and logical operators and use them in expressions, with parentheses when necessary.
6. Learn how to create good OO encapsulation
 - Achieve a deep understanding of the proper use of the access modifiers “private”, and “public”.
 - Be able to design well structured classes.
 - Know when and how to use “static”.
 7. Construct and understand methods fully
 - Define and use methods, including formal parameters and return values.
 - Distinguish between formal parameters (aka parameters) and arguments in the call to a method.
 - Comprehend scope and lifetime of objects. Understand visibility of objects and how to implement finding the right object at the necessary time.
 - Know how to ask a particular instance of a class to do something. Know how to construct associations between classes.
 - Understand what is happening is a nested stack of method calls.
 8. Be knowledgeable about important library container classes and arrays
 - Be able to declare and use containers like ArrayList and arrays. Understand how to find things in containers and arrays. Use index variables effectively.
 9. Perform simple input/output processing
 - Learn how to do basic input and output statements with an interactive user and with files. Be able to work with Strings.
 10. Understand OO Interfaces
 - Know how to define and use simple interfaces like List.

Expectations from Data Structures, COMP 271

1. OOP
 - Be able to write interface/abstract classes and implementations of data structures.
 - Understand subclassing mechanisms.
 - Understand overloading, overriding, dynamic binding, boxing and unboxing in OOP languages.
2. Mathematical context
 - Big-Oh notation, worst-case run time complexity and storage complexity of algorithms.
 - Be able to do performance analysis of code using big-Oh.
3. Data structures
 - Know and be able to use and implement abstract data types such as stacks, arraylists, vectors, queues, linked lists, hash tables, and hash sets.
 - Understand the time complexities of operations such as insert, delete, add, retrieve, on the above data structures and be able to obtain time complexities of other operations on similar, simple data structures.
 - Knowledge of hash functions, trees, graphs, and two dimensional arrays.
 - Knowledge of algorithms for problems including searching, and sorting (Quicksort, Mergesort, Heapsort etc.), string manipulations.

4. Core programming language concepts

- Knowledge of programming language storage paradigms such as static, stack, and heap.
- Be able to understand and use recursion in various problems.

4.3 M.S. in Computer Science

4.3.1 Overview

The M.S. in Computer Science provides foundations of Computer Science, while acknowledging that Computer Science is key to algorithms in the sciences. Other programs in the Computer Science Department with different foci are [M.S. in Information Technology](#) and the [M.S. in Software Engineering](#).

4.3.2 Curriculum

This program is for students entering the program in Spring 2014 or later. If you were enrolled in the program prior to Spring 2014 you may use the older degree requirements located [here](#).

Features Common to all Programs

- See the [Masters Programs Prerequisites](#).
- Each program requires a total of 30 credit hours, generally 10 three-credit courses.
- Students can receive up to 6 credit hours (replacing two of our courses) for graduate work taken elsewhere: See the [transfer credit section of the Graduate Student Handbook](#) for details.
- **Students who have taken undergraduate Loyola classes:** Many 400-level courses in the department have closely related 300-level analogues, e.g. [COMP 443: Computer Networks](#) and [COMP 343: Introduction to Computer Networks](#). Students who enter the MS program after taking a Loyola course in this category must choose to take 400-level courses that are not closely related to any 300-level courses taken earlier, unless they have GPD permission.

Overall, to achieve depth and breadth, Computer Science students must complete the following:

- Three (3) required courses.
- Three (3) restricted electives.
- Four (4) courses or 12 credits that are general electives.

Major Requirements (9 credits)

The following three courses are required by the program:

- [COMP 417: Social, Legal, and Ethical Issues in Computing](#)
- [COMP 413: Intermediate Object-Oriented Development](#)
- [COMP 460: Algorithms and Complexity](#)

The Graduate Program Director may approve the replacement of [COMP 413: Intermediate Object-Oriented Development](#) by an additional course on the Restricted Electives list in cases where the student's primary program focus is not on software development.

Restricted Electives (9 credits)

MS-CS students must also take three courses from the following list:

- COMP 433: Web Services Programming
- COMP 436: Markup Languages
- COMP 439: Distributed Systems
- COMP 442: Server-Side Software Development
- COMP 443: Computer Networks
- COMP 453: Database Programming
- COMP 464: High-Performance Computing
- COMP 471: Programming Languages
- COMP 473: Object-Oriented Programming
- COMP 474: Software Engineering

General Electives (12 Credits)

The elective course options are common for all programs, differing only in the total number of credits required.

Electives can be any COMP 400 level class or any CSIS class (courses actually taught in the Business School).

Students may take up to a maximum of 6 credit hours of [COMP 490: Independent Project](#) and/or [COMP 499: Internship](#).

There are numerous options for independent study, including a programming project, research, or a service-oriented project.

Thesis Option

MS students in the Computer Science degree program (only) may elect the MS thesis option.

Course work is strongly recommended over the thesis option, especially for those not planning on a research-oriented career. Many students pursuing the thesis option, therefore, would be considering a PhD program at another institution.

Students wishing to do a thesis should discuss this option as early as possible with the GPD.

Theses may involve research in purely theoretical computer science (for example, development or analysis of algorithms), or may involve development of a software package, or may involve instrumentation, measurement and analysis of existing systems (for example, studying network performance). Because of this wide range, there is no one formal course in research methods. Courses in the restricted-electives list above contain a significant component of area-specific integrated research-methods material. Students interested in writing a thesis are strongly urged to seek advising from the GPD or other faculty as early as possible as to which electives in this group will be the most appropriate for the student's proposed area of research.

Here is an outline of the steps toward your thesis. The ones in boldface are formal steps with documentation required by the Graduate School:

1. If you wish to write a thesis, first identify a faculty advisor and select a tentative topic or area of research. The existing program allows you to take up to 6.0 hours of [COMP 490: Independent Project](#). You will typically begin their research program in such a course, though you may also identify an advisor and select a tentative topic as part of a conventional classroom course.
2. Thesis/Dissertation Committee Recommendation

- The next step is for you to secure permission to pursue the thesis option from the Graduate Program Director.
- The Graduate Program Director, in consultation with you and your chosen advisor, recommends a thesis committee to the Graduate School. The committee will consist of at least three faculty members; normally the committee director will be the advisor.
- **For the formal Graduate School process you create the committee at the gsps link <https://gsps.luc.edu/>.** An email will then be sent to the director for approval and then the GPD.
- You will receive an email if your committee is formally approved by the Graduate School.

At least 50% of the committee must be comprised of Loyola graduate faculty; the director of the committee must have full graduate faculty status – see http://www.luc.edu/gradschool/about_facultystaff.shtml for the current list of full members.

3. Once the committee is approved, you may continue with your research in subsequent semesters registering for the zero-credit-hour Comp 595: Thesis Supervision, if available, or Comp 605: Masters Study, if Comp 595 is not listed. If you still need credit hours and have not already had the full number of hours of **COMP 490: Independent Project**, you can register for that instead. Students may register for any number of semesters of Comp 595/605, subject to time-to-degree-completion constraints.
4. Once you have your thesis committee approved, the thesis becomes a degree requirement. (This is important for international students.) You may, however, petition to revert back to non-thesis status; this requires permission of the Graduate Program Director and the Graduate School. At that point, you would be able to graduate without writing a thesis, if the coursework requirements were met. No reimbursement or credit will be received for any Comp 595, Comp 605, or other thesis-specific courses taken.
5. Ballot for the Approval of a Thesis/Dissertation Proposal
 - You will then prepare a formal research proposal, in consultation with your advisor. This proposal must be submitted to your committee for review. This sequence is monitored through gsps.
 - If you are submitting your proposal to the Institutional Review Board (IRB), you must have approval or exemption *before* the Graduate School approves your proposal. You do not need to submit proof, Graduate School will confirm. (This step is required for the use of human and animal subjects, and is not common for Computer Science.)
 - **A simple one to two paragraph abstract must be included in the proposal form on gsps.**
 - You will get notified once all members of the committee, the GPD, and the Graduate School approve the proposal through gsps.
 - You are now ready to “conduct research” for the project.
6. Ballot for Text and Oral Defense Form
 - Upon completion of your thesis, you will be required to formally defend your research. Schedule this with your committee. Your thesis should be in nearly final form.
 - Typically you should give the committee three weeks to read the final draft of the thesis before the defense date.
 - **For this requirement, you must download the defense ballot <http://www.luc.edu/media/lucedu/gradschool/pdfs/T%20&%20D%20defense%20ballot-DB.pdf>** and bring it with you to your defense. Your director and other committee member(s) will sign the ballot – this ballot then needs to go to the GPD for final approval.
 - The committee may require modifications before approving the thesis, or possibly reject it.
 - Once approved, the GPD will upload the ballot in gsps for Graduate School approval.
 - You will be notified once the process is complete.

7. Formatting the Thesis/Dissertation

- Every thesis/dissertation needs to be formatted according to the rules stated in the Graduate School's formatting manual <http://www.luc.edu/gradschool/formatting.shtml>.
- **Format check is a required step**; the deadlines, depending on the conferral date, are posted on the Key Dates and Deadlines page on the Graduate School website. These deadlines are well before the end of the semester - be sure to check and satisfy them.
- **Final Copy, both electronic and hard copies also have deadlines**, depending on the conferral date.

4.4 M.S. in Information Technology

4.4.1 Overview

The Master of Science in Information Technology is designed for current and aspiring professionals in charge of developing, implementing, operating, and managing information systems in a variety of organizations. Students in this program will gain a broad technical understanding of current and emerging technologies in the industry, a familiarity with systems engineering concepts, and a solid foundation in net-centric computing. They will also have a firm grasp of current and future effects of the convergence of the telecommunications, media, and information technology sectors.

4.4.2 Curriculum

A significant portion of the program is available online, and more courses are being added.

Features Common to all Programs

- See the [Masters Programs Prerequisites](#).
- Each program requires a total of 30 credit hours, generally 10 three-credit courses.
- Students can receive up to 6 credit hours (replacing two of our courses) for graduate work taken elsewhere: See the [transfer credit section of the Graduate Student Handbook](#) for details.
- **Students who have taken undergraduate Loyola classes:** Many 400-level courses in the department have closely related 300-level analogues, e.g. [COMP 443: Computer Networks](#) and [COMP 343: Introduction to Computer Networks](#). Students who enter the MS program after taking a Loyola course in this category must choose to take 400-level courses that are not closely related to any 300-level courses taken earlier, unless they have GPD permission.

Overall, to achieve depth and breadth, Information Technology students must complete the following:

- One (1) required course addressing ethical and social issues in the computing field.
- Three (3) courses within *one* of the following tracks: Enterprise Information Management, Technology Management, Information Assurance, or Enterprise Networking.
- Six (6) courses or 18 credits that do not need to be in any track. They can be any course in the general electives.

Note that you only need three courses in *some* track. There is no need to satisfy more than one track.

Major Requirements (3 credits)

- [COMP 417: Social, Legal, and Ethical Issues in Computing](#)

Tracks (9 credits)

- Three (3) courses from any *one* of the following Tracks must be taken.

Enterprise Information Management (EIM) Track

- COMP 453: Database Programming
- CSIS 494: Data Mining
- CSIS 796: Data Warehousing

Technology Management (TM) Track

- COMP 477: IT Project Management / CSIS 484: Project Management
- CSIS 483: Management of Service Operations
- CSIS 794: Managing Emerging Technologies
- CSIS 472: Organizational Change and Development

Information Assurance (IA) Track

- COMP 431: Cryptography
- COMP 443: Computer Networks
- COMP 447: Intrusion Detection and Computer Forensics
- COMP 448: Network Security
- COMP 449: Wireless Networks and Security

Enterprise Networking (EN) Track

- COMP 443: Computer Networks
- COMP 446: Telecommunications
- COMP 448: Network Security
- COMP 449: Wireless Networks and Security
- COMP 451: Network Management

General Electives (18 Credits)

The elective course options are common for all programs, differing only in the total number of credits required.

Electives can be any COMP 400 level class or any CSIS class (courses actually taught in the Business School).

Students may take up to a maximum of 6 credit hours of [COMP 490: Independent Project](#) and/or [COMP 499: Internship](#).

There are numerous options for independent study, including a programming project, research, or a service-oriented project.

4.5 M.S. in Software Engineering

4.5.1 Overview

The M.S. in Software Engineering caters to students interested in software engineering and also other contemporary topics of long-term value to the industry. Most early careers in the industry are based on either software development or managerial aspects of software development. This degree places more weight on software development. For those seeking a greater focus on managerial aspects, we offer the [M.S. in Information Technology](#).

4.5.2 Curriculum

This program is for students entering the program in Spring 2014 or later. If you were enrolled in the program prior to Spring 2014 you may use the older degree requirements located at [here](#).

Features Common to all Programs

- See the [Masters Programs Prerequisites](#).
- Each program requires a total of 30 credit hours, generally 10 three-credit courses.
- Students can receive up to 6 credit hours (replacing two of our courses) for graduate work taken elsewhere: See the [transfer credit section of the Graduate Student Handbook](#) for details.
- **Students who have taken undergraduate Loyola classes:** Many 400-level courses in the department have closely related 300-level analogues, e.g. [COMP 443: Computer Networks](#) and [COMP 343: Introduction to Computer Networks](#). Students who enter the MS program after taking a Loyola course in this category must choose to take 400-level courses that are not closely related to any 300-level courses taken earlier, unless they have GPD permission.

Overall, to achieve depth and breadth, Software Engineering students must complete the following:

- Two (2) required courses addressing ethical and social issues in the computing field and a firm base in object oriented programming.
- Three (3) courses from restricted categories to ensure a strong software engineering center, while still allowing a considerable flexibility of interests.
- Five (5) courses or 15 credits that are general electives.

Major Requirements (6 credits)

- [COMP 413: Intermediate Object-Oriented Development](#)
- [COMP 417: Social, Legal, and Ethical Issues in Computing](#)

Restricted Electives (9 credits)

MSSE students must take at least one course from the following Group 1 list:

Group 1

- [COMP 424: Client-Side Web Design](#)
- [COMP 433: Web Services Programming](#)
- [COMP 434: Enterprise Software Development](#)
- [COMP 437: Concurrent Programming](#)

- COMP 439: Distributed Systems
- COMP 442: Server-Side Software Development
- COMP 460: Algorithms and Complexity (exception to COMP 413: Intermediate Object-Oriented Development prereq)
- COMP 471: Programming Languages
- COMP 473: Object-Oriented Programming
- COMP 474: Software Engineering (exception to COMP 413: Intermediate Object-Oriented Development prereq)

Most of these Group 1 courses require COMP 413: Intermediate Object-Oriented Development as a prerequisite.

MSSE students must also take two additional courses from either the list above or the following Group 2 list:

Group 2

- COMP 410: Operating Systems
- COMP 420: Software Systems Analysis
- COMP 436: Markup Languages
- COMP 437: Concurrent Programming
- COMP 441: Human-Computer Interface Design
- COMP 453: Database Programming
- COMP 464: High-Performance Computing

If a student enters the program with an academic record of success in a course similar to COMP 413: Intermediate Object-Oriented Development, or if the student can demonstrate programming experience with the concepts of COMP 413: Intermediate Object-Oriented Development, then the Graduate Program Director may substitute for the COMP 413: Intermediate Object-Oriented Development requirement a course in Group 1 or 2 that has COMP 413: Intermediate Object-Oriented Development as a prerequisite.

The Computer Science department may declare that other courses (eg new courses and individual COMP 488: Topics in Computer Science offerings) may count as members of either Group 1 or Group 2.

General Electives (15 Credits)

The elective course options are common for all programs, differing only in the total number of credits required.

Electives can be any COMP 400 level class or any CSIS class (courses actually taught in the Business School).

Students may take up to a maximum of 6 credit hours of COMP 490: Independent Project and/or COMP 499: Internship.

There are numerous options for independent study, including a programming project, research, or a service-oriented project.

4.6 M.A. in Digital Humanities

The Computer Science department is a partner in the MA in Digital Humanities program. While not a department-specific program, we encourage students with interdisciplinary interests at the intersection of culture and technology to consider this degree, which allows one to elect courses from the CS department.

The Digital Humanities M.A. program at Loyola University's Center for Textual Studies and Digital Humanities (CTSDH) combines theoretical and practical courses. Its aims are ultimately practical and professional, training new digital specialists for the growing knowledge and information economy and today's research in humanities disciplines. Because the nature of much Digital Humanities work is constructive and project-based, students in the M.A. program will be given hands-on training in workshop or seminar-based classes, training in text editing and text encoding, electronic publishing and platforms, programming, interface design, project management, and archive construction. At every stage, team-based collaborative learning will be encouraged, in class projects, for example, and potentially in the required electronic thesis project. But the MA program also explores theoretical, critical, social, and ethical contexts for thinking about Digital Humanities research and applications, including issues of intellectual property, data and privacy, public access and preservation.

For details about this program, see <http://www.luc.edu/ctsdh/academics/maindigitalhumanities/>.

GRADUATE COURSES

For administrative information on course loads, registration, and course selection, please see the [Regulations Section](#) of the Graduate Student Handbook.

5.1 COMP 409: Advanced Numerical Analysis

5.1.1 Aliases

MATH 409: Advanced Numerical Analysis

5.1.2 Credit Hours

3

5.1.3 Prerequisites

MATH 212: Linear Algebra

MATH 264: Ordinary Differential Equations

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.1.4 Course Description

Introduction to error analysis, numerical solution of equations, interpolation and approximation, numerical differentiation and integration, matrices and solution of systems of equations, numerical solution of ordinary and partial differential equations.

5.1.5 Syllabi

No recent syllabi available.

5.2 COMP 410: Operating Systems

5.2.1 Credit Hours

3

5.2.2 Prerequisites

COMP 374: Introduction to Operating Systems

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.2.3 Description

This is a course in Operating Systems discussing both standalone and distributed environments. The focus of the course is to understand the underlying technologies that make contemporary operating systems work efficiently. We will discuss processes, threads, synchronization, I/O, file systems, memory management, transactions and system coordination techniques. Through this course we will discover how these technologies are integrated into the systems we use today and then utilize these technologies and apply them to practical applications.

This is NOT a programming intensive course, however, students will be expected to complete some programming in C with plenty of examples and assistance along the way. You certainly don't need to know how to program in C today. In addition, the completion of a technical paper on an OS related subject will also be expected.

Everyone currently in, or planning to enter the IT field should have a grasp on these components as they effect every area of the day to day operation of IT technology. Reference systems will include both Linux and Windows.

Since this course is an advanced study of Operating Systems, it is assumed that the student has already taken an undergraduate Operating System course. The course covers:

processes and threads (particularly the concepts of kernel threads, user threads, and lightweight processes); process and thread scheduling (time- sharing, real-time); file systems (including network file systems); communications (including RPC and sockets); synchronization (introducing mutexes and condition variables in addition to semaphores); Inter Process Communications (POSIX pipes, FIFOs, message queues, shared memory); security issues (including authentication and access control).

5.2.4 Syllabi

Semester/Year	Instructor	URL
Spring 2013	Joe Kaylor	http://osdi.cs.courseclouds.com
Spring 2012	Joe Kaylor and George K. Thiruvathukal	http://osdi.cs.courseclouds.com

5.3 COMP 411: Computer Systems Administration

5.3.1 Credit Hours

3

5.3.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.3.3 Description

System administration is an essential ingredient of modern computing practice. Knowledge of this topic can be helpful in managing a home computer network, a small business network, or enterprise systems. In addition, knowledge of system administration is a necessary aspect of experimental computing, including embedded software development, cluster computing, and distributed systems, where users often need to set up their own systems software. This course addresses the feneral principles of system administration focusing on contemporary operating systems such as Linux or Microsoft Windows.

5.3.4 Syllabi

No recent syllabi available.

5.4 COMP 412: Free/Open Source Computing

5.4.1 Credit Hours

3

5.4.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.4.3 Description

This course will cover the fundamentals of Free and Open Source software development. Topics to be addressed include licensing, Linux, typical software development tools (e.g. compilers, scripting languages, build tools, and version control software), applications, and techniques for managing remote servers. Students will work on a significant development project involving free and open-source software and learn how to participate in open-source projects effectively.

5.4.4 Syllabi

Semester/Year	Instructor	URL
Summer 2014	George K. Thiruvathukal	http://foss.etl.luc.edu
Spring 2014	Matt Butcher	https://drive.google.com/file/d/0B5gCiDnivRb5Ni15MlpialZJNzg/edit?usp=sharing

5.5 COMP 413: Intermediate Object-Oriented Development

5.5.1 Credit Hours

3

5.5.2 Prerequisites

COMP 271: Data Structures (strictly enforced)

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.5.3 Description

Object-orientation continues to be a dominant approach to software development. This intermediate programming-intensive course studies the use of classes and objects with an emphasis on collaboration among objects.

Overall Series of Object-Oriented Courses

- [COMP 170: Introduction to Object-Oriented Programming \(CS1\)](#) - simple objects representing scalars
- [COMP 271: Data Structures \(CS2\)](#) - collections of simple objects
- [COMP 313: Intermediate Object-Oriented Development](#) / [COMP 413: Intermediate Object-Oriented Development](#) - complex, interacting objects; basic design patterns
- [COMP 373: Objects, Frameworks, and Patterns](#) / [COMP 473: Object-Oriented Programming](#) - advanced design patterns and topics such as AOP(Aspect-Oriented programming)

[COMP 313: Intermediate Object-Oriented Development](#) / [COMP 413: Intermediate Object-Oriented Development](#) is also a prerequisite for other advanced software courses. Students interested in advanced software courses are encouraged to take [COMP 313: Intermediate Object-Oriented Development](#) / [COMP 413: Intermediate Object-Oriented Development](#) as soon as they have completed [COMP 271: Data Structures](#) so as to be eligible for these further courses.

Course Topics

- Data Structures of various types – linear vs. nonlinear, indexing vs. non-indexing, position vs. value-oriented
- Advanced Java, e.g. interfaces, annotations, exceptions, generics, collections, boxing/unboxing, array objects
- Object Modeling – UML, use cases and activity diagrams, class diagrams, archetypes, interaction diagrams
- Design by contract, interfaces, refactoring & generalization, design patterns (Adapter, Decorator, Composite, Strategy, Iterator, Abstract Factory, Visitor, ...)
- Agile Development Process – evolutionary design, test-driven development, refactoring, ...
- Tools – Eclipse, Subversion, JUnit, JMock, Ant, ...
- Techniques – object pooling, garbage collection, performance profiling (NetBeans)

5.5.4 Outcome

A thorough understanding of the principles of object-orientation: abstraction, delegation, inheritance, and polymorphism; exposure to basic design patterns; programming experience in mainstream object-oriented languages such as C++ and Java.

You will take your software development abilities to the next level by building on your knowledge of data structures.

You will learn to design and implement more complex programs using good software engineering practices, including:

- Designing with interfaces and composition
- Design patterns
- Refactoring
- Test-driven development (TDD)

5.5.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Dr. Yacobellis	https://drive.google.com/file/d/0B5gCIDnivRb5LWpEdndWZ2xTbE0/edit?usp=sharing
Fall 2013	Dr. Läufer	http://laufer.cs.luc.edu/teaching/313

5.6 COMP 417: Social, Legal, and Ethical Issues in Computing

5.6.1 Credit Hours

3

5.6.2 Prerequisites

None

5.6.3 Description

This course will explore a variety of ethical and legal issues facing those who use or program computers. Issues can be divided broadly into professional ethics, dealing with the ethical responsibilities of the programmer, and social issues, dealing with concerns we all have as citizens.

5.6.4 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Dr. Dordal	http://webpages.cs.luc.edu/~pld/courses/ethics/spr14/

5.7 COMP 418: Combinatorial Mathematics

5.7.1 Credit Hours

3

5.7.2 Prerequisites

MATH 162: Calculus II

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.7.3 Description

Combinatorics is a branch of mathematics with broad areas of application. There are important uses of combinatorics in computer science, operations research, probability, and statistics. Theoretical thermodynamics uses combinatorial theory to describe ideas such as entropy. Combinatorial analysis is a cornerstone of the study of error-correcting codes; these codes are used to transmit information from deep space or to protect the quality of music on compact discs. Our course will mainly focus on describing and/or counting complicated sets. Often questions which begin “How many ways can you...?” or “How many steps does it take to...?” are answered using combinatorial analysis. Such questions on the surface may appear rather uninteresting, but one can quickly get to questions that are quite engaging. What gambler wouldn’t want to understand the odds at winning a poker hand?

We plan to examine the following topics: permutations and combinations, the inclusion-exclusion principle and other general counting techniques, partitions, generating functions, recurrence relations, Burnside’s Theorem, the cycle index, and Polya’s formula. Other topics may be included as time permits. Emphasis will be on examples rather than theory.

This course is a combined undergraduate/graduate course. The requirements of the course for the graduate students will be different from the requirements for the undergraduates. The material should be comprehensible for any student who has completed MATH 162.

5.7.4 Other Information

Text: Applied Combinatorics, 4th edition, by Alan Tucker.

5.7.5 Syllabi

No recent syllabi available.

5.8 COMP 420: Software Systems Analysis

5.8.1 Credit Hours

3

5.8.2 Prerequisites

COMP 163: Discrete Structures and COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.8.3 Description

This course uses Unified Modeling Language notation to model the early software analysis and design phase. Object technology is critical to the understanding of the process of capturing business requirements and the course uses commercial software tools to perform systems analysis and design.

5.8.4 Syllabi

Semester/Year	Instructor	URL
Spring 2012	Dr. Honig	https://drive.google.com/file/d/0Bz_4VraMwHUoTHZONE84V2ROU2s/edit?usp=sharing

5.9 COMP 421: Mathematical Modeling and Simulation

5.9.1 Credit Hours

3

5.9.2 Prerequisites

MATH 215: Object Oriented Math Programming or COMP 215: Object-Oriented Programming with Mathematics or COMP 170: Introduction to Object-Oriented Programming

MATH 132: Applied Calculus II or MATH 162: Calculus II

STAT 203: Statistics

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.9.3 Description

The tool of simulation is probably the most useful tool for analyzing problems which arise in real applications which are much too complicated to be analyzed mathematically. One example is the study of inventory control policies. When should the inventory be checked? How many units should be ordered? What are the anticipated consequences of these decisions? We simulate the random character of the demand for the product and the delay in receiving orders of the product. The objective is to provide management with relevant information for constructing an acceptable inventory policy.

5.9.4 Syllabi

No recent syllabi available.

5.10 COMP 422: Software Development for Wireless/Mobile Devices

5.10.1 Credit Hours

3

5.10.2 Prerequisites

COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.10.3 Description

This course will focus on the unique challenges, methods, tools, and technologies for developing software applications for wireless and mobile devices, such as personal digital assistants (PDA) and smart mobile phones. Topics include user interface design for smallscreen, multi-channel devices, programming techniques and memory management for devices with limited memory and processing power, data synchronization for mobile databases, and wireless network programming.

5.10.4 Syllabi

Semester/Year	Instructor	URL
Spring 2009	Dr. Honig	https://drive.google.com/file/d/0Bz_4VraMwHUoSGdaOU9JS0VUTms/edit?usp=sharing

5.11 COMP 424: Client-Side Web Design

5.11.1 Credit Hours

3

5.11.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming

- **COMP 388: Foundations of Computer Science 2** is an accelerated version of **COMP 264: Introduction to Computer Systems** and **COMP 271: Data Structures**

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.11.3 Description

This course provides an in-depth study of the concepts and methods required for the design and implementation of the presentation layer of a web application. Topics include visual design, usability design, multi-channel and multi-modal applications, markup of static and dynamic content, content transformation, client-side executable content including client-side scripting and embedded applets, and web-based content management systems. Coursework includes several substantial programming projects (using technologies such as XHTML, XSTL, DHTML, JavaScript, PHP/ASP/JSP, Flash, and Zope/Plone).

5.11.4 Syllabi

Topic	Semester/Year	Instructor	URL
Client Side Web Design	Fall 2014	Dr. Albert	http://comp424.pacsites.org

5.12 COMP 428: Algebraic Coding Theory

5.12.1 Aliases

MATH 428: Algebraic Coding Theory

5.12.2 Credit Hours

3

5.12.3 Prerequisites

MATH 212: Linear Algebra

COMP 163: Discrete Structures or MATH 313: Abstract Algebra

All MS students are expected to have completed the undergraduate prerequisites:

- **COMP 388: Foundations of Computer Science 1** is an accelerated version of **COMP 163: Discrete Structures** and **COMP 170: Introduction to Object-Oriented Programming**
- **COMP 388: Foundations of Computer Science 2** is an accelerated version of **COMP 264: Introduction to Computer Systems** and **COMP 271: Data Structures**

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.12.4 Description

In this course, major types of error-correcting codes, encoding and decoding, and their main properties will be studied. The codes examined will include the Hamming, Golay, BCH, cyclic, quadratic residue, Reed-Solomon, and Reed-Muller codes.

5.12.5 Outcome

Students will learn both the theory and application of error-correcting codes.

5.12.6 Syllabi

No recent syllabi available.

5.13 COMP 431: Cryptography

5.13.1 Prerequisites

Mathematics (one of COMP 163: Discrete Structures, MATH 313: Abstract Algebra or MATH 201: Elementary Number Theory)

Programming (COMP 125: Visual Information Processing, COMP 170: Introduction to Object-Oriented Programming, COMP 215: Object-Oriented Programming with Mathematics, or equivalent).

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.13.2 Description

This course introduces the formal foundations of cryptography and also investigates some well-known standards and protocols. The intended audience is senior undergraduate and beginning graduate students. The course will include topics selected from the following: information-theoretic security, private key encryption, DES, public key encryption, background on modular arithmetic, RSA, hashing and message authentication codes (MACs), digital signatures, DSS, key distribution and management, PGP, network security, and Fiat-Shamir protocol.

5.13.3 Syllabi

Semester/Year	Instructor	URL
Fall 2013	Stephen Doty	https://drive.google.com/file/d/0B5gCIDnivRb5RVZfVDM4d3RadTg/edit?usp=sharing

5.14 COMP 433: Web Services Programming

5.14.1 Credit Hours

3

5.14.2 Prerequisites

- COMP 413: Intermediate Object-Oriented Development
- COMP 442: Server-Side Software Development (highly recommended)
- instructor permission if prerequisite is missing

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.14.3 Description

Web services are building blocks for enterprise applications that use open data exchange standards and transport protocols to exchange data with calling clients. This course studies the architectures, frameworks, and tools required to develop and compose web services and clients, as well as integrate service-oriented systems with legacy systems.

5.14.4 Syllabus

Offering	Instructor	URL
Fall 2012	Dr. Laufer	http://laufer.cs.luc.edu/teaching/433

5.15 COMP 434: Enterprise Software Development

5.15.1 Credit Hours

3

5.15.2 Prerequisites

COMP 271: Data Structures and COMP 313: Intermediate Object-Oriented Development

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming

- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.15.3 Description

The course shows how to use Enterprise JavaBeans to develop scalable, portable business systems. The technologies taught in the course include: component models, distributed objects, asynchronous messaging, and component transaction monitors. The course covers architecture of EJB, entity and message and session beans.

5.15.4 Syllabi

No recent syllabi available.

5.16 COMP 436: Markup Languages

5.16.1 Credit Hours

3

5.16.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.16.3 Description

This course covers Extensible Markup Language (XML) and its applications. This course will cover the core XML component frameworks, including XSLT (a transformational approach) and the various W3C specifications for manipulating XML documents programmatically, including the DOM and SAX frameworks. As well, this course will cover some advanced topics, including how to manage large XML documents and integration with databases. Please note that HTML will be occasionally used in this course; however, this course is not about HTML and students may want to acquire an HTML book and study it briefly before taking this course. This course is not about making cool web pages. The course has almost nothing to do with web pages and is focused more on modeling and the emergent notion of web services.

Students should expect the programming to be somewhat involved (intermediate to advanced). Most of the programming is based on straightforward data structures, such as trees, lists, and maps (collections found in Java). You are encouraged to study these topics on your own. Little time will be spent rehashing this preliminary knowledge.

5.16.4 Syllabus

Offering	Instructor	URL
Fall 2013	Matt Bone	http://markup.cs.courseclouds.com/fall2013/syllabus.html
Spring 2012	Dr. Thiruvathukal	http://markuplanguages.cs.courseclouds.com

5.17 COMP 437: Concurrent Programming

5.17.1 Credit Hours

3

5.17.2 Prerequisites

COMP 313: Intermediate Object-Oriented Development

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.17.3 Description

This course studies the architecture, design, and implementation of concurrent software systems. Process algebras, formal specification, and testing are used as tools in the engineering of concurrent systems; event-based programming frameworks and thread libraries are employed in the implementation of such systems. Coursework includes several substantial programming projects (in a language such as Java) involving applications of concurrency and event-driven programming such as graphical user interfaces and distributed services using Remote Method Invocation (RMI).

5.17.4 Syllabi

No recent syllabi available.

5.18 COMP 439: Distributed Systems

5.18.1 Credit Hours

3

5.18.2 Prerequisites

COMP 313: Intermediate Object-Oriented Development or COMP 374: Introduction to Operating Systems

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.18.3 Description

This course is designed as a modern discussion of distributed computing systems, which represent one of the most important areas in academic and business computing today. Topics covered include distributed computing, interactive services, collaborative computing, and peer-to-peer sharing.

Various distributed frameworks and technologies will be explored, e.g. DNS, CORBA, Java RMI, SOAP (XML-based RPCs), and Globus.

5.18.4 Syllabi

Semester/Year	Instructor	URL

5.19 COMP 441: Human-Computer Interface Design

5.19.1 Credit Hours

3

5.19.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.19.3 Description

This course studies the interaction between humans and computer-based systems. The course will provide students with the methods for evaluating, designing, and developing better interfaces between humans and systems. Students will acquire an awareness of different design and evaluation methods as well as practical, effective, and cost-conscious methods for improving systems and their interfaces.

5.19.4 Syllabi

Semester/Year	Instructor	URL
Spring 2013	Dr. Albert	http://mva.me/edu/hci/

5.20 COMP 442: Server-Side Software Development

5.20.1 Credit Hours

3

5.20.2 Prerequisites

COMP 264: Introduction to Computer Systems and COMP 313: Intermediate Object-Oriented Development

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.20.3 Description

This course studies the architecture, design, and implementation of multitiered server-based software systems. Each tier is studied along with the pertinent mechanisms: markup languages in the client tier, web application frameworks in the web tier, and server-side components in the business logic and persistence tiers. Pervasive issues such as integration, testing, security, and performance are discussed. Coursework includes several substantial programming projects (using a platform such as Java 2 Enterprise Edition).

5.21 COMP 443: Computer Networks

5.21.1 Credit Hours

3

5.21.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.21.3 Description

This course surveys the various levels of a packet-switched computer network, using the TCP/IP protocol suite as the primary model. Other network protocol stacks (e.g., Novell) may also be considered as time permits. At the Physical and Data Link Layers, various protocols such as Ethernet and Token Ring are compared, and their implications for network topology are considered. At the Network Layer, a wide variety of routing protocols and name resolution protocols are studied. At the Transport Layer, students are introduced to the various methods for building end-to-end reliability on top of less reliable lower layers. Finally, at the Application Layer a variety of standard protocols such as telnet, ftp, and electronic mail are examined, together with the related issues of security and authentication. Some programming in the C language is required.

5.22 COMP 446: Telecommunications

5.22.1 Credit Hours

3

5.22.2 Prerequisites

COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

5.22.3 Description

This course introduces the fundamental concepts of telecommunication networks. Underlying engineering principles of telephone networks, computer networks and integrated digital networks are discussed. Topics in the course include: telephone and data networks overview; OSI layers; data link protocol; flow control, congestion control, routing; local area networks (Ethernet, Token Ring and FDDI); transport.

5.22.4 Syllabi

Spring 2013	Dr. Dordal	http://webpages.cs.luc.edu/~pld/courses/346/spr13/

5.23 COMP 447: Intrusion Detection and Computer Forensics

5.23.1 Credit Hours

3

5.23.2 Prerequisites

COMP 150: Introduction to Computing or COMP 170: Introduction to Object-Oriented Programming

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.23.3 Description

This course will cover techniques for detecting the unusual usage patterns that typically signal a break-in. The course will also consider differences in detection of local intruders versus intrusion over networks. Finally issues in the prosecution of those breaking in to computers, particularly evidentiary issues are explored.

5.23.4 Outcome

Students will learn to configure ID systems (eg., snort) and analyze their output. They will also understand both network-based and host-based monitoring techniques.

5.23.5 Syllabi

Fall 2013	Corby Schmitz	https://drive.google.com/file/d/0B5gCIDnivRb5V1hQNW9FTVphV00/edit?usp=sharing

5.24 COMP 448: Network Security

5.24.1 Credit Hours

3

5.24.2 Prerequisites

COMP 264: Introduction to Computer Systems or COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.24.3 Description

This course will involve a discussion of the methods and tactics used to keep attackers at bay as well as the mechanisms by which we can identify and potentially stop potential “bad guys.” It will involve the following topics as they all relate to the overall security posture which makes computing safer: Encryption, authentication, firewalls, NAT/PAT, restricted access policies, intrusion detection and other security frameworks. The goal is to gain an understanding of how to secure computers and computing environments. Instructor permission is based on relevant industry experience with networking including TCP/IP.

Spring 2014	Corby Schmitz	https://drive.google.com/file/d/0B5gCIdnivRb5ZEdMTVZybHQ0U2s/edit?usp=sharing

5.25 COMP 449: Wireless Networks and Security

5.25.1 Credit Hours

3

5.25.2 Prerequisites

COMP 343: Introduction to Computer Networks or instructor permission

5.25.3 Description

In a mobile world, the ability to gain network access in a convenient manner, but yet securely, is becoming more and more of a requirement. This course will explore the wireless standards, authentication issues, common configuration models for commercial versus institution installs and analyze the security concerns associated with ad-hoc and standards-based methods of networking.

5.26 COMP 450: Microcomputer Design and Interfacing

5.26.1 Cross-Listing

Also Offered PHYS 366

5.26.2 Credit Hours

3

5.26.3 Prerequisites

COMP 264: Introduction to Computer Systems or PHYS 266

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.26.4 Description

This course includes lecture and laboratory work. Topics that the course will hit on are; Microprocessor logic, instruction, and clocked sequential circuits; memory devices; data acquisition, manipulation and transfer circuitry; machine and assembly languages; microprocessor support devices.

5.26.5 Syllabi

Semester/Year	Instructor	URL
Fall 2014	William Honig	http://cs.luc.edu/whonig/comp-366-488

5.27 COMP 451: Network Management

5.27.1 Credit Hours

3

5.27.2 Prerequisites

COMP 264: Introduction to Computer Systems or COMP 271: Data Structures

5.27.3 Description

Networks today are high-speed, heterogeneous, large-scale and delivers different media including data, audio and video. How do you effectively manage today's complex computer networks? This class provides complete yet accessible answers to network managers and researchers in this field. The course covers the basics of network management, alternative architectures, evaluation techniques, network management system components, SNMP and CMIP management protocols and the ISO network management applications: fault management, performance management, configuration management, security management, and accounting management. The course emphasizes the practical experience of developing network and distributed systems management tools using the SNMP++ and AdventNet wrappers. This course also highlights the latest advances in networks and distributed management area and shows case studies of academic and industrial systems such as HiFi, SMARRT, OpenView, NetView and Tivoli.

Class meets with INFS 793.

5.27.4 Outcome

Students will become familiar with the SNMP protocol, with how large-scale Network Management Systems operate and are configured, and with advanced network configuration.

5.27.5 Syllabi

Semester/Year	Instructor	URL
Spring 2011	Dr. Dordal	http://webpages.cs.luc.edu/~pld/courses/netmgmt/spr11/

5.28 COMP 453: Database Programming

5.28.1 Credit Hours

3

5.28.2 Prerequisites

COMP 251: Introduction to Database Systems or COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming

- **COMP 388: Foundations of Computer Science 2** is an accelerated version of **COMP 264: Introduction to Computer Systems** and **COMP 271: Data Structures**

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.28.3 Description

This course covers the fundamentals of database application development using C++, C, or Java by accessing a transaction-oriented database server. A commercial database environment such as Oracle is used. Apitonal topics may include enabling access to database via the web, and administering large databases.

5.28.4 Syllabi

5.29 COMP 460: Algorithms and Complexity

5.29.1 Credit Hours

3

5.29.2 Prerequisites

COMP 363: Design and Analysis of Computer Algorithms

5.29.3 Description

The design and analysis of algorithms is central to computer science. This course will focus both on presenting general techniques for designing correct and efficient algorithms, as well as on formal methods for proving the correctness and analyzing the complexity of such algorithms. Also included will be an introduction to the theory of NP-completeness, whereby certain computation problems can be classified as being difficult in a formal sense.

5.29.4 Syllabi

No recent syllabi available.

5.30 COMP 462: Computer Architecture

5.30.1 Credit Hours

3

5.30.2 Prerequisites

COMP 264: Introduction to Computer Systems or Comp 360 or comparable background, including but not limited to the following:

- Understanding of basic computer organization, including familiarity with such components as CPU, ALU, multiplexors, registers, main memory, caches, and buses
- familiarity with the roles of compilers, assemblers, and operating systems
- some familiarity with assembly language
- ability to understand simple C programs and to run programs in a UNIX environment, and
- familiarity with the representation of numbers in digital computers

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.30.3 Description

This course presents key principles underlying the design of modern digital computers. The course introduces quantitative techniques used to guide the design process. It describes CPU performance issues and introduces instruction set architectures. The course then uses a hypothetical computer design, with a simple RISC architecture, to show how modern digital computers are implemented, first using a simple non-pipelined implementation, followed by a higher-performance pipelined implementation. The major hazards introduced by pipelining, including structural hazards, data hazards, and control hazards are discussed and techniques for overcoming them are described. Additional topics covered in this course include the design of the memory hierarchy in modern digital computers, caching and virtual storage techniques, multiprocessor systems, and distributed shared memory systems.

5.30.4 Outcome

Students gain an understanding of the design of the memory hierarchy in modern digital computers, caching and virtual storage techniques, multiprocessor systems, and distributed shared memory systems.

5.30.5 Syllabi

No recent syllabi available.

5.31 COMP 464: High-Performance Computing

5.31.1 Credit Hours

3

5.31.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.31.3 Description

This course is motivated by the realization that cpu speeds are levelling off at between 3GHz and 5GHz. The need for programs to be faster and more efficient is all the more important at a time when applications are getting increasingly larger and more complex. We will introduce techniques to gain performance boost in Java programs and C++ (or C) programs by discussing the use of multiple processors. This course will use two kinds of hardware platforms we have in the department, two IBM symmetric multiprocessors with 4 CPUs each and 4 GB of memory and a cluster of AMD machines all running Linux. We will study shared memory (OpenMP), message passing (MPI) and hybrid models of programming the high-performance machines. This course will use a blend of foundational understanding as well as a set of practical tools to gain insight into performance engineering of software.

5.31.4 Syllabi

No recent syllabi available.

5.32 COMP 471: Programming Languages

5.32.1 Credit Hours

3

5.32.2 Prerequisites

COMP 413: Intermediate Object-Oriented Development

5.32.3 Description

There are over two thousand programming languages. This course studies several languages that represent the much smaller number of underlying principles and paradigms.

5.32.4 Outcome

An understanding of key principles and paradigms underlying the design and implementation of commonly used programming languages; exposure to formal mechanisms for describing language syntax and semantics; programming experience in several representative languages.

5.32.5 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Dr. Läufer	http://laufer.cs.luc.edu/teaching/372

5.33 COMP 472: Compiler Construction

This course covers the basics of writing a compiler to translate from a simple high-level language to machine code. Topics include lexical analysis, top-down and LR parsing, syntax-directed translation, and code generation and optimization. Students will write a small compiler.

5.33.1 Credit Hours

3

5.33.2 Prerequisites

COMP 264: Introduction to Computer Systems and COMP 313: Intermediate Object-Oriented Development

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.33.3 Description

This course covers the basics of writing a compiler to translate from a simple high-level language to machine code. Topics include lexical analysis, top-down and LR parsing, syntax-directed translation, and code generation and optimization. Students will write a small compiler.

5.33.4 Outcome

Students will learn the theory and practice of how to build a compiler.

5.33.5 Syllabi

No recent syllabi available.

5.34 COMP 473: Object-Oriented Programming

5.34.1 Credit Hours

3

5.34.2 Prerequisites

COMP 413: Intermediate Object-Oriented Development

You need to have knowledge of Java, C# or a similar object-oriented language, data structures, and fair sophistication with OOP - some experience with designing interacting, cooperating classes that would come in an intermediate discussion of software patterns. Software engineering is recommended but not required like the background listed above.

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.34.3 Description

Object-oriented programming has become the dominant software development paradigm of the 1990s. This course assumes familiarity with the main constituents of the object-oriented methodology:

- OOP = abstraction + inheritance + polymorphism

Building on this foundation, the course studies three major topics:

Design Patterns

First, the course discusses patterns, reusable solutions to recurring software design problems. Common design patterns such as Composite, Decorator, and Command typically involve several classes related by composition and inheritance.

Implementation

Next, the course examines how object-oriented language features such as composition, encapsulation, inheritance, and dynamic binding can be implemented. These features are studied in the context of an interpreter for a simplified object-oriented language.

Components

Finally, the course explores programming with reusable components. Specifically, the standard features of component architectures are discussed: properties, events, methods, and persistence, and introspection.

Other Information

This course is heavily project-oriented. Students study each major topic in the context of a substantial programming project. The reuse of existing class libraries and software components is emphasized. Grading will be based upon the following components: programming projects, quizzes, in-class exams, and the final exam.

5.34.4 Syllabi

Fall 2014	Berhane Zewdie	https://drive.google.com/file/d/0B5gCIDnivRb5RGZteWNnN0x4R0U/edit?usp=sharing

5.35 COMP 474: Software Engineering

5.35.1 Credit Hours

3

5.35.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.35.3 Description

Using an object-oriented language such as C++ or Java, the student (working in a small team) will learn to plan, design, implement, and test a large software project.

5.35.4 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Dr. Honig	https://drive.google.com/file/d/0B5gCIDnivRb5MXEwQXIwTThkYXc/edit?usp=sharing

5.36 COMP 475: System Standards and Requirements

5.36.1 Credit Hours

3

5.36.2 Prerequisites

None

All MS students are expected to have completed the undergraduate prerequisites:

- [COMP 388: Foundations of Computer Science 1](#) is an accelerated version of [COMP 163: Discrete Structures](#) and [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 388: Foundations of Computer Science 2](#) is an accelerated version of [COMP 264: Introduction to Computer Systems](#) and [COMP 271: Data Structures](#)

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.36.3 Description

Introduction to the standards creation processes used by the computing and communications industry to generate technical and product standards. These standards influence world-wide growth of technology and often determine market success of companies. The course covers the structure and purpose of key formal and ad hoc standards groups across the world, explores the steps from the recognition of the need to the formal standard approval, introduces the processes, mechanisms, and technologies used to create standards, and gives special emphasis to the impact of the Open Source movement on software standards.

5.36.4 Syllabi

No recent syllabi available.

5.37 COMP 476: Formal Languages and Automata

5.37.1 Credit Hours

3

5.37.2 Prerequisites

[COMP 163: Discrete Structures](#) or [MATH 201: Elementary Number Theory](#) or [MATH 212: Linear Algebra](#)

All MS students are expected to have completed the undergraduate prerequisites:

- [COMP 388: Foundations of Computer Science 1](#) is an accelerated version of [COMP 163: Discrete Structures](#) and [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 388: Foundations of Computer Science 2](#) is an accelerated version of [COMP 264: Introduction to Computer Systems](#) and [COMP 271: Data Structures](#)

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.37.3 Description

This course will study three mutually related topics: languages, machines, and computability. The mathematical ideas developed in this course are useful in many areas of computer science, including the design and specification of programming languages, construction of compilers, and exploring the capabilities and limitations of mechanical computation. This subject is important for the scientific foundations it lays for computer science, for the philosophical concerns it raises about the nature of computation, and for the sheer elegance it brings in to the studies related to a variety of applications. Some of the most fundamental discoveries in computer science identify connections among languages, machines, and computability. Furthermore, some of the most challenging questions at the heart of computer science also arise from these topics. The course will cover a majority of the following topics: regular languages, finite automata, determinism and nondeterminism in finite automata, applications to searching and pattern matching, context-free languages, push-down automata, applications to compiler design, computability theory, Church-Turing thesis, Turing machines, undecidability, recursive and recursively enumerable languages, reductions among languages, resource-bounded computation, Kolmogorov complexity.

5.37.4 Syllabi

No recent syllabi available.

5.38 COMP 477: IT Project Management

5.38.1 Credit Hours

3

5.38.2 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.38.3 Description

This course is an introduction to the philosophy and practice of project management. The course involves a student group project to investigate and plan a “real world” project. The investigation requires application of project-management tools covered in the class, including a project proposal that specifies project objectives, schedules, work breakdown structure, and responsibilities, an written interim report, and a final oral and written report. The course will likely include both business and computer science students working together on a student team.

5.38.4 Syllabi

Semester/Year	Instructor	URL
Spring 2014	Conrad Weisert	http://webpages.cs.luc.edu/~cweisert/COMP477/syllabus.html

5.39 COMP 480: Computer Graphics

5.39.1 Credit Hours

3

5.39.2 Prerequisites

COMP 271: Data Structures

The requirements for the course are some familiarity with C or C++, basic linear algebra (matrices and vector geometry), and differential calculus.

All MS students are expected to have completed the undergraduate prerequisites:

- **COMP 388: Foundations of Computer Science 1** is an accelerated version of **COMP 163: Discrete Structures** and **COMP 170: Introduction to Object-Oriented Programming**
- **COMP 388: Foundations of Computer Science 2** is an accelerated version of **COMP 264: Introduction to Computer Systems** and **COMP 271: Data Structures**

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.39.3 Description

Computer graphics is the art and science of producing images using a computer. We will study the theory of computer graphics, in particular 3D rendering, while gaining a working knowledge of the OpenGL graphics library. Much of the computer graphics we see in the media was created using software based on the Open GL graphics library, which has quickly become an industry standard.

A word of warning-computer graphics makes considerable use of mathematics- elementary linear algebra, vector analysis and differential calculus.

5.39.4 Other Information

There will be 7-8 programming assignments, a midterm, and a final. You will probably do your assignments using Visual C++ under either Windows 95 or Windows NT.

5.39.5 Syllabi

No recent syllabi available.

5.40 COMP 484: Artificial Intelligence

5.40.1 Prerequisites

COMP 271: Data Structures

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.40.2 Description

This course provides an introduction into the field of artificial intelligence (AI). Topics include search, game-playing, logic, planning, uncertainty, learning, and perception, as time permits.

5.40.3 Other Information

There will be a midterm and final exam and some programming assignments.

5.40.4 Syllabi

No recent syllabi available.

5.41 COMP 488: Topics in Computer Science

5.41.1 Credit Hours

3

5.41.2 Prerequisites

Department consent

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

5.41.3 Description

This course is used to introduce emerging topics in computer science that do not yet have a regular course number. Content of the course varies. Recent topics have included

- Bioinformatics
- Computational Biology
- Computational Neuroscience
- Enterprise Software Development
- Introduction to Digital Humanities Design and Programming
- Machine Learning
- Metagenomics
- Rapid Application Development Methodology (.NET)
- Robotics Software Development

5.41.4 Outcome

Understand an emerging area of Computer Science.

5.42 COMP 490: Independent Project

5.42.1 Credit Hours

Variable (1-6)

5.42.2 Prerequisites

Previous agreement of a Computer Science faculty supervisor

5.42.3 Description

An independent project in computer science or related disciplines, under the supervision of a member of faculty.

Students may not register themselves. A request with the exact semester and number of units must be forwarded by the faculty supervisor, after an agreement is made with the student.

A good feature of an independent project is that you can make your transcript show a course title that is specific to your particular project. Fill out the [Request for Course Title form](#), and get the signature of your supervisor and the gpd. More information can be found in the [Graduate Program Handbook](#).

5.43 COMP 499: Internship

5.43.1 Credit Hours

Variable (1-6)

5.43.2 Prerequisites

Agreement of the Graduate Program Director (GPD)

5.43.3 Description

An opportunity to obtain experience in software development, design, networks, or related activities in computer science in a professional setting. The student must obtain the approval of the Graduate Program Director and the student's work supervisor. A final report from the student and the supervisor are required. More information can be found in the [Graduate Program Handbook](#).

5.44 COMP 605: Master of Science Study

5.44.1 Credit Hours

0

5.44.2 Prerequisites

Must be a Student in the M.S. Computer Science Program and doing the Thesis Option.

5.44.3 Description

This course is only for students who are actively working on their thesis, but not taking enough regular courses to be full-time. Enrolling in this course will give you full-time student status.

MS IT GRADUATE COURSES/QUINLAN BUSINESS SCHOOL

6.1 CSIS 472: Organizational Change and Development

6.1.1 Credit Hours

3

6.1.2 Aliases

MGMT 472 (Quinlan School of Business)

6.1.3 Prerequisites

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

6.1.4 Description

This course explores the complexity and dynamics of change in organizations. It considers the implications of different types of change and different change intervention techniques. Special topics covered include managing resistance to change, organization development, and change leadership. Students are given the opportunity to apply intervention strategies for change in individual, group, and organizational situations.

6.1.5 Syllabi

No recent syllabi available.

6.2 CSIS 483: Management of Service Operations

6.2.1 Credit Hours

3

6.2.2 Aliases

OPMG 483 (Quinlan School of Business)

6.2.3 Prerequisites

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

6.2.4 Description

The application of operations management concepts and techniques in service- sector organizations. Consideration is given to the design, production, and delivery of quality services as well as to development of effective service systems. Services treated may include health care, transportation, finance, wholesale and retail trade, government, communications, recreation, education, lodging, food service, and utilities.

6.2.5 Syllabi

No recent syllabi available.

6.3 CSIS 484: Project Management

6.3.1 Credit Hours

3

6.3.2 Aliases

ISOM 484 (Quinlan School of Business)

6.3.3 Prerequisites

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

6.3.4 Description

The art and science of project management as applied to a variety of large and small project situations, in commercial, public, and private sectors. Coverage includes project life cycle management, project organization and leadership, proposals and contracts, and techniques for project planning, estimating, scheduling, and control.

6.3.5 Syllabi

No recent syllabi available.

6.4 CSIS 494: Data Mining

6.4.1 Credit Hours

3

6.4.2 Aliases

INFS 494 (Quinlan School of Business)

6.4.3 Prerequisites

COMP 271: Data Structures and COMP 353: Database Programming and *a background in statistics* as in ISOM 491

All MS students are expected to have completed the undergraduate prerequisites:

- COMP 388: Foundations of Computer Science 1 is an accelerated version of COMP 163: Discrete Structures and COMP 170: Introduction to Object-Oriented Programming
- COMP 388: Foundations of Computer Science 2 is an accelerated version of COMP 264: Introduction to Computer Systems and COMP 271: Data Structures

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

6.4.4 Description

The goal of the course is to introduce students to the current theories, practices, tools and techniques in data mining. Because many topics and concepts in data mining are learned most efficiently through hands-on work with data sets, we will spend time with software analyzing and mining data. The goal is to gain a better understanding of how data mining is applied and what is involved in data mining projects.

Course Objectives and Learning Outcomes

At the end of the course students will be able to:

- Explain how businesses can gain competitive advantage through the mining of data.
- Describe when and how various data mining techniques should be applied.
- Understand the basic process and mechanics of data mining.
- Be able to make strategic recommendations based on data mining results.
- Execute basic data mining techniques using IBM's SPSS Modeler and interpret the result

6.4.5 Syllabi

Dr. Mary Malliaris Fall 2014 (INFS 494)

6.5 CSIS 496: Systems Analysis and Design

6.5.1 Credit Hours

3

6.5.2 Aliases

INFS 496 (Quinlan School of Business)

6.5.3 Prerequisites

All MS students are expected to have completed the undergraduate prerequisites:

- [COMP 388: Foundations of Computer Science 1](#) is an accelerated version of [COMP 163: Discrete Structures](#) and [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 388: Foundations of Computer Science 2](#) is an accelerated version of [COMP 264: Introduction to Computer Systems](#) and [COMP 271: Data Structures](#)

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

6.5.4 Description

Provides a core set of skills for planning, managing and executing systems analysis and design processes in e-business and Web-based environments. Topics typically include project initiation and planning, methods used in the determination of information requirements, prototyping, techniques used in systems design, testing and implementation strategies.

6.5.5 Syllabi

No recent syllabi available.

6.6 CSIS 794: Managing Emerging Technologies

6.6.1 Credit Hours

3

6.6.2 Aliases

INFS 794

6.6.3 Prerequisites

All MS students are expected to have completed the undergraduate prerequisites:

- [COMP 388: Foundations of Computer Science 1](#) is an accelerated version of [COMP 163: Discrete Structures](#) and [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 388: Foundations of Computer Science 2](#) is an accelerated version of [COMP 264: Introduction to Computer Systems](#) and [COMP 271: Data Structures](#)

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

6.6.4 Description

This course will discuss issues related to the creation, acquisition, and leveraging of emerging information technologies for competitive advantage. Guest speakers will discuss the challenges of managing state-of-the-art technologies in their firms. The role of information technology infrastructures, conditions that facilitate innovation development, and links between technology and strategic planning are presented.

This course is offered by the Quinlan Business School.

6.6.5 Syllabi

No recent syllabi available.

6.7 CSIS 796: Data Warehousing

6.7.1 Credit Hours

3

6.7.2 Aliases

INFS 796

6.7.3 Prerequisites

INFS 492 / ISOM 492

All MS students are expected to have completed the undergraduate prerequisites:

- [COMP 388: Foundations of Computer Science 1](#) is an accelerated version of [COMP 163: Discrete Structures](#) and [COMP 170: Introduction to Object-Oriented Programming](#)
- [COMP 388: Foundations of Computer Science 2](#) is an accelerated version of [COMP 264: Introduction to Computer Systems](#) and [COMP 271: Data Structures](#)

Please note that MS IT students are expected to complete *all* prerequisites before taking any course in CS or the Quinlan School of Business. (This includes any additional prerequisites required by Quinlan.)

6.7.4 Description

In the Data Warehousing course, students will learn how data warehouses are used to help managers successfully gather, analyze, understand and act on information stored in data warehouses. The components and design issues related to data warehouses and business intelligence techniques for extracting meaningful information from data warehouses are emphasized. Oracle tools will be used to demonstrate design, implementation, and utilization issues.

Class meets with INFS 796.

6.7.5 Syllabi

No recent syllabi available.

DOWNLOADING

7.1 Download Other Formats

In addition to the html version on the server, <http://courses.cs.luc.edu/html>, we also provide the following formats for offline reading:

- [PDF](#) for printing or sequential desktop reading
- [ePub](#) (for e-reading devices, e.g. e-readers, tablets, or Adobe Digital Editions on desktop)

All these different formats are generated using the incredible [Sphinx](#) documentation tools from the [Python](#) community.

You can view the source text files from which all versions are derived at <https://bitbucket.org/loyolachicagocs/coursedescriptions>. The site also shows a change log.

genindex

A

acm programming team, 101
 advanced numerical analysis, 153
 algebraic coding, 106, 162
 algebraic coding theory, 106, 162
 algorithms, 121, 174
 algorithms and complexity, 174
 artificial intelligence, 128, 182

B

b.s. / m.s. dual degree programs, 80
 b.s. in bioinformatics, 69
 b.s. in communication networks and security, 69
 b.s. in computer science, 71
 b.s. in information technology, 76
 b.s. in mathematics and computer science, 73
 b.s. in physics and computer science, 74
 b.s. in software engineering, 78
 bioinformatics, 69, 130
 broadening participation in STEM (computing math and science), 135

C

client-side web design, 105, 161
 combinatorial mathematics, 158
 communication networks and security, 69
